Gainesville, FL, 32606 | +1 352 218 1222

Senior Frontend Engineer with 7+ years of experience designing, building, and leading the delivery of sophisticated web applications across diverse environments, from Meta's large-scale platforms (WhatsApp, Ads) to dynamic agency environment (Wolf Carries) and enterprise SaaS (InfoTech). Proven ability to architect performant, accessible, and scalable UIs using React, Next.js, and TypeScript, seamlessly integrating with various backends (GraphQL, tRPC, REST) and cutting-edge technologies like AI/LLMs, WebRTC, and blockchain analytics. Adept at translating complex requirements into user-centric solutions that drive engagement and business value.

Work Experience

Senior Frontend Engineer

Nov 2021 - Present

Wolf Carries, LLC | Remote

- Led the end-to-end frontend development and architecture for key agency client platforms, including Taostats (Bittensor blockchain explorer/analytics) and YoloHealth (telehealth/wellness platform).
- Architected scalable and performant frontends using Next.js and TypeScript, optimizing for SEO (Taostats) and efficient handling of large datasets.
- Designed and implemented advanced state management solutions using Jotai (Taostats) to minimize re-renders and enhance application performance.
- Translated complex Figma designs into pixel-perfect, reusable React components using Tailwind CSS and ShadCN, ensuring design fidelity and maintainability (YoloHealth).
- Engineered engaging user interactions, incorporating real-time data updates via WebRTC/MQTT (Taostats) and sophisticated scroll-based animations using GSAP (Viggle AI).
- Overhauled complex data visualizations by migrating D3.js charts to Airbnb's Visx library, significantly improving performance and interactivity (Taostats).
- Championed and enforced web accessibility standards (WCAG 2.1) through code reviews, direct implementation, and team guidance.
- Integrated frontend applications seamlessly with backend services using GraphQL, tRPC (with Prisma), and Django REST framework APIs.
- Developed user interfaces for interacting with various Generative AI models (Kling 2.0, Pika) and integrated AI chatbots using LLMs (OpenAI) (Viggle AI, YoloHealth).
- Implemented robust security practices on the frontend, including input validation and secure token handling, complementing backend security measures like 2FA.
- Utilized AI code editors (Cursor, WindSurf) and modern tooling to boost development velocity and efficiency.
- Skills: React.js, Next.js, TypeScript, JavaScript, Node.js, Python (Django), GraphQL, tRPC, Prisma, TypeORM, Supabase, PostgreSQL, WebRTC, MQTT, Socket.io, GSAP, Visx, D3.js, Tailwind CSS, ShadCN, Jotai, HTML5, CSS3, Jest, React Testing Library, WCAG, AWS (EC2, CloudWatch, Serverless), LLMs (OpenAI), Figma, Git.

Frontend Software Engineer

May 2019 - Oct 2021

Meta | Remote, USA

- Developed and maintained user-facing features and core UI infrastructure across multiple high-impact Meta products, including WhatsApp Web, Ads platforms, Business Messaging tools, and

internal systems.

- Architected and implemented key consumer and business features for WhatsApp Web using React, TypeScript, and modern JavaScript, focusing on delivering optimal user experiences and performance at scale.
- Led the successful migration of the WhatsApp Web testing infrastructure to React Testing Library, significantly improving test reliability and developer velocity; conducted training sessions for 20+ engineers on best practices.
- Integrated complex, cross-platform UI flows (Web, iOS, Android) for critical compliance initiatives, such as the EMEA ad opt-out settings, utilizing internal frameworks like Bloks alongside React and GraphQL.
- Enhanced the UI/UX of the Ads Profile Center and Ads Feed Subscription service, driving frontend test coverage from ~15% to over 90% using Jest and React Testing Library.
- Contributed to the core Facebook Design System, focusing on improving component accessibility (ADA compliance) through semantic HTML, ARIA attributes, Style X, and ensuring robust color contrast ratios in collaboration with design engineers.
- Developed and refactored UI components for internal platforms, including a privacy risk management tool and the WhatsApp API onboarding flow, based on UX research and stakeholder requirements.
- Utilized GraphQL extensively to fetch and manage data for complex frontend interfaces across various applications.
- Skills: React.js (incl. Hooks, React 18), TypeScript, JavaScript (ES6+), GraphQL, HTML5, CSS3, Jest, React Testing Library, Style X, Bloks, PHP/Hack (for integrations), Accessibility (ADA/WCAG).

