

Amarjeet Singh

Sr. Engineering Manager

Dallas, TX 
+1 (630) 337 4151 
teotia.amar@gmail.com 

PROFESSIONAL SUMMARY

- Results-Driven Engineering Manager with 19 years' with expertise in orchestrating end-to-end Enterprise-level Software Development Lifecycles (SDLC), specializing in Architecture, Functional and Technical design, Development, Implementation, and Support.
- Proficient in Microservices architecture applications, utilizing **Spring Boot, Pivotal Cloud Foundry, AWS, Azure Cloud, RabbitMQ, Kafka, Docker, Kubernetes, Cassandra, Oracle, and REST APIs.**
- Expertise in Java, J2EE, EJB, JDBC, JSP, Servlets, STRUTS, Spring Core, Spring MVC, Hibernate, and Web Services (SOAP AND REST API) technologies.
- Experienced in crafting strategic roadmaps for seamless transitions to target enterprise future states, aligning with both business and technology goals.
- Proven track record of collaborating with business partners, comprehending their vision, and creating, presenting, and periodically updating technical strategies for enterprises.
- Successfully led the migration of complex enterprise applications from monoliths to cloud and microservices, showcasing prowess with **AWS and Azure.**
- Deep knowledge of DevOps practices, including Continuous Integration (CI), Continuous Delivery (CD), Build Automation, and Test-Driven Development, employing tools such as Jenkins, Maven, Ansible, Git, and Docker.
- Hands-on experience in data modeling and architecture, particularly with **Cassandra, Cosmos DB, and NoSQL Databases.**
- Strong knowledge of Application Development using various methodologies, including **Scaled Agile Framework® (SAFe®)** and Waterfall.
- Strong Communication and Leadership skills.
- Excellent communication and leadership skills, demonstrated through successful collaboration with cross-functional teams.
- Innovation and Assessment:
- Extensive experience in conducting Proof of Concepts (POCs) and Proof of Technologies (POTs) for technology assessment within projects.
- Proven track record as a Microservices Architect, specializing in designing and implementing scalable and efficient microservices architecture solutions.

SKILLS AND COMPETENCIES

Business and IT Stakeholder Collaboration | Strategic Roadmap Development | Team management | Cloud Environments (Pivotal Cloud Foundry, Azure, Google Cloud) | Global Project Leadership | Enterprise Integration | Cloud Architecture | Interpersonal Relationship Skills | Building Relationships with people at all levels | Prioritize tasks effectively for self and teams | Kubernetes, OpenShift, REST APIs, Docker, CI/CD Pipeline | Confluent Kafka, WebSphere MQ, RabbitMQ | Caching, NGINX, AWS EC2, VPC, S3 | EFS, AWS Kinesis, Lambda | Cassandra, MongoDB, Cosmos DB Oracle, DB2 | Spinnaker, Jenkins, Bamboo | AWS Cloud, Azure Cloud, Pivotal Cloud Foundry | Docker, ACR, Azure APIM | jQuery, AngularJS, Open API, Swagger | Maven, Gradle, JFrog, Nexus | XML, Avro, YAML, Java Script, HTML5

EXPERIENCE

Sr.Engineering Manager | Federal Express Corporation-FedEx

Jan 2022 – Till Date

- Orchestrated the end-to-end delivery of cutting-edge solutions by spearheading software engineering teams from conceptualization to production.
- Mentored a team of software engineers, fostering technical excellence, consistency, thoughtfulness, and a customer-centric approach to ensure a high-performing team.

- Defined project architecture using Kafka messaging and Event-Driven architecture, optimizing messaging in highly scalable systems.
- Successfully planned and executed a Kafka cluster upgrade, ensuring zero impact on existing applications.
- Defined and communicated robust design and coding standards for distributed services, ensuring consistency and quality across the development process.
- Led development teams in various projects, guiding the timely and quality delivery of new features and technical improvements.
- Employed Gradle to build applications and orchestrated seamless deployments to Cloud Platforms across diverse testing and production environments using Jenkins CI/CD pipelines.
- Pioneered the exploration of new technologies, contributing to proof-of-concepts (POCs) for the latest advancements. Defined and executed strategies to align with architectural objectives.

