Sr. ServiceNow Developer

Professional Summary:

Dedicated Sr. ServiceNow Developer with over 8+ years of experience in designing, developing, and implementing robust ServiceNow solutions and workflows. Proficient in JavaScript, Angular JS, Python, PowerShell, and various web technologies to create seamless integrations with SOAP and RESTful APIs. Expertise in ServiceNow modules such as CMDB, Integration Hub ETL, Flow Designer, ITOM, HAM, SAM, ITSM, and Cloning, with a focus on custom application development, workflow optimization, and automation. Skilled in using SAM Pro's discovery and normalization capabilities to accurately identify and standardize software assets across the organization. Experienced in creating and managing user stories, epics, and sprints in JIRA for Agile development projects. Proven ability to deliver advanced reporting and dashboard solutions using ServiceNow's Performance Analytics and AI capabilities. Strong communicator and collaborator, adept at engaging with stakeholders to understand requirements and provide technical leadership. Experienced in mentoring junior developers and contributing to continuous improvement initiatives.

Technical Skills:

Programming Languages: JavaScript, Angular JS, Python, PowerShell

Web Technologies: HTML, CSS, AngularJS, RESTful APIs, SOAP

Databases: SQL, MySQL, Oracle

ServiceNow Modules: CMDB, Integration Hub ETL, Flow Designer, ITOM, HAM, SAM, ITSM, Cloning

Integrations: AWS, Azure, DevOps tools (Jenkins, GitHub), ERP systems (SAP, Oracle), middleware (Dell Boomi, MuleSoft)

Reporting and Analytics: ServiceNow Performance Analytics, Reporting and Analytics

Other Tools: UI Builder, Mobile Studio, Virtual Agent Designer, Vulnerability Response module, Event Management module, Knowledge Management module

CERTIFICATION AND AWARDS

- ☐ ServiceNow Certified Application Developer
- ☐ Certified Implementation Specialist - ITSM
- ☐ ServiceNow Certified System Administrator
- ☐ Certified Implementation Specialist – Discovery
- ☐ ServiceNow Micro Certifications - 9
- ☐ Agile Scrum Foundation

Educational Details :

- Bachelor's Degree : Bachelor of Medicine, Bachelor of surgery (MBBS)

Professional Experience:

Client: Geisinger Health System – Danville, PA

Duration: August 2021 to Present

Sr.ServiceNow developer

Responsibilities:

- Developed, implemented, and administered ServiceNow solutions and workflows using JavaScript, Angular JS, Python, PowerShell, and integrations with web services (SOAP and REST) and APIs.
- Managed relational databases such as SQL, MySQL, and Oracle to write SQL and execute database queries to support CMDB and asset discovery concepts and integration with external modules.
- Spearheaded in development and optimization of **HR** service Catalog, enhancing employee experience and workflow efficiency within ServiceNow HR Service Delivery.
- Execute ServiceNow ITSM implementation, project delivery, and provided consultancy services to business regarding overall strategic business transformation leveraging ServiceNow.
- Utilize HR Service Delivery (HRSD) and run HR reports to view the status of HR cases, track them, and intervene where required to improve overall efficiency and effectiveness.
- Create cases for automated HR processes, such as employee onboarding and offboarding.
- Worked on Customer Service Management (CSM) providing services across development and solutions.
- Proposed solutions supporting various tasks across the Procurement Service Management preserving best data management practices, suggesting guidelines, and managing catalogues.
- Utilized Procurement Module to simplify end-to-end processes, strategizing priorities for proposals and quotations.
- Supported deliverables and workflows within HAM (Hardware Asset Management) SAM (Software Asset Management).

