SUMMARY

- About 12 years of experience developing web applications and working on every stage of application development right from collecting requirements, providing guidelines for design, creating application architecture, implementation that includes various stages in development, QA, code signing and releasing to Market.
- Experience coordinating with onsite and remote team members to resolve issues in a fast-paced environment.
- Ability to efficiently translate algorithms, ideas and concepts to software applications
- Experience developing web applications with SPA (Single Page Application) frameworks like Angular.
- Frontend/UI/Web experience with HTML/HTML5, CSS/CSS3/SCSS, Bootstrap, JavaScript, **React JS, Redux, Angular 7+, NgRx, Vue JS, and Vue 2/3.**
- Extensive experience in developing modern applications using various JavaScript frameworks like **Angular, NextJS, Typescript, NodeJS, and NestJS.**
- Developed application using **AngularJS, ReactJS, Next.js, NodeJS**, JQuery, HTML5, CSS and AJAX, **Struts**, which communicated with Java, SPA using Restful web services plus AJAX and **Angular**, UI panels using **JSF, DOJO and JQUERY.** Used **JSP** layout for view of **Spring MVC.**
- Experience in deploying applications with Cloud Services by creating a simple Cloud Service with Visual Studio, testing it locally, deploying to a live Microsoft Azure Cloud environment and Amazon Web Services (AWS).
- Created full Lambda pipeline applications for implementing serverless application through **AWS API Gateway.**
- Involved in design and development of serverless micro services architecture using API Gateway, **Lambda** (by making use of use existing APIs) and using **DynamoDB.**
- Used real-time search and analytics engine Elasticsearch as a metrics data store and use its aggregations to answer queries, such as reporting and plotting graphs in dashboard for horizontal scalability and high performance.
- Experience in configure and managing Amazon AWS Cloud Services, **EC2, S3, ELB, RDS, SNS, SQS, Lambda, Cognito, Route53, AWS Code Deploy, AWS Code Commit,** Serverless Deployment.
- Used real-time search and analytics engine **Elasticsearch** as a metrics data store and use its aggregations to answer queries, such as reporting and plotting graphs in dashboard for horizontal scalability and high performance.
- Developed a microservice for getting real-time data from social networks and other data providers and pushing them onto **RabbitMQ.**
- Quick learner with advanced problem-solving skills and Creative.

EDUCATION

09/2009 - 12/2012

• Bachelor's degree, Computer Science and Engineering
Ulsan National Institute of Science and Technology

INDUSTRY EXPERTISE

Project Management

Team Leadership

EXPERIENCE

01/2013 - Present

Atlanta, Georgia

Senior Full Stack Developer

BrainstormUSA

🌐 brainstormusa.com

Joined the BrainstormUSA IT to manage and control various global-scale projects using well-defined project management and development methodologies.

- ☒ Collaborated with UX/UI designers to translate wireframes and designs into functional web components.
- ☒ Implemented advanced features such as real-time data updates and complex state management.
- ☒ Optimized application performance, achieving faster load times and smoother interactions.
- ☒ Collaborated with database administrators to optimize query performance and database schemas.
- ☒ Designed and implemented a large-scale, dynamic front-end application using Angular, focusing on a seamless user experience and efficient data handling
- ☒ Implemented efficient project builds with Webpack and set up comprehensive test suites
- ☒ Created a responsive application UI using React and the component libraries I created with support for switching between Microsoft Azure and Google Cloud APIs.
- ☒ Built large scale food platform using Next JS, Typescript, Nest JS ensuring high performance and deployed successfully.
- ☒ Architected and implemented a scalable microservices infrastructure using Node.js and Express.js, reducing latency and improving overall system reliability
- ☒ Utilized Vue.js for frontend development, creating a modular and maintainable customer portal with an intuitive user interface.
- ☒ Led a team in adopting Nest.js for building a robust authentication and authorization system, ensuring secure data handling and compliance.
- ☒ Built large scale fintech application using Angular frontend and Hapi for providing MVP to investors
- ☒ I enhanced a fintech business that required Java-based full stack technologies and AWS cloud services.
- ☒ I assisted a health insurance company in developing HIPAA compliance applications with 20+ projects using Spring Boot 2.x, Java 7+, AngularJS, Angular 7+, Azure, AWS serverless stack, and other technologies.

