

SUMMARY OF QUALIFICATION

- **18 + yrs.** As a seasoned **Program/Project Manager/Release Train Engineer, Scrum Master** I managed complex and highly visible projects.
- Implemented Application Development, Data Center, Network Infrastructure, Data Warehouse, Azure and AWS Cloud, SAP ECC 6, SAP Business Intelligence
- Extended technical support to the Enterprise IT PMO by embedding processes and procedures within technical IT delivery teams.
- Developed, reviewed, and distributed templates and tools to guarantee process alignment.
- Initiated formal/informal coaching and mentorship to 50+ team members regarding project charter development, resource planning, project management best practices, and appropriate delivery of project outcomes.
- Streamlined project management methodologies and communication in the IT division, which increased efficiency.
- Provide accurate reporting on project status throughout its life cycle to 20+ project team members, stakeholders, and sponsors encompassing budget estimation, scheduling, and resource planning as part of the IT division's policies.
- Expertise in preparing launching and Executing Agile Trains by training, coaching and execution of Safe Agile Methodology and Best Engineering Practices
- As a Release Train Engineer managed Agile Release Train (ART) with team size of 60 – 70 people.
- Proven experience in adopting key engineering practices like Continuous Integration, DevOps, Kanban etc. to improve quality and reliability of team's deliverable using Scaled Agile Framework.
- Proven track record in building and running highly effective Agile Release Train (ART) for diverse, multi-national top companies from scratch.
- Lead the engagement in transforming from Waterfall to Scaled Agile, started from scratch and matured the teams to the level that was adopted and followed by many divisions.
- Hold the Release Train end to end all dependencies between scrum teams (Scrum of Scrum) and external dependencies are closely monitored and tracked.
- Created and delivered executive level presentations on project and portfolio details, to include progress, issues, risks, financials, recommendations, and other metrics as required.
- Held review meetings to monitor progress of the project as per schedule/budgets, provide delivery oversight, and ensure timely completion and delivery of the project to sponsor.
- Maintain the burn rate for the project and provide the financial number to customer and recommend on best utilization of the money to bring additional value to sponsor.
- Prepare and facilitate and overall, PI planning of the Agile Release Train (ART) and provide various ideas, suggestions, and strategies.
- Helped in preparing the overall PI planning of the Agile Release Train (ART) and provided various ideas, suggestions, and strategies.

TECHNICAL COMPETENCIES:

 SKILLS	 TOOLS	 CERTIFICATION & EDUCATION
• Agile & Waterfall Methodology	• MS- Project	• Scrum Master
• Scaled Agile	• MS Office	• Product Owner
• Agile Kanban	• MS Visio	• Safe Scrum Master (5.0)
• PI Planning	• MS-TFS	• Safe Release Train Engineer (5.1)
• Project Lifecycles	• Jira	• Safe SPC (6.0)
• Project Roadmaps	• Jira Confluence	• PMP
• Stakeholder Management	• Service Now	• BBA Finance (University of Texas)
• Client Relations	• Version One	
• Process Improvement	• Git	

• Budget Management	• Jenkins	
• Vendor Management	• Trello	
• Testing Life Cycle		

**AT&T - Dallas, TX
2023**

May 2021 - Oct

Release Train Engineer/Program Manager (PMO)

