PROFESSIONAL SUMMARY:

Around 10 years of extensive experience in Software Quality Assurance in both Manual and Automated Testing with Test Lead experiences. As a Software Automation Engineer seeking a software QA testing position in a company where I can use my current knowledge and use it to enhance, develop and for continuous growth of the organization, and maintain strict adherence to its guidelines, policies and procedures.

- Automation Test Lead experience for 4 years and handling onsite and offshore team members.
- Hands on combined experience in Manual, Functional, Regression, Automation and End to End testing of Web services, Web-based & windows applications.
- Mobile testing with Appium for both Android and IOS for automation and a power mirror for manual testing.
- Experience in testing native Applications for both Android and iOS using Appium
- Used Appium to facilitate mobile testing by creating a mobile Driver class with the required Mobile capabilities.
- To run the regression suite nightly basis we triggers our project into Jenkins(CI/CD)
- Involved in developing the automation script for Native applications (IOS, Android)
- Quality Assurance specialist with 9 years of experience on Functional and Automation testing.
- SDET with the ability to set up, maintain and operate the test automation framework.
- Hands on combined experience in Manual Functional, Regression, Automation and End to End testing of Web services, Web-based & windows applications.
- Extensive knowledge of developing different types of frameworks like data driven and Page Object framework and BDD/cucumber framework and Gherkins for 5 years of experience in Children's place and Gap Inc like currently I am working with that.
- Solid analytical and dynamic troubleshooting skills and ability to work independently with minimal supervision and perform as part of a team.
- Hands-on experience using DataDog Synthetics and DataDog APM for monitoring application performance, setting up proactive alerts, and integrating monitoring into CI/CD pipelines for real-time issue detection and production stability.
- Experienced with test case and defect tracking in tools such as JIRA and ALM (e.g., Micro Focus QC, Azure DevOps).
- Experience in writing Test cases covering all the business functionalities.
- Experience in prioritizing and completing projects while meeting deadlines and organization goals.
- Experience in supporting Test Cycles, Compiling Test Status Reports, participating
- Defect Status meetings, Project Status meetings and interacting with Project Managers, Operations Teams and Engineers.
- Familiar with Unix/Linux command-line tools for file navigation, server logs, and test execution.
- Proficient in creating automation scripts from scratch. Extensive knowledge of
- Developing different types of frameworks like data driven and Page Object framework and BDD/cucumber framework.
- Expert on J-unit and TestNG framework for Smoke and Regression testing, Maven for
- Project building tool, Jenkins for Continuous Integration.
- Extensive knowledge on Selenium IDE, Selenium WebDriver using Java language.

- Experienced working on Selenium grid to perform parallel and cross browsing testing and Sauce Labs for remotely run projects in different platforms.
- Sound Knowledge in web services like Restful and postman used Log4j to log my automation report and used Extent Reports for graphical report, provided that to the responsible person.
- Hands On experience in different IDEs like Brackets, Eclipse, and IntelliJ.
- Collaborated with offshore and onshore team members to design and deploy the build release on time and helped team members to make code more efficient.
- Highly experienced working on agile methodology to deploy the software.
- Sound knowledge to build automation Script from scratch using BDD, Cucumber with Page Object Model using java language.
- Responsible for designing feature files based on BRD and implementing that in step definition file.
- Sound knowledge on SQL queries and backend validation testing.
- Good in Web Architecture using different languages like HTML, CSS, JavaScript, jQuery, and Ajax.
- Teamwork & collaboration skills to work across organizations and lead cross-functional teams
- Communication & stakeholder management skills.
- Ability to work in a team environment and client interfacing skills.
- 9 years of experience on agile methodologies.
- Experience on Json and working with Karate framework
- Used Rest Assured as automation API testing.

PROFESSIONAL EXPERIENCE:

GAP INC

San Francisco, CA (Remote)

March 2022 - present

Automation Test Lead

Responsibilities:

- Using Appium for mobile app Automation testing both Android and IOS.
- Using Postman for manual API testing and BDD with Karate for API automation.
- Validate Restful API services, Validate Status code, headers, response body etc.
- Sound knowledge on SQL queries and backend validation testing using MySQL
- Updates and validate data from database
- Identified mobile elements using Appium Inspector, and UI Automator Viewer.
- Work in agile methodology with Scrum
- Working with BDD/Cucumber framework and Gherkins.
- To run the regression suite nightly basis we trigger our project into Jenkins(CI/CD)
- Prepare Test cases for the application, review them with the developers, and finalize it.
- Participate in the technical review of test automation project deliverables ensuring deadlines and schedules are still in scope and on track.
- Identified mobile elements using Appium Inspector, and UI Automator Viewer.
- Experience in Perfecto Test Object, and Appium iOS and Android element identification.
- Used Xcode build for building and running XCUI Tests for command line
- Define and track quality assurance metrics such as defect severities, open defect counts, and impact to projects.
- Assess level of effort for QA tasks, resolve blockers in the QA cycle without manager intervention.
- Used Appium, Selenium, ADB, AVD, Android Studio, and Xcode to test mobile web pages on IOS and Android devices.