EXPERIENCE

05/2013 - Present

Norcross, Georgia

Full Stack Developer

Fund My Contractor

fundmycontract.com

Fund My Contract connects small to midsize merchants with multiple lenders through a single, easy-to-use application. We offer reliable consumer financing solutions in a tech-driven community focused on shared value.

- ✓ I spearheaded the integration of a third-party payment gateway into our banking application using Java. This involved designing and implementing robust APIs to facilitate seamless transactions while adhering to PCI-DSS compliance standards.
- ✓ Through meticulous testing and optimization, we significantly enhanced the application's performance and reliability, resulting in improved user satisfaction and increased transaction volumes.
- ✓ I developed a comprehensive financial analytics platform using Angular for the frontend and Node.js for the backend. This platform provided real-time insights into market trends, risk assessment, and investment opportunities.
- ✓ Collaborating closely with financial analysts and stakeholders, I led the development efforts from conception to deployment, ensuring the platform met stringent security and regulatory requirements.
- ✓ I contributed to the enhancement of our client-facing web portal, leveraging React to revamp the user interface and streamline the account management process.
- ✓ By implementing responsive design principles and optimizing frontend performance, we achieved a notable increase in user engagement and retention rates.
- ✓ I actively participated in cross-functional teams, collaborating with UX designers, QA engineers, and product managers to iterate on features and address customer feedback effectively.
- ✓ Through agile methodologies such as Scrum and Kanban, we maintained a rapid development pace while ensuring alignment with business goals and priorities.

01/2022 - 01/2023

Alpharetta, Georgia

Project Manager

Fintech - Confidential

A start-up accelerator platform, artificially intelligent and built to enhance the wellbeing of next generation consumers. It was built to digitally empower consumers to gain financial stability. It is a movement where everyone wins, including environment and society.

- ✓ Implemented manual workflows, such as account onboarding, loan processing, and fraud detection.
- ✓ Worked with cross-functional teams to identify and implement automation opportunities with the latest fintech automation trends and technologies
- ✓ Maintained the underwriting platform, increasing the number of applications processed without increasing the amount of manpower
- ✓ Designed the system based on Spring MVC architecture, developed a business logic layer using Spring DI and client side Java-beans for DAO Design Patterns.
- ✓ Implemented Object-relation mapping in the persistence layer using Hibernate in conjunction with Spring, worked on development Hibernate including mapping files, configuration file and classes to interact with the database.
- ✓ Developed JMS messaging components to handle asynchronous messaging from queues using Tibco EMS and Spring JMS.
- ✓ Involved in writing application level code to interact with APIs, Web Services using JavaScript, Ajax, JSON, XML, AngularJS, NodeJS and jQuery.

EXPERIENCE

05/2019 - 05/2023

São Paulo, Brazil

Full Stack Developer

ExitLag

exitlag.com

ExitLag ensures better and faster connection routes to game servers, eliminating connection issues with a single button press, and brings an end to Lag, Ping, Packet Loss and Jitter issues by patching you through the optimal route in real time.

- ✓ Built rich prototypes and MVP applications using HTML, CSS, JavaScript, jQuery, Ajax, JSON, AngularJS, Bootstrap and Node.js frameworks (Hapi, Express.js).
- ✓ Developed the latency monitoring platform with React.js, Next.js, Nest.js with SequelizeORM, and GraphQL.
- ✓ Built and improved Rust/Golang based serverless backend API codes with high demanding microservices.
- ✓ Written Spring Core and Spring MVC files to associate DAO with Business Layer.
- ✓ Built and improved Rust/Golang based serverless backend API codes with high demanding microservices.

05/2014 - 05/2019

Seoul, South Korea

Software Developer

Must Fintech

MSQUARE MARKET is a blockchain based marketplace based on Crypto Tokens managed by Companies GlobalMSQ and Must Fintech. The purpose of MSQUARE MARKET is to offer crypto asset acquisition like Binance and WEMIX wallet, Crypto Assets Management and for Crypto Assets Utilization in services such as Buy/Sell Online (E-commerce, Coin mining via cards) and Real Estate.

