

Professional Summary:

- Experienced **Sr. Cloud DevOps Engineer** with 10 years in **Cloud Infrastructure, Automation, and CI/CD**, specializing in **AWS, Azure, Terraform, and Kubernetes**.
- Designed and implemented highly available, fault-tolerant, and scalable cloud solutions across **AWS** and **Azure** environments.
- Developed and maintained **CI/CD pipelines** using **Jenkins, Azure DevOps, and GitHub Actions** to automate application deployment and infrastructure provisioning.
- Expertise in **Infrastructure as Code (IaC)** using **Terraform, AWS CloudFormation, and Azure Bicep**, optimizing cloud resource management and reducing deployment time.
- Configured and managed **Kubernetes** clusters using **Amazon EKS and Azure AKS**, ensuring efficient container orchestration and workload scaling.
- Automated infrastructure provisioning, configuration management, and application deployment using **Ansible and Terraform**.
- Implemented **Blue-Green and Canary deployment** strategies in **Kubernetes** using **Istio and AWS App Mesh** for zero-downtime releases.
- Experience in managing **cloud networking** components, including **VPCs, Subnets, Route 53, Load Balancers, Azure Traffic Manager, AWS Transit Gateway, and Azure Virtual WAN**.
- Implemented **AWS Control Tower and AWS Organizations** for centralized multi-account governance and security compliance.
- Integrated **HashiCorp Vault** for **secure secrets management** across cloud environments.
- Managed **Infrastructure as Code (IaC) versioning** and automation using **Terraform Cloud and Atlantis**.
- Configured **AWS Transit Gateway and Azure Virtual WAN** for seamless hybrid and multi-cloud networking.
- Implemented serverless solutions using **AWS Lambda, API Gateway, and Azure Functions** to optimize compute costs and improve scalability.
- Developed and deployed containerized applications using **Docker, Kubernetes, and Helm Charts** for microservices-based architectures.
- Automated database provisioning and scaling using **AWS RDS Proxy, Aurora Serverless, and Azure Database for PostgreSQL**.
- Experience in **cloud security**, implementing **IAM policies**, security groups, encryption, and compliance controls in **AWS and Azure**.
- Managed monitoring and logging solutions using **AWS CloudWatch, Azure Monitor, Prometheus, and ELK Stack** to ensure application reliability.
- Implemented observability best practices with **Open Telemetry, Prometheus, and Grafana** for deep system insights.
- Expertise in designing and implementing **disaster recovery and backup strategies** using **AWS Backup, Azure Site Recovery**, and automated failover mechanisms.
- Experience in **hybrid cloud deployments**, integrating **on-premises infrastructure** with **cloud environments** using **VPN, ExpressRoute, and Direct Connect**.
- Integrated **DevSecOps** best practices, including **vulnerability scanning, compliance automation, and security policies** into **CI/CD pipelines**.
- Automated patch management and system updates using **Ansible and AWS Systems Manager** to ensure compliance and security.
- Hands-on experience with **GitOps** principles using **ArgoCD and FluxCD** for **Kubernetes deployments**.
- Configured **Azure Bicep** for declarative infrastructure deployment alongside **Terraform**.
- Deployed **AI/ML workloads** on cloud infrastructure using **AWS Sage Maker and Azure Machine Learning**.
- Developed and maintained **Python and Shell scripts** for automation, monitoring, and cloud resource management.