- As a Program Manager/Release Train Engineer I managed an annual program budget of \$5 M+ Set annual, monthly, and weekly goals for New Handset Sales and Vendor Application System.
- Provided regular status updates to steering committees, stakeholder groups, and executive leadership.
- Used Agile Methodology and adopted Scaled Agile Core Values and applied SAFe Principles and Practices.
- Lead the engagement in transforming from Waterfall to Scaled Agile, started from scratch and matured the teams to the level that was adopted and followed by many divisions at CQ-RE.
- Preparation, Launch and Execution of Agile Release Train by training, coaching, and execution on Safe Agile Methodology and Best Engineering Practices
- Hold the Release Train end to end all dependencies between scrum teams (Scrum of Scrum) and external dependencies are closely monitored and tracked.
- Streamlined project management methodologies and communication in the IT division, which increased efficiency.
- Managed CQ-RE sprints by closely working with development/testing team to integrate the application, system test, ran performance test and move the work product from lower environments to SIT, QA, UAT and PROD
- Created and delivered executive level presentations on project and portfolio details, to include progress, issues, risks, financials, recommendations, and other metrics as required.
- Helped in preparing the overall PI planning of the Agile Release Train (ART) and provided various ideas, suggestions, and strategies.
- Prepared and facilitated overall, PI planning of the Agile Release Train (ART) and provide various ideas, suggestion, and strategies.
- Make sure the team is following agile processes in each sprint at user story level as per the Definition of Done (DoD)
- Work closely with the scrum teams in escalating, tracking, and working towards the resolution of impediments.
- Facilitate Scrum meetings including the Scrum of Scrums, System Demos and Inspect and Adept.
- Provide accurate reporting on project status throughout its life cycle to 6 project teams, stakeholders, and sponsors encompassing budget estimation, scheduling, and resource planning as part of the CQ-RE IT division's policies.
- Initiated formal/informal coaching and mentorship to 50+ team members regarding project charter development, resource planning, project management best practices, and appropriate delivery of project outcomes.
- Collaborated with the Director/Associate Director to optimize the CQ-RE IT governance capabilities by implementing innovative solutions to improve the project governance processes and status reporting.
- Coordinate all project inputs with several functional/technical directors, managers, project core teams, and project staff to formulate appropriate project tools, processes, and methodologies.
- Developed comprehensive monitoring of risks, issues, dependencies, contingency plans, and resources to remove 99% of roadblocks.

Environment: SDLC, Agile Methodology/Safe Scrum, MS Visio, MS Office, MS- Project, Jira and Confluence

Citi - Dallas, TX
April 2021

Nov 2019 -

Project Manager/Scrum Master (PMO)

- Worked as a Project Manager/Scrum master's in business Loan Division on Data Warehouse for (Czech Republic, Poland, UAE, Jordan etc.) Worked with Product Owner to define Project Scope and objectives.
- Enhanced iOS/Android Mobile application system for Business Loan Division.
- Worked effectively with others to remove delivery team roadblocks.
- Used key Scrum metrics (Burndown, Velocity) to help deliver committed work.
- Empowered the team to make system and process improvements captured in Iteration Retrospective Meetings.
- Discussed and analyzed Team status, Progress and Risks, and issues with senior management.
- Agile Methodologies/Scrum Principle was used in acute functionalities to design, document and manage requirements throughout the life cycle of the project, including definition, design, and testing phases.
- Daily Scrum process used for Epic user stories (Sprint Back Log).
- Conducted meetings and workshops to discuss high level requirements and developed User Requirements Specification Document (URD).
- Conducted Impact Analysis for proposed enhancements.
- Worked closely with Developers and User Representatives, participated in the Product Design Process including specifications, end-user reviews and application walk-through.
- Developed Business Use Cases in most instances, worked extensively in gathering user Requirements, manage Workflows and elicit communication plans.
- Generated Use Case diagrams using Visio to depict process flows, timelines, and cost-benefit models.
- Worked with On-site and Off-shore teams for Development and Testing.
- Configured test environment for specific test cases, created test data, executed automated or manual unit tests, documented results, and updated Defect-Tracking Systems.
- Extensively used MS Excel for creating Pivot Table, Vlookups and Advanced Calculations as per business requirement.
- Interacted with Development and QA Team to ensure overall Quality and Scalability of the software.
- **Environment:** SDLC, Agile Methodology/Safe Scrum, MS Visio, MS Office, MS- Project, Jira and Service Now

T-Mobile - Dallas, TX
Oct 2019

Aug 2018 -

Project Manager/ Scrum Master

- Worked as a Project Manager/Scrum Master to deploy as targeted by working with team to move the excess requirements to the next release project.
- Responsible for defining the Scope and Implementing Business Rules for the Project
- Worked on 5G handset application roll out for customer in Pricing and Billing module.
- Agile Methodologies/Scrum Safe Principle was used in acute functionalities to design, document and manage requirements throughout the life cycle of the project, including definition, design and testing phases.
- Scrum Framework used for Epic User Stories (Sprint Back Log)
- Coordinate all Scrum Ceremonies including Sprint Planning, Daily Standups, Sprint Retrospectives, Sprint Demos, Story Grooming.
- Process Improvements captured in sprint Retrospective Meetings.
- Gathered and analyzed Business and User Requirements from walkthroughs with the users and business developers.
- Assisted the technical team in translating application functionality into application architecture and the production of a System Functionality document.