Manager Engineering | Discover Financial Services

Jan 2020 – Jan 2022

- Designed and architected robust REST APIs using Spring Boot, ensuring the highest standards of code quality and application excellence.
- Led technical teams in the delivery of high-quality software components within an Agile (Scrum) development methodology, emphasizing efficiency and collaboration.
- Deployed REST APIs to Pivotal Cloud Foundry (PCF) and Red Hat OpenShift Cloud Platform using CI/CD pipelines, streamlining the deployment process. Successfully migrated multiple Spring Boot applications from Oracle JDK to OpenJDK.
- Established deployment pipelines for microservices applications using Harness self-service CI/CD, optimizing the efficiency of the development lifecycle.
- Actively participated in PI planning, presenting plans for teams in the Scaled Agile Framework® (SAFe®), contributing to a cohesive and
- Engaged in Sprint planning, Standups, Product backlog grooming, Sprint review, retrospectives, and Scrum of Scrums, ensuring effective communication and collaboration throughout the Agile process.
- Proactively remediated multiple security vulnerabilities in Git by eliminating the use of secrets within the source code, enhancing overall code security.
- Assumed responsibility for the technical supervision of teams, ensuring the highest standards of product quality through rigorous quality assurance measures.
- Created detailed architectural diagrams for applications, providing comprehensive blueprints to guide application teams and ensure alignment with overarching architectural goals.

Manager Engineering | GlobalLogic Inc.

Oct 2017 – Jan 2020

- Established inter-service communication using Apache Kafka as a distributed streaming platform, enhancing the seamless flow of data across services.
- Led the API lifecycle development, taking full responsibility for software development and ensuring uncompromising code quality throughout.
- Implemented various APIs using YAML for contract definition and created Avro Schemas for event definitions, fostering communication between diverse microservices.
- Led a team as a Technical Architect, ensuring the delivery of high-quality software components within the Agile (Scrum) development methodology.
- Engineered highly available, reliable, and secure API solutions using Microservices and the Spring Boot Framework, emphasizing robust architectural practices.
- Orchestrated the deployment of microservices to the Azure Cloud Platform in Docker containers using CI/CD pipelines, ensuring efficient and automated deployment workflows.
- Implemented data access using the Hibernate ORM tool and Cassandra as a NoSQL Database, optimizing data retrieval and storage processes.
- Conducted essential Agile ceremonies, including Sprint planning, Standups, Product backlog grooming, Sprint review, and retrospectives. Actively participated in Scrum of Scrums to ensure effective cross-team collaboration.
- Constructed logical and service models using tools such as Enterprise Architect and Visio, providing a comprehensive visual representation of the system architecture.

- Developed REST APIs to facilitate mobile payment wallet transactions for Apple Pay, Android Pay, and Samsung Pay, catering to the specific needs of a prominent banking client.
- Prepared comprehensive design documents and API specifications for various credit card payment processing APIs, collaborating closely with business stakeholders for alignment.
- Implemented advanced API security measures using JWT, JWE, JWS, and SHA encryption, enhancing secure communication between APIs in distributed networks.
- Managed and maintained third-party security certificates, ensuring the secure integration of third-party APIs into the system.
- Engineered Jenkins jobs to automate application deployment on different environments, leveraging the capabilities of Pivotal Cloud Foundry (PCF).
- Led the production installation of a highly available application, executing traffic flips with zero downtime for users, ensuring a seamless transition.
- Built applications using Gradle and deployed them to various testing environments using Jenkins CI/CD pipelines, streamlining the development and deployment process.
- Managed the migration of software configuration management from ClearCase to enterprise Git repositories, paving the way for continuous integration and continuous delivery.
- Prepared and executed various batch jobs for reporting transactional data, providing critical insights for business decision-making.
- Conducted Disaster Recovery planning meetings and meticulously prepared turnover documents for support teams, ensuring preparedness for unforeseen events.
- Analyzed application logs using the centralized logging system Splunk, identifying and resolving critical production issues efficiently.