Technical Skills:

Category	Skills
Cloud Platforms	AWS, Azure, GCP, AWS Lambda
Automation & Configuration Management	Terraform, Ansible, Puppet, Chef
CI/CD Tools	Jenkins, Azure DevOps, GitLab, Maven, Bamboo
Cloud Technologies	AWS, Azure, EC2, S3, Lambda, Kubernetes, Terraform
Containerization & Orchestration	Docker, Kubernetes, Docker Swarm, OpenShift
Monitoring & Security	Prometheus, Grafana, CloudWatch, Splunk, Nagios
Scripting Languages	Python, Shell Scripting, PowerShell, Groovy, Bash
Version Control	Git, GitHub, Bitbucket
Security	IAM, Vault, SSL, Encryption
Infrastructure as Code (IaC)	Terraform, CloudFormation

Professional Experience:

Client: DIRECTV, Irving, TX

Aug 2024 – Till Now

Role: Sr. Azure DevOps Engineer

Responsibilities:

- Designed and optimized **CI/CD pipelines** in **Azure DevOps** to streamline software releases, reducing deployment failures and improving rollback capabilities.
- Automated **Azure infrastructure provisioning** and application deployments using **Terraform, ARM templates, and Bicep** to ensure consistent, scalable, and secure cloud environments.
- Implemented **Azure Policy** and **RBAC** to enforce security and compliance across cloud resources, enhancing governance and operational efficiency.
- Designed and implemented CI/CD pipelines using **Harness, Azure DevOps, Jenkins, and GitHub Actions** to automate application deployment and infrastructure provisioning.
- Developed and managed **Infrastructure as Code (IaC)** templates using **Harness, Terraform, AWS CloudFormation, and Azure Bicep**, ensuring scalable and consistent cloud infrastructure.
- Configured and managed **Kubernetes clusters (AKS, EKS)** with **Harness, Helm, ArgoCD, and FluxCD** for **GitOps-based** deployments.
- Migrated on-premises applications and workloads to **Azure**, ensuring seamless integration with cloud-native services such as **Azure App Service, Azure Functions, and Azure Storage**.
- Optimized **AKS (Azure Kubernetes Service)** clusters by implementing **auto-scaling, load balancing, and rolling updates**, improving performance and reliability of containerized applications.
- Developed and maintained **YAML-based pipelines** in **Azure DevOps**, integrating automated **security scans, unit tests, and deployment validations** to enhance software quality.
- Implemented **Azure API Management (APIM)** for secure and scalable API exposure, enabling seamless integration between internal and external services.
- Configured and managed **Azure Application Gateway** and **Azure Front Door** for enhanced traffic routing, load balancing, and security against **DDoS attacks**.
- Managed **Kubernetes clusters** with **Helm, ArgoCD, and FluxCD** for **GitOps workflows**.
- Integrated **Azure Key Vault** for secure storage and automated rotation of **secrets, certificates, and encryption keys** to meet compliance and security standards.
- Implemented **Azure Monitor** and **Log Analytics** to track **application performance, infrastructure health, and security threats**, ensuring proactive issue resolution.
- Deployed and managed **Azure Functions** to handle **event-driven workloads**, optimizing cloud costs and improving application responsiveness.
- Automated **Kubernetes deployments** using **Helm charts**, improving release consistency and reducing deployment complexity.
- Configured **Azure DevOps Artifacts** for **package management** and efficient dependency tracking across development teams.
- Leveraged **Azure Service Bus** and **Event Grid** to implement **event-driven architectures**, ensuring reliable messaging and decoupled **microservices communication**.
- Automated **infrastructure and configuration management** using **Ansible**, improving consistency and reducing manual intervention in **Azure environments**.
- Designed **disaster recovery (DR) and backup strategies** using **Azure Site Recovery** and **Azure Backup** to ensure business continuity.
- Optimized **cloud spending** by implementing **Azure Cost Management** and **Reservations**, reducing operational expenses without impacting performance.
- Enforced container security best practices by integrating **Azure Defender for Kubernetes** and implementing vulnerability scanning in **CI/CD workflows**.
- Developed and managed **Helm chart repositories** for version-controlled **Kubernetes application deployments**.
- Developed **PowerShell** and **Bash scripts** for automating repetitive cloud administration tasks, improving efficiency and reducing operational overhead.
- Configured and managed **hybrid cloud connectivity** using **Azure ExpressRoute** and **VPN Gateway** for secure and high-performance on-prem to cloud integrations.
- Integrated **Azure AD SSO** and **MFA** to enhance **authentication security** and streamline user access management across enterprise applications.
- Developed and maintained **Infrastructure-as-Code (IaC) modules** to enable rapid provisioning and standardized deployments across multiple environments.
- Managed and optimized **database services** in **Azure**, including **Azure SQL Database** and **Cosmos DB**, ensuring high availability and performance.
- Worked closely with development and security teams to implement **DevSecOps** practices, incorporating **security checks** at every stage of the software development lifecycle.
- Monitored and improved **Azure Virtual Desktop (AVD)** performance for remote workforce enablement, ensuring low-latency access to enterprise applications.
- Integrated **Prometheus** and **Grafana** with **Azure Monitor** for enhanced visualization and proactive alerting on cloud infrastructure performance.
- Integrated **Helm** with **GitOps** tools like **ArgoCD** and **FluxCD** for automated, declarative **Kubernetes deployments**.