- Worked on license management within Software Asset Management (SAM) and allocated active and purchase rights.
- Worked on Hardware Asset Management (HAM) and ensured lifecycle completions, deployment, maintenance, and disposal.
- Carried out Reconciliation, Reclamation, Remediation, Reharvesting, and Entitlements.
- Monitored and controlled IT hardware assets and implemented asset and configuration strategies.
- Facilitated refining ongoing data improvement processes and data continuity within IT Asset Management (ITAM).
- Work on Governance Risk and Compliance (GRC), and Integrated Risk Management (IRM) carrying out risk frameworks.
- Monitored risk frameworks, developed automated testing controls and workflows, and generated audit reporting.
- Leveraged risk tolerance while establishing accountability measures to further assess threats and vulnerabilities and internal policies impacting procedures in-use.
- Established security checkpoint controls to ensure smooth version upgrades.
- Utilized App Engine to deploy, maintain and configure systems, including developing e-commerce and payment platforms.
- Conducted code reviews on behalf of stakeholders, resolved bottlenecks and improved scripts' reliability.
- Manage governance regulations and establish maps for control within systems.
- Automate functional procedures, streamline compliance, and integrate business processes.
- Assess risk monitoring analytics and develop mechanisms for uploading and sharing documents across organizations.
- Support vendor contracts on catalogs and workflows, notifications and inbound actions, requirement gathering, performance analytics, reporting and integrations.
- Maintain and administer the implemented instance of ServiceNow and performed tasks such as configuring users, company, site, location and other existing fields, support groups, assignment rules, categorizations, CI data, SLA etc.
- Create notifications based on user requirements and configured inbound email actions to create incidents or requests.
- Offer solutions within ServiceNow environment to include new or modifications to applications, forms, workflow, policies, actions, access control, interfaces and other configurations required to support client processes.
- Develop service catalogs including new catalog items, HR case module, designing workflows and execution plans.
- Design Service Portal for user access to Knowledge Base and Service Catalog.
- Develop several UI Pages and service portal as per business requirements.
- Determine, analyze and formulate current practices, user needs, workflow processes, issues and potential solutions.

- Facilitate in test plans for network, user acceptance and parallel usage to determine configuration for user interface.
- Create, export and retrieve update sets, schedules, reports, new business rules, script includes and client catalog script.
- Assist in adherence to IT Service Management enterprise policies, standards, procedures, and guidelines for all ITIL processes.
- Create and utilize Update Sets to move all the work from one instance to another.
- Implement ServiceNow ITSM applications using ITIL V4 services best practice processes, methods, testing, and training projects.
- Perform CSDM and CMDB maintenance and restructure according to company's architecture.
- Experience in content management system and portfolio management in creating and managing existing project portfolios.
- Knowledge of Virtual machines, VMware, App Engine, access deployments and automating frameworks and visual workflows.
- Designed Azure based on Microsoft Azure PaaS services.
- Performed peer review for codes and configured ways to pull data from SAP systems.
- Developed and implemented REST API integrations enabling communication between application and external systems.
- Worked on API documentation including authentication methods, time limits, and formats.
- Integrated Chatbot with IT support portal providing frameworks for interactive knowledge articles and resolution.
- Utilized Chatbot and improved workflows offering engaging and interactive support to customers.
- Automated end-to-end management process via Oracle integration improving usage policies during lifecycle maintenance.
- Worked on authentication and approvals to curtail repetitive tasks during onboarding and offboarding and issuance of assets.
- Experience with Web Services integrations and worked on Active Directory, LDAP, JAVASCRIPT, AJAX, CSS, XML, HTML and UNIX.

Client: Centene Corporation – St. Louis, MO

Duration: June 2018 to July 2021

Sr. ServiceNow Developer

Responsibilities:

- Designed and implemented ServiceNow Service Portal pages using HTML, CSS, and AngularJS, and customized the look and feel of the portal according to client requirements.
- Created and maintained technical documentation related to ServiceNow development, including requirements, design documents, test cases, and user manuals.

