

# CASMIR EGEMASI

Aubrey,  
United States | +1 (832) 539-3378 | [egemasicasmir34@gmail.com](mailto:egemasicasmir34@gmail.com)

## Profile

Accomplished DevOps Engineer with over 7 years of experience designing scalable cloud architectures and robust CI/CD pipelines across AWS, Azure, and GCP. Demonstrates expertise in infrastructure automation with Terraform and Ansible, ensuring secure and cost-efficient deployments. Proven track record of optimizing containerized environments with Docker and Kubernetes while enhancing system reliability. Committed to driving seamless development workflows and accelerating application delivery.

## Skills

- **Cloud Platforms:** Azure, AWS
- **CI/CD Tools:** Jenkins, GitHub Actions, GitLab CI, CircleCI
- **Infrastructure Automation:** Terraform, Ansible, Chef
- **Containerization:** Docker, Kubernetes
- **Scripting:** Python, PowerShell, Bash
- **Monitoring Tools:** Monitoring tools
- **Version Control Systems:** Version control systems
- **Systems & Networking:** Networking concepts, Security practices, System administration
- **Core Competencies:** DevOps

## Employment History

### Ocean Drive Logistics

Oct 2019 - Jun 2025

DevOps / Cloud Engineer

Denton

- Architected and implemented robust CI/CD pipelines using Azure, Linux, and Jenkins to streamline deployments and reduce security incident response times.
- Engineered scalable, reliable, and cost-efficient cloud solutions in Azure, aligning with business objectives and industry best practices.
- Optimized core Azure resources including Virtual Machines, Virtual Networks, Load Balancers, and Storage Accounts to enhance performance and cost efficiency.
- Enhanced identity and access management through Azure Active Directory and Role-Based Access Control, ensuring secure operations.
- Monitored system performance and diagnosed issues using Azure Monitor, Log Analytics, and Application Insights.
- Revamped infrastructure automation with Azure DevOps, ARM templates, and Terraform to achieve a 30% reduction in setup time and ensure environment consistency.
- Deployed and managed Azure Kubernetes Service (AKS) clusters for production workloads with secure configurations and optimized resources.
- Directed Kubernetes application lifecycles, including deployments, services, ingress, and persistent storage management.
- Automated deployments and routine tasks using PowerShell and Azure CLI to improve operational efficiency.
- Ensured compliance with GDPR, HIPAA, and ISO standards through the strategic use of Azure Policy and Azure Security Center.
- Designed hybrid cloud environments by connecting on-premises networks to Azure via VPN Gateways and ExpressRoute for seamless integration.
- Secured network traffic with Azure Firewall, Front Door, and Application Gateway, while implementing DDoS protection and Azure Key Vault.
- Engineered cost-effective storage solutions with Azure Blob, File, and Disk Storage and leveraged Azure Cost Management for optimization.
- Implemented backup and disaster recovery with Azure Backup and Site Recovery to guarantee business continuity.
- Migrated on-premises applications and data to Azure using Azure Migrate and Data Migration Services, ensuring minimal downtime.
- Established cloud governance via naming conventions, tagging strategies, and cost allocation models.
- Collaborated with cross-functional teams in Agile sprints to deliver iterative cloud solutions and architect highly available systems with geo-redundancy.
- Strengthened network security with Network Security Groups, encryption, and advanced measures to protect data integrity.

### Bank of America

Oct 2018 - Oct 2019

Cloud Engineer

Dallas Tx

- Developed scalable, secure solutions in AWS and Azure using VPCs, Kubernetes, and Terraform for infrastructure as code, resulting in enhanced system reliability and cost reduction.
- Built fault-tolerant architectures incorporating auto-scaling, load balancing, and high availability practices.
- Enforced cloud security best practices through the implementation of IAM policies, encryption, multi-factor authentication, firewalls, and Zero Trust principles.
- Assured compliance with GDPR, ISO, and HIPAA standards by utilizing tools such as Azure Policy and AWS Landing Zones.
- Streamlined deployments and system management by leveraging Terraform, ARM templates, Ansible, and Jenkins.
- Engineered robust CI/CD pipelines integrated with Azure DevOps, Kubernetes, and Docker to enable efficient, automated workflows.