- Enabled logging and monitoring automation by integrating **Azure Log Analytics** with **third-party SIEM tools** for real-time security event analysis.
- Designed and implemented **enterprise-wide Azure governance framework**, including naming conventions, tagging policies, and access controls.
- Managed observability and monitoring using Harness, Prometheus, Grafana, AWS CloudWatch, and Azure Monitor for real-time system insights.
- Implemented Blue-Green and Canary deployment strategies in Kubernetes using Harness, Istio, and AWS App Mesh for zero-downtime releases.
- Spearheaded **cost-optimization initiatives** using **Azure Advisor** recommendations, Reserved Instances, and auto-shutdown schedules to minimize cloud expenses.
- Collaborated with software development teams to **containerize applications** using **Docker** and optimize deployment workflows in **Kubernetes clusters**.
- Led migration of legacy **Jenkins pipelines** to **Azure DevOps**, improving **pipeline efficiency** and reducing maintenance efforts.

Environment: Azure DevOps, CI/CD, Terraform, ARM Templates, Bicep, Azure Policy, RBAC, AKS (Azure Kubernetes Service), YAML, Azure API Management (APIM), Azure Application Gateway, Ansible, PowerShell, Bash, VPN Gateway, Azure AD SSO, MFA, Azure SQL Database, Cosmos DB, Prometheus, Grafana, SIEM, Docker, Kubernetes, Jenkins.

Client: CITI Bank, Irving, TX

Feb 2023-July 2024

Role: Sr. Infrastructure Engineer

Responsibilities:

