

Dayo Adepoju | (972-4395051) kennylat@gmail.com

Bachelor of Science (BSc)

June 2004

Chemical Engineering

Certificate in Cybersecurity

June 2019

OBJECTIVES

- Skilled Cloud Computing Engineer has exceptional development ability and extensive knowledge of Cloud Computing Technology, has excellent analytical and problem-solving skills and a strong ability to work with minimal supervision.

TECHNICAL SKILLS:

- Cloud Platforms: Azure, Windows Server.
- Azure Expertise: IaaS, PaaS, VM Migrations, VNet, Traffic Manager, Azure Cloud Services, SQL Azure, Active Directory, Data Lake, ExpressRoute, Power Shell, OMS, Security Center, Intune – SCCM, Service bus, blob storages
- Active Directory, Azure Active Directory, Azure AD Connect
- Docker Container Management and Kubernetes
- Database experience with MySQL, Azure SQL and PostGres, CosmosDB, Microsoft SQL Server, Oracle, Sybase, MongoDB
- Programming Languages: C#, Python, JavaScript, VB .NET, VB, XAML, SQL, TSQL, PL SQL
- Artificial Intelligence: Azure Cognitive Services, Azure Bot Framework, Azure Machine Learning Studio
- DevOps Tools: Azure DevOps, Jenkins, Scripting with Powershell, Terraform, Linux
- System Integration Tools: SSIS, NServiceBus, Data Factory
- Reporting Tools: SSRS, Crystal Reports, Jasper Reports
- Mobile Development Platforms: Xamarin, IONIC, Meteor, Angularjs, Kivy, PyGame
- Web Development Frameworks: ASP.Net, ASP.NET Core, Flask, Django, Angularjs, Nodejs

- UML Modeling Tools: UMLet, Sparx Enterprise Architect, Visual Studio, Visio

Certifications

- AZ-303: Microsoft Azure Architect Technologies
- AZ-305: Designing Microsoft Azure Infrastructure Solutions
- AZ-500: Microsoft Azure Security Technologies

WORK EXPERIENCE

Tata Consultancy Services

April 2021 – Present

Azure Cloud Architect

- Managing Client azure environments with infrastructure as code
- Experienced in Azure Confidential Computing (ACC), Azure Container Instances (ACI), and Azure Kubernetes Service (AKS) with a focus on Trusted Execution Environment (TEE) configurations and confidential inferencing
- Successfully led the migration of on-premise applications and infrastructure to Azure, ensuring minimal downtime and seamless transition across multiple environments.
- Developed comprehensive cloud migration strategies, including workload assessments, phased migration plans, and risk management approaches to ensure smooth transitions.

- Designed and implemented scalable, secure, and cost-efficient Azure architectures covering IaaS, PaaS, and SaaS, aligning with industry best practices for optimal performance.
- Executed application modernization initiatives, including re-platforming and re-hosting legacy applications to cloud-native solutions, resulting in improved scalability and efficiency.
- Architected end-to-end integration solutions using Azure Integration Services (Logic Apps, Service Bus, and Event Grid) to automate workflows, ensure reliable messaging, and facilitate real-time data synchronization across diverse systems.
- Optimized Azure infrastructure for performance, cost-efficiency, and high availability while ensuring adherence to Azure security and governance standards.
- Led the use of migration tools such as Azure Migrate and Azure Site Recovery (ASR) to automate and streamline the migration process, reducing manual errors and migration time.
- Managing Kubernetes environment production and Non-production
- Managing Key Vault for all lower environments and production in the client cloud environment
- Configured and managed Azure AD B2C with SAML SSO and OAuth 2.0 for secure authentication and authorization across cloud environments
- Managed the full software development lifecycle using GitLab, including source code management, continuous integration (CI), and continuous deployment (CD) pipelines, enhancing team efficiency and reducing deployment times by 30%
- Proficient in authoring and deploying Azure ARM JSON Templates to automate the provisioning and management of resources in Azure environments, ensuring consistent and repeatable deployments.
- Deep understanding of Triton client libraries, Confidential Container Instances, and implementation of Sidecar/Confidential sidecar instances for Azure Container Registry and Confidential Clean Room

- Experienced in parameterizing ARM Templates to allow for customization and reusability, promoting operational efficiency and adherence to organizational standards across multiple projects
- Providing technical support for gitlab CI related issues, Git Bash for version control and collaborative teamwork. Setting up SonarQube for code quality check.
- Assisting the team troubleshoot application issues on kubernetes cluster
- Assisting with research based solutions on upcoming services and how it will be managed with best practices standard in Azure environment
- Experience setting up monitoring for aks clusters (dynatrace, splunk). Used Prometheus to monitor Kubernetes Services.
- Migration of code from Harvest to Bitbucket and setting up the repository based on company's branching strategies.
- Extensive experience working with the .NET framework to design, develop, and deploy robust applications. Proficient in utilizing various .NET technologies and libraries to create efficient and feature-rich software solutions
- Creating build and release pipeline using Jenkins for Dev, SIT and UAT.
- Setting up Veracode on the Jenkins job for both pipeline and policy scan.
- Deployment of build code into WebLogic and setting up the necessary automated .ps1 scripts. ServiceNow Integrations with Azure DevOps Pipeline.
- Implementation of Thycotic on the deployment scripts to fetch credentials.
- Integration and Management of Redis Session with Azure and Azure DevOps Pipeline
- Authoring Test Automation using Eggplant
- Perform hands-on activities involved in creating cloud infrastructure components.
- Used PowerShell Scripting and automation to move workloads and improve operations and support
- Strong expertise in creating and maintaining confidential computing environments and ensuring data protection.