- Configured and managed custom workflows in ServiceNow, including approvals, notifications, and automation of tasks across different modules.
- Leveraged ServiceNow's Virtual Agent Designer to create and deploy advanced chatbot solutions, enhancing user interaction and self-service capabilities.
- Configured and customized Incident Management and Problem Management applications to meet business requirements.
- Designed and implemented custom UI for lab users using Angular JS, JavaScript and HTML.
- Utilized HR Service Delivery (HRSD) and run HR reports to create cases for HR processes, such as onboarding and offboarding.
- Created Order Guides according to the client requirement.
- Maintained, administered, and implemented instance of ServiceNow modules including Incident, Problem, and Service Catalog.
- Wrote Business Rules, Client Scripts, UI Policies and UI Actions to customize the instance as per Business needs.
- Modified several widgets and I have a thorough understanding of the Angular framework on which Service Portal is built.
- Performed integration between service watch and ServiceNow Configuration Management Database (CMDB).
- ServiceNow Development and Implementation of ITOM product such as Discovery, Service Mapping and Event Management.
- Managed SLA definitions for different Service Groups and Software Discovery.
- Worked on Discovery and set up mid servers and check for the connectivity.
- Installed MID Servers on remote desktop and conducted tests required for Discovery.
- Worked on customizing user interface including forms, lists and created record producers for incident and change management.
- Built reports, gauges and home pages; searched, populated and customized the knowledge base.
- Helped customer realize business value from CA Clarity PPM tool.
- Defined processes to monitor and evaluate the performance of key Portfolio components.
- Optimized and balanced the Portfolio for performance and value delivery; evaluated Trade-offs of Portfolio objectives- balancing of short-term goals against long-term goals.
- Involved in providing Implementation and production support for Service Catalog, Asset Management modules.
- Created and utilized Update Sets to migrate customizations from one instance to another and between systems.
- Analyzed end-user requirements and business rules based on given documentation.
- Configured LDAP Server and LDAP Listener for updating the user and group table record.
- Configured Email Notifications for different modules in ServiceNow.

- Involved in working with process owners to develop workflow; implemented the workflows in Service Applications and administered the tools and enhanced requests by Java Scripts.
- Configured multiple Catalog Items Front-end web/GUI components using JavaScript, SOAP, Web services, CSS, HTML5.
- Wrote Data Sources, transform maps and properly analyzed coalesce to avoid duplicates in ServiceNow.
- Conducted business studies on past, future and comparative performance and develop forecast models.
- Identified trends, advise company and recommend actions to a senior financial analyst based on comprehensive analysis.
- Integrated REST APIs and enhanced functionality in data exchange.
- Conducted API integration testing to ensure performance and stability.
- Experience with Web Services integrations and with web services via APIs and worked on Active Directory, LDAP, JAVASCRIPT, AJAX, CSS, XML, HTML and UNIX.

Client: Juniper Networks - Sunnyvale, CA

Duration: August 2016 to May 2018

ServiceNow Developer

Responsibilities:

- Developed and implemented ServiceNow solutions and workflows using JavaScript, Angular JS, Python, PowerShell, and other programming languages.
- Utilized ServiceNow's various modules such as CMDB, Integration Hub ETL, Flow Designer, ITOM, HAM, SAM, ITSM, and Cloning to develop and modify custom applications, catalog items, portals, workflows, and flow designer.
- Managed relational databases such as SQL, MySQL, and Oracle to write SQL and execute database queries to support CMDB and asset discovery concepts and integration with external modules.
- Implemented advanced UI customization using ServiceNow's UI Builder, enhancing the user experience and aligning with client branding requirements.
- Implemented advanced UI customization using ServiceNow's UI Builder and Bootstrap framework for responsive and user-friendly interfaces.
- Developed custom RESTful APIs within ServiceNow for seamless integration with external applications and data sources.
- Configured and optimized ServiceNow's Cloud Management module for efficient cloud resource provisioning and management.
- Utilized ServiceNow's Event Management module to create automated event correlation and remediation workflows.
- Integrated ServiceNow with IT monitoring tools like Nagios and SolarWinds for enhanced infrastructure monitoring and alerting.
- Developed and configured ServiceNow's Mobile Studio to create mobile-friendly applications and workflows, improving accessibility for remote users.

