

DUC H. NGUYEN

Bellevue, WA | duc.nguyen.se@gmail.com | 408.505.2751 | www.linkedin.com/in/duchoangnguyen

Professional Summary

Experienced Full-stack Software Engineer with experience in cloud-native architecture, microservices and DevOps **automation**. Skilled in designing and developing scalable systems, contributions to telemetry platforms, API ecosystems, and high-availability environments and modern web technologies. Worked in high-impact roles across diverse industries including automotive, technology and retail.

Technical Skills

- Languages: C#, .NET Core, Java, **Python**, PowerShell, Node.js, T-SQL
- Cloud: Azure (AKS, App Services, APIM, Azure Functions, Logic Apps, Service Fabric, Event Hub), AWS
- DevOps & infrastructure: Azure DevOps, Terraform, ArgoCD (GitOps), Docker, Kubernetes, Red Hat OpenShift, Git, CI/CD pipelines, YAML, ARM templates,
- Architecture: Microservices, RESTful APIs, OAuth2, Event-driven architecture, Kafka, Service Bus
- Database: Cosmos DB, Redis, PostgreSQL, SQL Server, SQLite.
- Observability & Monitoring: Grafana, Azure Monitor, Prometheus, SonarQube
- **Automation** & Scripting: PowerShell, Bash, Prompt Engineering
- Testing: MSTest, NUnit, XUnit, JUnit, Selenium, JMeter
- Development Practices: OOD, TDD, SDLC, Agile, **Infrastructure as Code** (IaC), Secure DevOps

Professional Experience

Sr. Software Engineer – Cariad, Inc (Volkswagen Automotive Cloud, LLC) | Redmond, WA | FTE

April 2020 – June 2025

- Engineered cloud-native integration pipelines for ingesting and processing high-volume vehicle telemetry using C# .NET 8, **Python**, Azure Function Apps, and Logic Apps, with seamless data flow across Cosmos DB, PostgreSQL, and Databricks for real-time analytics and durable storage.
- Led Infrastructure-as-Code (IaC) efforts using Terraform, ARM templates, and GitOps workflows with ArgoCD and Azure DevOps, ensuring full environment parity and automated, reliable deployments across dev, staging, and production.
- Built containerized microservices using Docker and Kubernetes (AKS), incorporating auto-scaling, and rolling deployments to support high availability with minimal downtime.
- Collaborated with engineering teams to resolve cloud-to-vehicle signal latency and transmission bottlenecks using optimized Kafka pipelines, Azure Event Hub, and Redis caching.
- Implemented real-time dashboards and alerts using Grafana, Prometheus, and Azure Monitor, reducing MTTR and improving observability for cloud-based microservices, reduced incident resolution time by 50%.
- Built internal developer portals using React.js, TypeScript including OAuth2 & Auth0 integrated onboarding platform, reducing operational overhead and support requests.
- Maintained code quality, compliance, environment validation, enhancing deployment confidence and developer velocity through Azure DevOps CI/CD pipelines, SonarQube, and Git version control across hybrid cloud environments including AKS, OpenShift, and AWS.

Software Development Engineer – Microsoft | Redmond, WA | Contract

April 2019 – Dec 2019

- Developed a real-time voice assistant .NET Core web application integrated with MS Dynamics 365, enabling intelligent call routing and advanced assistant features.
- Built webhook APIs using Node.js and RESTful Web API, integrated with Azure Event Grid to support event-driven workflows and inter-team communication.
- Designed and implemented front-end components using React JS, Fabric UI, Typescript and Axios delivering a responsive and modern user interface.
- Integrated Azure Function Apps and published APIs through Azure API Management (APIM) for scalable and secure service orchestration.
- Managed CI/CD pipelines with Azure DevOps, resolved deployment issues across environments, authored and maintained System Design Specifications for consistent documentation, and ensured code quality through Git version control and Enzyme front-end testing.

Software Development Engineer – Microsoft | Redmond, WA | Contract

Dec 2018 – March, 2019

- Developed secure and scalable RESTful Web APIs using C# and .NET Core 2.0 to support Microsoft's School Data Sync (SDS) system, enabling robust data validation and integration.

- Designed and implemented custom APIs to enable seamless interoperability within the SDS platform, utilizing Azure API Management (APIM) and OAuth 2.0 for secure access and integration. Extended platform functionality by integrating Azure Logic Apps and Function Apps to support complex, event-driven workflows.
- Automated infrastructure provisioning with Azure Resource Manager (ARM) templates, streamlining deployments and improving environment consistency.
- Performed high-volume data manipulation and migration in Cosmos DB using T-SQL, and Scope Studio, ensuring accuracy and performance across structured datasets.
- Employed Azure DevOps and CI/CD pipelines, version control with Git, and test **automation** with MSTest, improving build reliability and delivery speed.

Sr. Software Engineer – Savers | Renton, WA | Contract

November 2015 – November 2018

- Designed, developed, and maintained a comprehensive sales system using Angular, .NET Core, Java, Electron and SQL Server supporting internal and external web applications, mobile apps, RESTful and SOAP APIs, microservices, and desktop clients.
- Managed the Supply Product system, collaborating directly with customers to gather requirements and resolve production issues. Ensured reliability and high user satisfaction by leveraging MVC, .NET Framework, and Azure Portal for deployment and monitoring.
- Built responsive and user-friendly interfaces with Angular, HTML, CSS, JavaScript, jQuery, and Bootstrap, enhancing usability across platforms.
- Integrated third-party systems and internal services using Web API, MuleSoft, and Node.js, facilitating smooth data flow and interoperability.

Software Development Engineer – Microsoft | Bellevue, WA | Contract

April 2015 – September 2015

- Developed a Project Management application using MVC 5, .NET Framework 4.5.1, and Entity Framework 6.1. Enhanced the Business Process Management module by migrating components to support localization and implementing a seamless language-switching user interface. Using React JS, JavaScript, jQuery, HTML, SQL Server to deliver dynamic and responsive front-end functionality.
- Leveraging caching mechanisms improving module management performance by 20%.
- Designed and implemented a testing framework with Selenium, creating and maintaining unit and **automation** test cases to ensure application quality, integrated with TFS for version control and OAuth 2.0 for secure authentication.

Education

- Master of Science in Analytics, Harrisburg University, PA (2018–2020)
- Master of Science in Computer Science, Maharishi International University, IA (2014–2017)
- Bachelor of Software Engineering, FPT University, Vietnam (2009–2012)