- Collaborated with business analysts and developers to test Oracle E-Business Suite modules for order management and inventory workflows. Validated backend transactions and reports generated by Oracle applications using SQL queries.
- Expertise in QA Methodologies like Agile, SCRUM. Quality Assurance Life Cycle,
- Test Strategy, Test metrics. Working on a full Software Development Life Cycle (SDLC) used Jira for bug tracking.
- Used DataDog APM and logs to diagnose root causes of test failures and performance bottlenecks in ecommerce workflows.
- Writing automation script with Java using TestNG, Selenium WebDriver with Page Object Model.
- Cloud test we are using the AWS platform.
- Use different TestNG annotations and attributes to design test case for smoke and regression

Environment:

Java, Selenium WebDriver, Appium, IntelliJ, TestNG, Maven, Karate, Cucumber, Postman, Jenkins (CI/CD), Bitbucket, AWS, GitHub, DataDog Synthetics, DataDog APM, SQL, JIRA, Xpath, Windows.

Best Buy

Richfield, MN (Remote)

February 2020 - March 2022

Automation Test Lead

Responsibilities:

Develop automation test scripts for iOS & Android apps using JAVA, Selenium and Appium.

Using Appium for mobile app Automation testing both Android and IOS.

UI Testing with Selenium WebDriver.

Implemented mobile automation frameworks using Appium.

Work in agile methodology and attend all meetings.

Prepare Test cases for the application, review them with the developers, and finalize it.

Participate in the technical review of test automation project deliverables ensuring deadlines and schedules are still in scope and on track.

Collaborated with business analysts and developers to test Oracle E-Business Suite modules for order management and inventory workflows. Validated backend transactions and reports generated by Oracle applications using SQL queries.

Created reusable test components and selectors using Page Object Model in Playwright.

Define and track quality assurance metrics such as defect severities, open defect counts, and impact to projects.

Used emulators like Xcode and Android studio to emulate mobile automation.

Assess level of effort for QA tasks, resolve blockers in the QA cycle without manager intervention.

Appium in different environments like local (Xcode project for IOS and Android studio for emulator) and remote with perfecto

Expertise in QA Methodologies like Agile, SCRUM. Quality Assurance Life Cycle,

Test Strategy, Test metrics. Working on a full Software Development Life Cycle (SDLC) used Jira for bug tracking.

Writing automation script with Java using TestNG, Selenium WebDriver with Page Object Model

Adopted Test-Driven Development (TDD) approach to write unit tests for automation scripts, ensuring code reliability by developing tests first, which helped in early defect detection and improving the quality of the automation framework for both mobile and web applications.

Developed pilot test cases in Playwright to compare performance, parallel execution, and maintainability with legacy Selenium suite.

Worked on regression testing of enterprise systems integrated with Oracle Financials and Oracle Order Management. Used SQL queries to validate data in Oracle RDBMS tables post Oracle patch deployments. Coordinate efforts between development teams and offshore enterprise test team. Using Postman for manual API testing and Rest Assured for API automation. Used Appium, Selenium, Android Studio, and Xcode to test mobile web pages on IOS and Android devices. Sound knowledge on SQL queries and backend validation testing using MySQL

Environment:

Java, Selenium WebDriver, Appium, IntelliJ, TestNG, Maven, Postman, Rest Assured, Jenkins, GitHub, Xcode, Android Studio, Jira, SQL, Oracle, AWS, Perfecto, BDD/Cucumber

Children's place

Secaucus, NJ - 07094

January 2015 to December 2019

QA Automation Engineer

Responsibilities:

- Prepared Requirement Traceability Matrix to help debugging the defects
- Writing automation script with Java using TestNG, Selenium WebDriver with Page Object Model
- Hands on combined experience in Functional, Regression, Automation and End to End testing of Web based application
- Performed System Testing to ensure the validity of the requirements
- Performed User Acceptance and Regression Testing with UAT test scenarios
- Implemented Test-Driven Development (TDD) practices to write unit tests before developing automation scripts, ensuring that test cases were designed and passed early in the development cycle, improving code quality and reducing defects in the final product.
- Find and report defects and subsequently validate the fix, repeating the process until done.
- Attended Project Domain and Internal Project Functionality Training Sessions
- Worked closely with the cross functional teams to ensure successful, high quality incremental releases.
- Built POC test suites using Playwright to evaluate feasibility of migrating existing Selenium frameworks.
- Participated in Walkthroughs and Defect report meetings periodically
- Summarized test results as per customer standards

Environment: Java, Selenium WebDriver, Appium, Eclipse, TestNG, IntelliJ, TDD, Maven, Karate, Cucumber, Postman, Jenkins(CI/CD), Bitbucket, Firebug, JIRA, Xpath, SQL, AWS, GitHub, Windows.

EDUCATION:

- Bachelor (MBBS) from Dhaka(2003)