- Followed a structured approach to organize requirements into logical groupings of essential Business Processes, Business Rules and Functional specifications, thus ensuring that Critical Requirements are met thoroughly.
- Configured test environment for specific test cases, created test data, executed automated or manual unit tests, documented results and updated Defect-Tracking Systems
- Focused on continuous process improvement strategies with a clear and measurable Development Process that is deployable throughout the enterprise.
- Assisted the technical team in translating application functionality into application architecture and the production of a System Functionality document.
- Worked from FSD (Functional Specification Documents) to make changes to the mapping document based on a CR (change Request) or Defects for QA
- Managed project and encouraged collaboration between teams onshore and offshore.
- Worked closely with Developers and User Representatives, participated in the Product Design Process including specifications, end-user reviews and application walk-through.
- Controlled project resources, Planning and Implementation using MS Project, SharePoint using AGILE Methodologies

Environment: SDLC, MS Project, MS Visio, MS Excel, MS PowerPoint, Oracle 12c, SAP BI, SAP BODS Tableau, HP ALM, Jira, Confluence, Service Now

JCPenney - Dallas, TX
July 2018

Oct 2017 -

Project Manager/Scrum Master

- As a Project manager I was involved in Oracle BI platform migration.
- I was responsible for the Planning, Executing, and Monitoring phase which in a highly visible project with the budget of \$2M for this project.
- Responsible for requirement and design documentation review, identification of Oracle OBIEE anomalies and test results, customer interaction and IT management.
- Responsible for defining the Scope and Implementing Business Rules of the Project.
- Developed Project Plans, prepared a schedule and ensured work according to same.
- Analyzed Business Requirements and Developed Project Deliverables accordingly.
- Hosted regular Status Meetings and with team members for System Requirements Design, high level Business Requirement.
- Discussed and analyzed Team status, Progress, Risks, and Issues with senior management.
- Promoted to manage complex and highly visible projects with multiple system impacts.
- Led project to deploy as targeted by working with team to move the excess requirements to the next release project.
- Managed project and encouraged collaboration between teams onshore and offshore.
- Hosted regular status meetings and obtained statuses from team members for System Requirements creation, Design, Test Case creation, and Test Case execution.
- Worked closely with Business users, stakeholders, and team members to derive Functional Requirements, System Requirements and Design Walkthroughs.
- Participated in various stages of data and requirement analysis with internal development, and QA teams.
- Improved quality by implementing internal reviews for deliverables to ensure error-free products to the clients.

- Maintained tasks and timeline throughout the life cycle on MS Office Project and regularly distributed it to the team.
- Ensured that team members agreed with proposed requirements by conducting requirement analysis meetings and obtaining signoffs.

Environment: SDLC, Agile Methodology/Safe Scrum, MS Visio, MS Office, MS- Project, Jira and Service Now

Regions Bank - Birmingham, AL
2013 - May 2015

Mar

Project Manager

- Worked as a Project Manager in Data Warehouse (SQL Server 2008, IBM Cognos) reviewed design of System Architecture, Information Strategy, Detailed Design documents, to satisfy the Business Needs and Processes for the core system.
- Responsible for defining the Scope and Implementing Business Rules for the Project.
- Discussed and analyzed Team status, Progress and Risks, and issues with senior management.
- Devised system to generate automated Business Intelligence reports for the internal users.
- Controlled project resources, Planning and Implementation using MS Project, SharePoint using AGILE Methodologies.
- Prepared technical manuals, policy terms and conditions, and Meeting Minutes.
- Prepared project Documentation based on requirements such as Business Required Document (BRD).

- Collaborating with Business Partners and Cross-Functional teams and supporting system documentation.
- Communicated necessary changes and development to stakeholders in meetings.
- Utilized Unified Process to contribute to design standards and provided technical leadership and expertise in reorganization of a complex End-to-End Testing effort.
- Performed System analysis and organizational review of existing QA processes.
- Analyzed Business Requirements from Black Box Testing perspective and developed efficient IT solutions and stable Process Designs using SDLC.
- Prepared Business Process Models including business process flows from conceptual to procedural level, often applying BPR to optimize resource optimization.
- Focused on continuous process improvement strategies with a clear and measurable Development Process that is deployable throughout the enterprise.
- Controlled project resources, planning and implementation using MS Project, SharePoint.
- Modeled Business Architecture by gathering Business Requirements and creating Functional Documents, scheduled, and monitored development process.
- Gathered and analyzed Business and User Requirements from walkthroughs with the users and business developers. Used Rational Requisite Pro to create the requirement analysis and specification documents.
- Assisted the technical team in translating application functionality into application architecture and the production of a System Functionality document.