- ✓ Successfully finalized front and backend functionalities for Moyamo mobile application and admin panel, the premier plant-searching application with over 1.5 million downloads, and seamlessly migrated the entire system to Flabook using AngularJS in creating animations based on CSS classes, Angular 7, Node.js for serverless API with Lambda, Java 7/8/17, Spring Boot, JPA, JavaEE, JSP (Thymleaf), AWS services, RabbitMQ, Redis, and Elasticsearch.
- ✓ Orchestrated comprehensive user-generated content (UGC) updates for Flabook, integrating advanced features like user blocking, listing, and unblocking through Elasticsearch, Redis, RabbitMQ, Boolean junctions, and scheduler services.
- ✓ Developed Message Driven Beans for asynchronous processing of alerts.
- ✓ Used JMS-MQ Bridge to send messages securely, reliably and asynchronously to Web Sphere MQ, which connects to the legacy systems.
- ✓ Developed the credit check module using Servlets and JSP Core Java components in Web logic Application Server.
- ✓ Worked on various different projects writing HTML, CSS and JavaScript based on provided designs to get web sites and web applications built within a team atmosphere.
- ✓ Authored documentation and managed code review, release, and change processes.

SKILLS

Languages / Frameworks / Libraries

HTML / HTML5		CSS / CSS3		JavaScript		TypeScript		Java		Spring Boot		Hibernate		JUnit			
Bootstrap		Express.js		Hapi		Koa		Nest.js		AngularJS		Angular 7+		Next.js		React.js	
Node.js		jQuery		Redux Thunk / Saga				Antd		EJS		Vue					

SKILLS

Tools / Platforms

Mycrosoft Visual Studio	Webpack	Docker	Jira	Git	WebStorm	RabbitMQ	Elasticsearch
Ubuntu	Heroku	Azure	Kubernetes				

Other

Amazon S3 (AWS S3)	SQLite	Azure Cosmos DB	MySQL	MongoDB	PostgreSQL		
Microsoft SQL Server	Redis	MariaDB	Code Review	Software Design	WebSockets		
Project Planning	Software Architecture	AWS Cloud Architecture	Cloud Infrastructure				

PROJECTS

Global MSQ

📅 05/2014 - 05/2019 📍 Seoul, South Korea

Built UI and REST APIs for Moyamo (aka Flabook) mobile application and frontend/backend for admin panel using Angular 7, React, Node.js (serverless), Spring Boot 2.2.7 / 2.7.3, JSP, Thymleaf, AWS services (RDS, EC2, S3, CloudFront), Elasticsearch, Redis, RabbitMQ, and integrated web3 functionalities including smart contracts.

- Refined the design patterns for development and maintenance and spurred a remarkable 110% surge in user engagement.

ExitLag Game Latency Monitor

📅 05/2019 - 05/2021 📍 São Paulo, Brazil

Developed the latency monitoring platform from scratch using Next.js, Nest.js w/ SequelizeORM, and GraphQL.

- We'd say Exitlag has developed by gamers, for gamers, We implemented a proprietary technology that optimizes data routing by instantaneously mapping out various routes and sending the packet through the optimal one! In case one route becomes unstable, the others kick in keeping the game connection unphased.

eAssist Dental Hub

📅 01/2019 - 01/2021 📍 Salt Lake, UT

Revolutionized the outdated hub system catering to eAssist dentists, staff, insurance companies, and patients, originally constructed on Spring Boot 2.2.7, through a seamless upgrade to Spring Boot 2.4. Implemented a modern serverless API architecture and introduced a cutting-edge WoW point system to evaluate staff performance, powered by AWS Lambda (Claudia.js) and Angular 7 (with partial integration of Vue.js).

- Achieved a remarkable enhancement in site loading speed and overall management performance, boasting an impressive 220% improvement. These optimizations ensure a smoother user experience and heightened operational efficiency across the platform.
