SUMMARY

Accomplished Senior Software Engineer with over 16 years of comprehensive experience in all stages of the application development lifecycle, from requirements gathering and design to prototyping, development, testing, maintenance, and support. Expertise in delivering high-quality solutions across diverse platforms. Well versed in cloud architecture, automation, and observability. Adept at solving complex technical challenges, optimizing application performance, and leading teams through all phases of software development. Known for excellent problem-solving skills, attention to detail, and a strong commitment to driving innovation and delivering robust software solutions.

PROFICIENCIES

Languages: C#, C#.NET, C, C++, PHP, ReactJS, Node.js, Python, JavaScript, Gherkin, Java

Frameworks: Angular, Sencha ExtJS, NestJS, jQuery

Database and Storage: SQL Server, PostgreSQL, Redis, NoSQL, MariaDB, MySQL, CouchDB

Platforms and Services: Google Cloud Platform, Amazon Web Services, Apache, IIS

Tools: Kubernetes, Docker, JSON Web Tokens

Automation and Testing: Postman, Newman, Jest, Cypress, GitHub Actions, BDD, SonarQube, Selenium

EXPERIENCE

Senior Software Engineer

NCR Voyix, Atlanta, GA | March 2012 – May 2025

- Acted as technical lead engineer on a key development team, engineering and maintaining a C#-based RESTful cloud-powered microservices SOA ecosystem using Google Cloud Platform and Kubernetes. This framework underpins a next-generation point-of-sale backend, using Redis and PostgreSQL for scalable, reliable, and high-performing transactional systems.
- Worked as an engineer on a team designing and maintaining an Angular-based point-of-sale frontend, paired with a Nest “backend-for-frontend” layer to integrate smoothly with backend microservices, ensuring a cohesive and responsive user experience.

- Contributed to the design and maintenance of a React-based customer-facing configuration frontend, paired with a Node.js backend layer for integration with our microservices, allowing customers to control the configuration of their point-of-sale installation.
- Collaborated extensively with global teams across diverse cultures, partnering with team leads, architects, fellow engineers, and QA personnel to align project goals, streamline development processes, and deliver high-quality solutions on an international scale.
- Helped implement an automated testing framework, incorporating Postman, Newman, BDD testing, SonarQube for code quality, and GitHub Actions for automation. This effort improved CI/CD pipeline efficiency, deployment speed, and system reliability.
- Built a management and automation tool with PHP, ExtJS, jQuery, and Python to deploy customized full-stack e-commerce sites efficiently, while equipping support teams with customer-assistance features. Integrated with AWS for domain management and Shopify for billing, it enhanced workflows, cut deployment times, and boosted customer satisfaction.
- Created a rapid-import system for a Magento-based e-commerce platform (PHP/MySQL), optimizing a 200,000-record site import from two hours to ten minutes, enabling near real-time inventory updates for customers.
- Contributed significantly to NCR's e-commerce efforts on Magento 1 and 2 (PHP/MySQL), developing custom modules and tailoring functionality to business needs. Managed maintenance with security and feature patches aligned to a custom codebase, and enforced testing with Behat, Mink, and Selenium for stability and performance.
- Mentored junior software engineers, guiding their growth with hands-on support, fostering skill development, and ensuring high-quality project delivery to meet exacting standards.

Technical Specialist / Applications

Forsyth County Board of Education, Cumming, GA | September 2004 – March 2012

As the sole Software Engineer:

- Designed and implemented a help desk and ticketing system to enhance user-to-technician support workflows across the enterprise, utilizing a PHP backend, ExtJS and jQuery frontend, and MariaDB for storage.
- Developed an inventory management and monitoring system for real-time asset tracking, built with PHP and an ExtJS frontend, paired with a MySQL backend, and integrated with Zebra Windows CE devices through a custom C# application (Visual Studio 2008, CF3.5).
- Created an access control and time monitoring system, connected to an RFID access card server's MSSQL database, delivering real-time reports on personnel locations and loiter times to improve security oversight.

- Engineered a project management system, embedded in the help desk platform, to track hardware and software rollouts across an enterprise with over 20 locations, ensuring coordinated deployment efforts.
- Built a change control tracking system, integrated into the help desk, allowing network engineers and technology managers to monitor critical system changes with greater accountability.
- Developed a web-based printer management tool for non-privileged domain users, employing domain controller scripting to execute elevated tasks on user machines, minimizing technician visits and operational costs. (PHP, Javascript, jQuery, MySQL)
- Constructed a digital signage and alert system, enabling users to design, schedule, and display full-screen content, videos, animations, and a ticker-tape notification bar for effective communication across the organization. (PHP, Javascript, jQuery, MySQL)

Freelance Work

Imagine Role Playing: Built a dynamically adaptive e-commerce site (PHP/MariaDB/HTML5/CSS).

Play-N-Trade Mall of Georgia: Crafted an e-commerce platform (defunct) (PHP/MySQL/Flash/HTML).

Starling Services: Subcontracted on diverse web projects for large firms (PHP/HTML/CSS).

EDUCATION AND CERTIFICATIONS

South Forsyth High School | 1992 – 1994

North Georgia College / Georgia Tech | 1994 – 1996

MySQL Database Administration Training | 2009, Atlanta, GA

A+ Certification | DOS/Windows Specialization