- Designed, configured, and deployed **Azure Resource Manager (ARM) templates** to provision secure and scalable cloud infrastructure for banking applications, ensuring compliance with financial regulations.
- Architected and implemented cloud-based solutions using **Azure Compute, Web App, Function App, Blobs, Data Factory, Resource Groups, and Azure Cosmos DB**, supporting critical banking operations.
- Configured and managed **Web Apps, Function Apps, V-net integration, HCM, Application Gateway, App Insights, Active Directory, Azure Key Vault, and Encryption** to enhance security and performance of financial applications.
- Developed and deployed serverless solutions using **Azure Functions with Node.js** to process real-time financial transactions and ensure scalability.
- Developed and deployed serverless solutions using Harness, AWS Lambda, API Gateway, and Azure Functions to optimize compute costs and improve scalability.
- Automated database provisioning and scaling using Harness, AWS RDS Proxy, Aurora Serverless, and Azure Database for PostgreSQL.
- Spearheaded **Kubernetes cluster deployments using AKS**, optimizing resource management and high availability for banking applications.
- Expertise in AWS and Azure cloud infrastructure, optimizing networking, security, and cost management strategies using Harness for deployment automation.
- Automated infrastructure provisioning and configuration management using Harness and Ansible, improving deployment consistency and reducing manual efforts.
- Integrated DevSecOps best practices into CI/CD pipelines using Harness, implementing security scanning, compliance automation, and vulnerability assessments.
- Customized Helm charts to enable environment-specific configurations for microservices in Kubernetes clusters.
- Implemented **YAML configurations** to streamline **Kubernetes** deployments, ensuring consistency and compliance with industry standards.
- Implemented Helm-based rollbacks and upgrades to ensure seamless application version control in production.
- Automated infrastructure provisioning and application deployments using **Terraform, ARM templates, and Azure DevOps** to support digital banking transformation.
- Integrated **Terraform** with the **CI/CD pipeline** for seamless provisioning and management of cloud infrastructure in **Azure**.
- Led the migration of on-premises banking applications to **Azure Cloud**, leveraging **Jenkins, OpenShift, and Kubernetes** for secure, scalable deployments.
- Designed and implemented **CI/CD pipelines using Jenkins and Azure DevOps** to accelerate the delivery of secure financial applications.
- Developed **Ansible playbooks** for automated configuration management, ensuring compliance with banking security policies.
- Designed CI/CD pipelines incorporating Helm for packaging, deploying, and managing Kubernetes applications efficiently.
- Implemented security best practices in cloud environments, including **IAM policies, Network Security Groups, and Azure Key Vault** for securing sensitive banking data.
- Deployed and monitored containerized applications using **Docker, AKS, and Azure Container Instances (ACI)** for banking microservices.
- Configured **OpenShift environments** for container orchestration, ensuring high availability and compliance with banking industry standards.
- Utilized **Prometheus and Grafana** for monitoring banking applications, ensuring real-time visibility into system health and performance.

- Developed and managed **Helm charts** to standardize **Kubernetes** deployments, improving efficiency in banking application releases.
- Designed scalable **backend services and APIs using Node.js** to support high-volume banking transactions and secure financial data exchange.
- Integrated **security scanning tools** into **CI/CD pipelines**, ensuring banking applications meet compliance requirements such as **PCI DSS** and **SOX**.
- Implemented **DevSecOps** strategies to enhance compliance, security auditing, and continuous monitoring of financial applications.
- Developed **Groovy scripts** to automate **Jenkins multi-branch pipeline** projects, improving build and deployment efficiency for banking services.
- Configured and maintained **GitLab CI/CD pipelines** to streamline the development and deployment of financial applications.
- Established **logging and monitoring frameworks** for banking applications, utilizing **Azure Monitor, Log Analytics, and Application Insights**.
- Orchestrated disaster recovery strategies and high-availability setups using **Azure Site Recovery** and **geo-redundant storage solutions** for business continuity in banking.
- Automated compliance reporting and auditing for cloud infrastructure using **Python and Terraform**, ensuring adherence to banking industry regulations.
- Implemented encryption techniques and key management policies in **Azure Key Vault** to protect sensitive financial data.
- Designed and enforced **Role-Based Access Control (RBAC) policies** to ensure secure access management for banking applications.
- Optimized performance of **Azure SQL Databases and Cosmos DB** for financial transaction processing and real-time analytics.
- Developed and maintained **API Gateways** for secure and efficient integration between banking applications and third-party financial services.
- Ensured adherence to **GDPR, PCI DSS, and other financial compliance standards** by implementing secure data storage and transmission practices.
- Led **cloud cost optimization initiatives** by implementing **reserved instances, auto-scaling policies, and monitoring cloud expenditures** for financial services.

Environment: Azure Resource Manager (ARM) templates,, Data Factory, Azure Cosmos DB, HCM, Application Gateway, Azure Key Vault, Node.js, Kubernetes (AKS), YAML, Terraform, Azure DevOps, Jenkins, OpenShift, CI/CD pipelines, Ansible, IAM policies, Network Security Groups, Docker, Azure Container Instances (ACI), Prometheus, Grafana, Helm charts, Node.js, DevSecOps, Groovy scripts, GitLab CI/CD, Python, Role-Based Access Control (RBAC), SQL Databases, API Gateways, PCI DSS, GDPR.