Environment: SDLC, Agile Methodology, Windows XP, MS Office, MS Project, MS SharePoint, SQL Server 2008, DB2, IBM Cognos

Plains Capital Bank - Dallas, TX
2011 - Feb 2013

Aug

Project Manager/Business Analyst

- Worked as a Project Manager/Business Analyst in Data Warehouse environment.
- Discussed and analyzed Team status, Progress and Risks, and issues with senior management.
- Extracted and gathered the business requirements like extensive search capabilities, sourcing tools from the business experts and architects, developed Functional Specifications and Use Cases.
- Worked Tremendously on SAP BI to set up new accounts, manage teams and issue resolution.
- Participated JAD Sessions to develop an architectural solution and ensure that the application meets the business requirements, Resolve Open Issues, and change requests.
- Extensively worked on Business Requirement Document (BRD), supporting documents containing essential business elements, detailed definition, and description of the relationship between the stakeholders.
- Participated in JAD Sessions to develop an architectural solution and ensure that the application meets the business requirements, resolve open issues, and change requests.
- Worked from FSD (Functional Specification Documents) to make changes to the mapping document based on a CR (change Request) or Defects for QA.
- Worked on Integrating and Synchronizing Front Office by generating Job alert notifications, tracking communications, and matching job orders against available candidates.
- Analyzed Software Requirements documents, and Business Requirements documents to get a better understanding of the system on both Technical and Business perspectives.
- Analyzed business functional requirements and segregated them into Use Case Specifications.
- Conducted GAP Analysis in understanding how the upgraded system carries out the business functions and assists in ensuring the timely and effective implementation.
- Involved in Feasibility Study and performed Impact Analysis for proposed enhancements.
- Created Test cases and plans to accomplish the same and make them available to Business.
- Conducted and participated in walkthroughs to discuss certain issues with the development, design and QA team.
- Interacted with the Developers, QA and Engineering teams for resolving report bugs, technical issues.
- Conducted User-Acceptance Testing before the release of the product to business user.

Environment: MS Project, MS Visio, UML, SDLC, Waterfall, MS Office, Microsoft SharePoint, SQL Server 2012, SAP BI.

Target - Minneapolis, MN
July 2011

Jan 2010 -

Project Manager

- Gathered business and technical requirements for the project.
- Extensively worked on Business Requirement Document and Functional Requirement Document.
- Analyzed the requirements and created the requirements document.
- Conducted Requirement Gap analysis by comparing the current and future system functionalities and understanding the rules and rates for the state in consideration.
- Gathered requirement for User interfaces from Legacy Systems.
- Interacted with Subject Matter Experts to get clarifications on the product.
- Created functional specifications from the Business Requirements Document.
- Designed the mappings to load the conversions data from source to target MS SSIS.
- Coordinated between the various project teams (Data Acquisition, Reference Data, CRM team and Reporting teams) for a smooth data flow process.
- Involved in transmitting the code across different environments: development, testing and production.
- Ensured accurate and timely flow of key project execution information between all key stakeholders. involved in the implementation of the Data & Analytics roadmap as well as business-as-usual request.
- Designed, implemented technology practices, guidelines, and repeatable processes with MS BI solution.
- Worked with technical team to capture information on OLAP cubes in MS SSAS.
- Provided clear and concise documentation regarding requirements management plans, functional requirements, supplemental requirements, test plans and test cases.
- Created and Executed User Acceptance Test scripts & Test plans.
- Involved in providing the support for the Application.
- Defined logic for Extraction, Transformation and Loading in MS SSIS.
- Experience with the full Microsoft BI Stack (SSRS, SSIS, SSAS).
- Experience working with MS-SSRS in data reporting environments.

Environment: MS Project, MS Visio, UAT, UML, SDLC, MS Dynamic CRM, SQL Server 2008, MS SSIS, MS SSRS, SSAS.

El Paso Energy - Houston, TX
Dec 2009

Oct 2008 -

Business Analyst

- Interacted with Users and Stakeholders to identify business system needs, evaluated solutions for business problems.
- Worked with SMEs of different groups to gain detailed knowledge of Energy Distribution and to understand the cross impacts of the system.
- Analyzed and documented information system requirements and the corresponding impact on business processes.
- Studied the Business Requirement Document (BRD), supporting documents containing essential business elements, detailed definition, and description of the relationship between the actors.
- Designed and developed Use Case Diagrams, Activity Diagrams, and Data Flow Diagrams to define the Business Process.
- Analyzed the data entity relationships and worked on multiple short-term projects in between.
- Worked as a team with other business analysts to make an object-oriented model of the application and created use cases.