Web Developer

May 2017 - May 2019

InfoTech | Gainesville, FL

Contributed to the development and enhancement of key enterprise SaaS platforms including BidExpress.com (bidding platform with thousands of users, billions in bids), DocExpress.com (document workflow SaaS with thousands MAU, millions of documents), and Estimator (data analysis tools).

- Developed responsive and accessible user interfaces for multiple projects using Vue.js and React, focusing on modern UI design principles.
- Architected and implemented a complex in-browser PDF Editor from the ground up, significantly enhancing document interaction capabilities within DocExpress.com.
- Engineered a critical security upgrade for BidExpress.com, modernizing bid encryption and security protocols using Vue.js, TypeScript, PKI.js, and WebCrypto APIs.
- Designed and built a new GraphQL API to improve data fetching efficiency and provide a modern alternative to legacy APIs.
- Led the initiative to integrate an OCR solution for document search within DocExpress.com, improving core product functionality through an innovation project.
- Implemented interactive front-end features for data analysis visualization within the Estimator tool.
- Ensured consistent adherence to WCAG accessibility standards across all developed web pages and components.
- Created and maintained a shareable UI component library using Docker and npm, promoting code reuse and streamlining development workflows.
- Established rigorous unit and end-to-end testing practices using Jest and Cypress, maintaining high code coverage and application performance.
- Collaborated closely with Business Analysts and Product Owners in agile sprints to refine requirements, inform design decisions, and plan development tasks.
- Skills: Vue.js (Vue 2), Nuxt.js, React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, GraphQL, REST APIs, Node.js (implied by npm/GraphQL), PKI.js, WebCrypto API, Jest, Cypress, Docker, npm, Git, AWS S3, EC2, UI/UX Design Principles, Web Accessibility (WCAG).

Projects

Taostats

Apr 2022 - Present

Taostats is a comprehensive Block Explorer and Analytics Platform specifically designed for the Bittensor network, providing users with insights into blockchain activity, network statistics, and real-time data updates.

I led the end-to-end frontend development for Taostats, architecting the platform using Next.js and TypeScript for optimal SEO, performance, and efficient data handling. Key contributions included implementing performant state management with Jotai, enabling real-time data feeds using WebRTC/MQTT, overhauling data visualizations with Visx for improved user interaction, and integrating modern API layers (GraphQL/tRPC) to enhance communication speed and overall system responsiveness. My focus extended to ensuring robust security measures and optimizing performance through techniques like virtualization and memoization.

YoloHealth

Nov 2021 - Sep 2022

YoloHealth is an innovative telehealth platform dedicated to metabolic wellness and weight management, integrating virtual consultations, AI-driven meal planning, and an active social community for user support and engagement.

I spearheaded the frontend development using Next.js, TypeScript, and Tailwind CSS, translating Figma designs into pixel-perfect, reusable components and ensuring a seamless user experience. My work involved implementing core functionalities like AI chatbots leveraging LLMs, enabling video conferencing via Socket.io on AWS, building the social community features, and collaborating closely with the backend team to integrate APIs using tRPC and GraphQL for fluid data communication.

Core Skills

Next.js, React, JavaScript, TypeScript, Tailwind CSS, DaisyUI, ShadCN, Chakra UI, Material UI, Sass/SCSS, Styled components, Redux, RTK, Zustand, Jotai, CloudScape, AWS, D3.js, Visix, React Native, RadixUI, SEO, SSR, React Server Components, HTMX, GraphQL, tRPC, gRPC, Prisma, T3, Jest, Cypress, Mocha, Storybook, Vite, Astro, Figma, Web Accessibilities, WCAG, API Integration, UX, Performance Optimization, Responsive Design, Service Workers, Python, Animation, Framer Motion, GSAP, WebGL, Three.js, Shader, AI, Cursor, WindSurf, REST API, JSON, Gen AI, Open AI

Education

Saint Leo University

Apr 2013 - Apr 2017

Master's degree Computer Engineering

University of Florida

Apr 2009 - Mar 2013

Bachelor's degree Computer Engineering