- Integrated ServiceNow with enterprise resource planning (ERP) systems like SAP and Oracle to streamline business operations and data synchronization.
- Configured and maintained ServiceNow's Governance, Risk, and Compliance (GRC) module to enhance risk management and compliance tracking.
- Utilized ServiceNow's Discovery and Service Mapping tools to create a comprehensive view of the IT infrastructure, improving asset management and incident resolution.
- Utilized web services such as SOAP and REST, as well as APIs to integrate with other products and services.
- Supported, edited, and created integrations with other products and services using integration hub and orchestration, web services, APIs, and related transform mappings.
- Utilized knowledge of ServiceNow's architecture and data model to design and implement scalable solutions.
- Conducted requirements gathering sessions with stakeholders to define business requirements and translate them into technical specifications.
- Developed standardized HAM asset tagging and labeling procedures to improve tracking accuracy.
- Implemented a disposal and recycling program for end-of-life HAM assets, ensuring compliance with environmental regulations
- Implemented ServiceNow's Automated Test Framework (ATF) for automated testing of ServiceNow applications and workflows.
- Configured ServiceNow's Service Catalog with catalog items, variables, and workflows for streamlined service request management.
- Utilized ServiceNow's Business Rules and Script Includes for server-side scripting and logic customization.
- Integrated ServiceNow with LDAP/Active Directory for centralized user authentication and access control.
- Implemented ServiceNow's Change Management module for standardized change request processes and approvals.
- Designed, developed, and tested complex workflows, integrations, and customizations within ServiceNow.
- Provided end-to-end project management for ServiceNow implementations, including requirements gathering, design, development, testing, and deployment.
- Assisted in the development of ServiceNow training materials and provided training to end-users.
- Created and maintained technical documentation including design documents, technical specifications, test cases, and user manuals.
- Utilized ServiceNow reporting and analytics to provide insights and recommendations to stakeholders.
- Worked closely with ServiceNow administrators to ensure the stability and performance of the platform.
- Participated in the ServiceNow community by attending user groups, conferences, and other events.

- Implemented ServiceNow upgrades, patches, and hotfixes to ensure the platform is up to date and secure.
- Provided ongoing support and maintenance for ServiceNow solutions, including troubleshooting and bug fixing.
- Collaborated with cross-functional teams, including IT, operations, and business stakeholders.
- Maintained a thorough understanding of ServiceNow's product roadmap and upcoming features.
- Implemented best practices for ServiceNow development and design, including version control, code review, and testing methodologies.
- Continuously improved skills and knowledge in ServiceNow by attending training sessions, reading technical blogs, and participating in online forums.
- Managed HAM refresh cycles to ensure timely upgrades and reduce support costs for legacy systems.

Client: Fermilab

Duration: July 2015 to July 2016

Java developer

Responsibilities:

- Prepared a detailed plan for the design and development of the above modules having considered the dependencies on other Development Centres, Contingencies, Resources and time based on the complexity of each sub task
- Understood the existing Auto Quote Purchase project requirements of post purchase flow in Auto Insurance.
- Sent system generated Welcome Email to customers after the purchase of policy having the links to the Customer Temp ID and Binder.
- Used a service to manage the Temporary Storage of the documents to provide the Customer the capability to view, edit and delete the document before purchase of the policy
- Stored the documents in permanent storage after purchase and delete the records from the temp storage

- Implemented the SEED Framework to create different Temp ID and Binders based on the states selected and finally to update the databases
- Developed User Interface for all Line of Business (LOB) to create, upload, store and email the supporting docs
- Developed a SOAP Based Web Service to update the various status, keys related to customer in the database whenever it gets invoked by the various User Interface and legacy systems
- Performed the workstation set up for developing the project
- Created the web service which gets redirected using the ESB Mule Server.
- Implemented the various Operations of the Auto Background Listener to update the request Database with the corresponding fields
- Used the Background Listener framework methods to update the Auto related fields in the database
- Created an utility service which passes the beans and other metadata to create an xml document which we can send it to the web service to create the PDF files required to be uploaded by the Customer
- Understood the interface of the Communication Processing Service, populated the values based on the line of business and returned the Produced Artifact to be uploaded and stored