Client: Morgan Stanley, NJ

Jan 2020 – July 2021

Role: DevOps Engineer

Responsibilities:

- Designed and implemented **CI/CD pipelines** in **Azure DevOps**, integrating with **GitHub, Jira, and Docker** to automate **build, test, and deployment** processes.
- Managed **Azure infrastructure** components, including **Azure Web Roles, Worker Roles, SQL Azure, and Azure Storage**, ensuring high availability and performance.
- Automated **virtual machine backup and recovery** using **Azure PowerShell** and Recovery Services Vault, enhancing disaster recovery capabilities.
- Configured **Azure Traffic Manager, Load Balancers, and Application Gateway** to optimize network traffic routing and ensure seamless application performance.
- Developed **PowerShell** and **Azure Automation runbooks** for automating operational tasks, reducing manual effort in **Azure environment management**.
- Deployed and managed **Kubernetes clusters**, automating container orchestration with **Helm charts** and **Kubernetes YAML** configurations.
- Built and deployed **Node.js** applications using **Jenkins** and **Kubernetes**, leveraging **Azure Container Registry** for secure image storage and deployment.
- Implemented **Blue-Green** and **Canary deployment** strategies in **Kubernetes** to ensure zero-downtime releases and improved rollback capabilities.
- Integrated **Istio service mesh** with **Kubernetes clusters** to enhance microservices communication, security, and observability.
- Established **Git branching strategies** and integrated **Git** with **Jenkins pipelines** to enable efficient **source code** versioning and continuous integration.
- Automated infrastructure provisioning and configuration management using **Ansible playbooks**, reducing deployment times and improving system consistency.
- Developed and optimized **Bash** and **Python scripts** to automate deployments, monitoring, and system administration tasks.
- Managed **Apache Tomcat** application server deployments, ensuring efficient hosting and performance of **Java-based** applications.

- Installed and maintained **YUM** and **RPM packages** for software distribution and system updates across multiple servers.
- Supported production environments, troubleshooting infrastructure and application issues to maintain system stability and performance.
- Collaborated with **development** and **security teams** to enforce **DevSecOps best practices**, ensuring compliance with **Morgan Stanley's security policies**.
- Enhanced **monitoring and logging** using **Prometheus, Grafana, and ELK Stack**, improving system visibility and incident response times.
- Migrated **legacy applications** to **cloud-native architectures**, leveraging **Azure Kubernetes Service (AKS)** for scalability and operational efficiency.
- Ensured **high system availability** through proactive incident management, performance tuning, and capacity planning initiatives.

Environment: Azure DevOps, GitHub, Jira, Docker, CI/CD, Azure Web Roles, Worker Roles, SQL Azure, Azure Storage, Azure PowerShell, Helm charts, Kubernetes YAML, Node.js, Jenkins, Istio, Git, Jenkins Pipelines, Ansible Playbooks, Bash, Python, Apache Tomcat, Java, YUM, RPM, DevSecOps, Prometheus, Grafana, ELK Stack, Azure Kubernetes Service (AKS).

Client: Elevance Health, IN

Feb 2018- Dec 2019

Role: AWS Engineer

Responsibilities:

- Designed and deployed AWS infrastructure, including **EC2, RDS, ELB, and Auto Scaling**, to support high-availability applications.
- Implemented **AWS IAM policies, roles**, and permissions to ensure secure access control and compliance with organizational policies.
- Configured and optimized **AWS EC2 instances**, leveraging Auto Scaling and CloudWatch for performance monitoring and cost efficiency.
- Developed CI/CD pipelines using **Jenkins, Git, and AWS Code Build** to automate application builds, testing, and deployments.
- Managed containerized applications using **Docker** and orchestrated deployments with **Kubernetes**, enhancing scalability and efficiency.
- Migrated on-premises applications to AWS, configuring networking, security groups, and **VPC** peering for seamless integration.
- Automated infrastructure provisioning using AWS CloudFormation and Ansible, ensuring consistency and reducing deployment time.
- Integrated **AWS Glue** with **S3** and **DynamoDB** for **ETL workflows**, scheduling Crawlers to automate data schema inference and transformation.
- Configured **Route 53** for DNS management and implemented routing policies such as Weighted, Failover, and Latency-based routing.
- Enabled **AWS CloudTrail** and **CloudWatch** for logging, monitoring, and auditing of infrastructure and application activities.
- Developed **Python scripts** to automate operational tasks, including log rotation, system health checks, and resource monitoring.
- Monitored production and corporate infrastructure using **AWS CloudWatch**, setting up alerts and notifications for proactive incident response.
- Designed and managed **VPCs**, subnets, security groups, and NACLs to ensure a secure and scalable cloud environment.
- Deployed microservices-based applications using **AWS Elastic Beanstalk**, optimizing performance with Auto Scaling and ELB.
- Managed configuration and release processes, ensuring streamlined deployments and rollback mechanisms for critical applications.
- Set up and maintained **GIT-SVN** mirroring for version control, enabling seamless collaboration across development teams.
- Configured **Jenkins** for continuous integration, integrating automated testing frameworks to improve software quality.
- Administered **AWS S3 storage**, implementing lifecycle policies for cost optimization and data retention compliance.
- Led troubleshooting and root cause analysis for AWS infrastructure and application issues, minimizing downtime and service disruptions.

Environment: AWS (EC2, RDS, ELB, Auto Scaling, VPC, IAM, S3, Route 53, CloudFormation, CloudWatch, CloudTrail, Glue, DynamoDB), Jenkins, Git, SVN, Docker, Kubernetes, Ansible, Python, CI/CD, Terraform, Networking (Security Groups, NACLs, Subnets), Microservices, Elastic Beanstalk.

Client: Accenture, Hyderabad

Aug 2014– Sep 2017

Role: Python Developer

Responsibilities:

- Developed and maintained web applications using **Python, Django, PostgreSQL**, and **JavaScript** to enhance customer and administrator functionalities.
- Designed and implemented a dashboard control panel with dynamic user interfaces using **Django, HTML, CSS, JavaScript**, and **jQuery**.

- Built and optimized database queries using **PostgreSQL**, leveraging **Multi-Version Concurrency Control (MVCC)** for efficient data storage and retrieval.
- Implemented authentication and authorization workflows for employee registration and login using **Python 2.7** and **PostgreSQL**.
- Designed and automated test cases for **Command Line Interface (CLI)** applications using **Python** to streamline deployment and system management.
- Developed and managed cloud-based solutions on **Azure, AWS, and Digital Ocean**, integrating **Microsoft Office 365** and **Azure Active Directory** services.
- Performed **unit testing, integration testing, and user acceptance testing** to ensure software reliability and performance.
- Built responsive UI components and multi-page web forms using **AngularJS, Bootstrap, and ExtJS** for improved user experience.
- Automated UI regression testing using **Selenium WebDriver** and integrated Java-based unit tests using **JUnit** and **Maven**.
- Designed and deployed web applications in **Red Hat Linux** environments, managing **OS configurations, network settings, and application servers**.
- Developed and maintained **RESTful API** integrations, ensuring seamless communication between **microservices** and front-end applications.
- Executed software development projects using the **Waterfall model**, while also incorporating **Agile methodologies** and serving as **Scrum Master** for various initiatives.
- Employed **Maven** for build automation, dependency management, and generating software quality reports.

Environment: Python, Django, PostgreSQL, JavaScript, jQuery, HTML, CSS, Multi-Version Concurrency Control (MVCC), AngularJS, Bootstrap, ExtJS, Selenium WebDriver, JUnit, Maven, Azure, AWS, Digital Ocean, Microsoft Office 365, Azure Active Directory, RESTful API, Red Hat Linux, CLI, Agile, Scrum Master, Waterfall Model.