- Deployed and managed containerized applications with Kubernetes and Docker, optimizing auto-scaling policies and persistent storage solutions for reliable environments.
- Managed Linux and Windows systems through installation, patching, upgrades, and troubleshooting to maintain steady operations.
- Automated administrative tasks using Bash, PowerShell, and CLI scripting to boost operational efficiency.
- Utilized AWS CloudWatch, Azure Monitor, and Splunk for proactive monitoring, performance tuning, and cost optimization.
- Configured alerts and dashboards to secure operational visibility and resource efficiency.
- Designed disaster recovery strategies with Azure Site Recovery and AWS Region Pairing to ensure system resilience.
- Implemented backup solutions via Azure Backup and lifecycle policies to manage data retention effectively.
- Architected hybrid cloud environments by connecting on-premises systems with Azure using VPN gateways, ExpressRoute, and Azure Stack.
- Optimized cloud spending with tools like Azure Cost Management, AWS Trusted Advisor, and reserved instance planning.
- Recommended right-sizing, auto-scaling, and serverless solutions to achieve operational cost efficiency.
- Led migrations of legacy systems to Azure and AWS, ensuring minimal downtime and improved performance.
- Modernized workloads using Azure Migrate, Data Migration Services, and Snowball.
- Collaborated with cross-functional teams to deliver tailored solutions, mentor junior engineers, and lead client engagements.
- Contributed to agile development cycles to ensure iterative, high-quality service delivery.

## **Essia Health**

**Jan 2017 - Sep 2018**

*DevOps Engineer*

*Chehalis, Wa*

- Built, automated, and managed CI/CD pipelines using Azure DevOps, ensuring efficient application and infrastructure deployments, which improved deployment speed and reliability
- Automated infrastructure provisioning and scaling with Infrastructure as Code (IaC) solutions, ensuring consistent and repeatable deployments across environments, which reduced manual errors and deployment time
- Integrated tools like GitHub and Bitbucket with Azure DevOps to streamline version control processes and collaborate effectively across teams, resulting in a 20% increase in productivity and improved code quality.
- Implemented and configured tools like Azure Monitor, Application Insights, and Log Analytics to track performance, optimizing CI/CD processes and improving system monitoring
- Collaborated with development and cross-functional teams to successfully integrate DevOps processes into the SDLC, enhancing service delivery and improving project completion times.
- Implemented security best practices in pipelines, code, and infrastructure using Ansible and Terraform, enhancing system protection against vulnerabilities
- Designed cost-efficient, reliable cloud solutions using Azure and AWS, aligning with business requirements to optimize resource utilization

## **Salosilver Healthcare LLC**

**Jan 2008 - Jun 2015**

*System Administrator*

*Dallas, Tx*

- Reduced incident response times by documenting, tracking, and resolving problems using Salesforce ticketing software, including conducting root cause analyses and prioritizing fixes with Engineering.
- Installed, configured, and managed Windows servers, user accounts, group policies, backups, and security updates, enhancing system reliability and security
- Monitored performance, logs, and security events, which helped in early detection and resolution of potential issues
- Performed server imaging, OS installations, RAID configurations, VLAN setups, and managed hardware like KVM and network cabling, ensuring efficient and reliable infrastructure setup
- Built automation to prevent recurring issues, optimize service operations, and aggregate metrics for actionable insights, resulting in streamlined processes and reduced manual intervention
- Supported and documented system requirements, change control, release management, and operational workflows, leading to streamlined processes and improved system reliability
- Defined and met SLOs for availability, performance, and incident resolution by analyzing logs and recommending improvements, resulting in enhanced system uptime and performance
- Provided recommendations to improve IT infrastructures and workflow productivity, ensuring secure and efficient operations, which led to increased system security and operational efficiency

## **Education**

### **University of Calabar**

*Bachelor of Science, Information Science and Support Services*

### **Lagos City Computer College**

*Diploma, Computer Programming*