Application Developer | IBM India Pvt. Ltd.**Oct 2014 – Nov 2015**

- Led production support teams across multiple geographic locations, ensuring seamless collaboration and efficient issue resolution.
- Analyzed critical issues and presented progress updates on production issues in Reliability calls during organizational meetings.
- Designed change requests and provided estimations for client approval, outlining the necessary steps for resolving production issues.
- Modified and created new business rules in the JBoss rule engine to accommodate evolving business requirements.
- Discussed and formulated resolution plans for aging issues, actively participating in daily calls to address and resolve lingering challenges.
- Managed development activities and provided mentorship to junior developers, fostering a collaborative and knowledge-sharing environment.
- Prepared the Data Access layer using Hibernate 4, facilitating the seamless persistence of objects into the database.
- Orchestrated the planning of monthly production deployments, coordinating Quality Assurance (QA) and User Acceptance Testing (UAT) activities with independent QA teams.

Lead Engineer | Samsung India Electronics Pvt. Ltd.**Jul 2013 – Oct 2014**

- Monitored and provided technical guidance to a diverse development team spanning multiple domains, ensuring a cohesive and high-performing unit.
- Crafted the high-level design of a Cloud-Based Broker application, outlining the architecture and components to guide development efforts.
- Prepared UML diagrams and comprehensive design documents, offering a clear and structured blueprint for the development process.
- Led the migration of the application's user interface to AngularJS, enhancing user experience and ensuring modern and responsive design principles.
- Designed WSDL files for the implementation of web services, developing corresponding implementation classes. Implemented Service-Oriented Architecture (SOA) with SOAP-based web services to facilitate communication between systems.
- Designed and coded various modules effectively using Spring MVC, ensuring the seamless implementation of business requirements and maintaining a modular and scalable architecture.

- Identify, analyze, and select information technology and business practices that strategically align with and support business processes and plans.
- Actively participate in the design, development, testing, and integration of applications of medium complexity, contributing to the successful implementation of technology solutions.
- Contribute to the implementation of information technology and business processes of medium complexity, ensuring effective integration with organizational objectives.
- Support, evaluate, and continuously improve information technology and business processes, maintaining alignment with medium-complexity business plans while mitigating moderate risks.
- Collaborate in the creation of project plans and schedules, ensuring they align with business requirements and contribute to the successful execution of strategic initiatives.
- Establish broad contacts with multiple departments and functional operations, facilitating regular interaction with business contacts to promote collaboration and cross-functional alignment.

- Leveraged Spring Core for effective dependency injection and Inversion of Control (IOC), seamlessly integrating frameworks such as Struts and Hibernate to enhance application architecture.
- Managed and mentored a team of application developers, overseeing responsibilities, detailing Use Cases, managing project schedules, and setting module targets to ensure efficient project execution.
- Spearheaded the development of an insurance application using a comprehensive technology stack, including Java, Spring, Hibernate, DB2, WebLogic, JavaScript, and CSS.
- Applied Hibernate for robust Object/Relational Mapping (ORM) to facilitate seamless persistence of data onto the Oracle database, optimizing data access and storage processes.
- Configured the Hibernate framework within deployment descriptors and configuration files, ensuring optimal performance and adherence to best practices in the application's deployment.

**EDUCATION**

- **Master of Science | Southern Arkansas University Magnolia, Arkansas USA**
2020 – 2021
- **Bachelor of Technology | Uttar Pradesh Technical University Lucknow INDIA**
2001 – 2005

**CERTIFICATIONS**

AWS Certified Solutions Architect | AWS
Azure AI Engineer Associate | Microsoft