- Conducted JAD sessions to allow different stakeholders to communicate with each other, resolve problems at early stage.
- Worked on the Functional Requirements Document (FRD).
- Hands on experience in working with active directory, to give privileges and access to the users according to their roles and designations.
- Analyzed Business Requirements documents to get a better understanding of the system on both Technical and Business perspectives.

Environment: SDLC, Waterfall Methodology, MS Office, MS projects, MS Visio, Rational Rose, SQL Server 2008, MS Dynamic CRM.

Abbott Laboratories - Chicago, IL
2007 - Sept 2008

July

Business Analyst

- Conducted detailed and comprehensive business analysis by working with the client IT staff and end-users in order to identify system and operational requirements and improvements.
- Analysed and documented Business requirements and Business Process Models to create BRD for better understanding of the business process.
- Created the business process model using Visio and present it to the SME for validation and getting the signoffs.
- Conducted JAD sessions to allow different stakeholders to communicate their perspectives with each other, resolve any issues and come to an agreement quickly.
- Followed the WUP/RUP based methods by using Visio to create UML Diagrams like Use Cases, Activity Diagrams, Sequence Diagrams, and Collaboration Diagrams to author FSD (Functional Requirement Document).
- Tracked and maintained Stakeholder requested enhancements and changes using SharePoint.
- Used Excel to create the data mapping documents which is used by the Development & Testing team, I worked very closely with them to make sure the correct data element is being passed from one system to another.
- Attended JAD Sessions to capture Business rules around Data elements on the User Interface system.
- Conducted walk through meeting to validate the accuracy of the mapping document with the Business and technical team.
- Worked closely with the Technical Analyst to study the UI Prototypes, USE CASE BAC (Business Acceptance Criteria document) and DRD (Data Requirements Document) in order understands how data is passed from one System to another and how the system interacts with other systems.
- Worked from FSD (Functional Specification Documents) to make changes to the mapping document based on a CR (change Request) or Defects for QA.
- Was actively involved in Cross Platform meetings validating Data transfer accuracy & Data migration rules with different system.
- Environment: MS Access, Excel, Word, PowerPoint, SharePoint, I-Rise, MS Visio, Oracle 8i, Rational Requisite Pro, Rational Clear Quest.

Environment: SDLC, MS Access, Excel, Word, PowerPoint, SharePoint, I-Rise, MS Visio, Oracle 8i, Rational Requisite Pro, Rational Clear Quest.

Allstate Insurance - Dallas, TX
June 2007

June 2005 -

Business Analyst (Process)

- Conducted meetings/interviews and JAD sessions with stakeholders to collect business requirements. This information along with the vision document was used to transform business requirements into System Requirements Specifications.
- Interacted with the stakeholders to review and baseline the design documents.
- Helped identifying reports for decision support system and was interacted with database designers and architect.
- Conducted milestones planning of the project through walkthroughs and meetings involving various leads from Development, QA and Technical Support teams.
- Responsible for defining and documenting System Requirement Specifications/feature requirements and supplementary requirements in Requisite Pro.
- Created and managed project templates, use case project templates, requirement types and traceability relationships in Requisite Pro.
- Created Sequence Diagrams, State Chart Diagrams and Data Flow Diagrams (DFD's) using MS Visio.
- Created Use Case Model and detailed use cases in conjunction with the project team, to define the features of the application, to be used by the development team.
- Interacted with the QA team to design test cases from the detailed use cases and the use case diagram, using Test Director.
- Attended Change Request Meetings to document corresponding changes and implemented procedures for enforcing changes through defect tracking using Test Director.
- Collected test metrics weekly that reflected the status of the test execution and the state of the defects and presented weekly status report to management.
- Developed strategies/ solutions to resolve the supply chain issues while creating special cases for extremely important / critical functions.
- Developed new clients for the company while marketing the various services offered.
- Environment: MS Access, Excel, Word, PowerPoint, SharePoint, Waterfall Methodology, MS Excel, MS Visio, SQL.

Environment: SDLC, Waterfall Methodology, MS- Project, MS Access, Excel, Word, PowerPoint, SharePoint, SQL