- Using Terraform to create staging environment and destroy same after application testing to manage Azure cost
- Automated the release pipeline to achieve zero touch deployments using Azure DevOps

BNSF Railway

January 2015 – April 2021

Azure Cloud Architect

- Installed and configured IIS web server on Microsoft Windows 2012/2012R2 /2016 server accordingly
- Securing Azure Infrastructure using Azure Security Solutions; Azure Sentinel, Azure Application Gateway, Front Door, NSGs, Azure Firewall, and WAF Firewall Policies and Monitoring Infrastructure wide Security using Azure Security Centre.
- Collaborated with cross-functional IT teams and stakeholders to ensure project timelines were met and provided clear communication on migration progress and roadblocks.
- Deploy Terraform configuration alongside Azure DevOps repos and configure Azure DevOps pipeline to use these to create the application environment
- Worked on Azure container monitoring solution to send docker logs to Azure log Analytics
- Assisted with cleaning up Azure firewall rules using resource graph queries
- Setting up monitoring for AKS clusters (dynatrace, splunk)
- Implemented ADO docker agent logs to Azure log Analytics using Logstash
- setup a CI/CD pipeline that deploy application to Azure Kubernetes Cluster
- Automation of the entire DevOps of Application Development Process
- Solution Architecture using Cloud technologies, Azure IaaS and PaaS resources
- Designed and Deployed Azure IaaS virtual machines (VMs) and Cloud services (PaaS role instances) into secure VNets and subnets.

- Automated the release pipeline to achieve zero touch deployments using Jenkins, ansible, dockers.
- Setting up Azure active directory permissions for the Team and managing all infrastructure support services
- Managed IP Forwarding for VMs and role instances acting as virtual appliances.
- Setup Azure Virtual Appliances (VMs) to meet security requirements as software-based appliance functions (firewall, WAN optimization and intrusion detections).
- Configure Kubernetes Cluster on Azure using Terraform
- Associated routes with Virtual networks via the route table per relationship constraints.
- Monitor Azure Infrastructure through System Center Operation Manager (SCOM).
- Manage and Create Storage Account and Affinity Group in Azure Portal.
- Capture an image of a Virtual Machine. Attaching a Disk to a Virtual Machine. Manage and create Virtual Network and End Points in Azure Portal.
- Drive end to end deployment of various Components on the Azure Platform
- Developed PowerShell scripts and ARM templates to automate the provisioning and deployment process
- Configured VM networking with reserved IPs, Health Monitors, Firewall rules, VM scale sets and availability sets in the Azure Cloud.
- Developed Ansible to manage Web applications, Environments configuration Files, Users, Mount points and Packages. Implemented Continuous Integration using Jenkins and GIT
- Deployed VNETs and Site-Site VPN using PowerShell and deployed VMs into various Subnets and enabled communication between Subnets.
- Replicated VMware VMs to Azure with Site Recovery.

Citigroup

Jan 2010– December 2014

Cloud Software Engineer

- Full lifecycle application development management
- Developed the application using ASP.Net Web Forms, Classes using C#.NET that incorporates both N-tier architecture and database connectivity.
- Software analysis, code analysis, requirements analysis, software review, system risk analysis, software reliability analysis
- Proficient in full-stack Java development including Java, J2EE, Spring, and Java Server Pages, complemented by expertise in Maven build tools.
- Extensive front-end experience leveraging HTML5, CSS3, SASS, Bootstrap, JavaScript (ES5/ES6), JQuery, AJAX, Angular, Typescript, and associated UI frameworks with NPM for package management.
- Leading the support, maintenance, and documentation of software functionality
- Designing, developing, and debugging software, report design and development
- Ensure software testing and quality assurance
- Experience on Power Shell scripts to automate the system creation including end-to-end infrastructure, VMs, storage, firewall rules
- Deploying and operating scalable, highly available, and fault tolerant systems on Azure
- Administered user accounts, modification, and deletion according to the environment in Active Directory.
- Working experience on PowerShell scripting And MS Web Deploy for creating Websites.
- Designed and developed web site and intranet applications using Visual Studio 2017, .Net CORE 1.0, 2.0 Framework to implement Business Logic, ASP.NET Core, MVC 4/5 Ra
- Designed, developed, and maintained business enterprise solutions as mobile, windows, web or distributed application
- Work with Forests and Domains; Restructuring a Forest and Renaming Domains

- Working and Maintains the Group Policy infrastructure based on the policies and guidelines provided
- Created event driven Web Forms using ASP.NET and implemented form validation using Validation controls using both Custom validation and JQuery was written for Client-side validations
- Work on a highly secure environment using RSAT tools. Global Catalog Servers & Schema
- Assist in management and support of internal and external DNS systems. Assist in management and support of internal DHCP architecture and scoping
- Create and administer Email address policies, Retention policies and ActiveSync policies in the O365 tenant.
- Provisioning users to the O365 tenant, Administering ADFS and DirSync for SSO (Single sign on)
- Using Azure PowerShell to automate admin task in the O365 /Microsoft cloud
- Maintaining and Managing the websites. Building Enterprise Web Applications.
- Developing changes for previously developed and deployed ASP.NET Web Sites that performs the function e-commerce sites for different documents and printing items the company offers to their clients, items related with clients' products, this sites also manage different internal configurations, stock administrations, security and audience settings
- Implementation of a self-initiative internal Admin portal (NodeJS) and a business-to-business communication interface/API (NodeJS, ExpressJS). As a result, achieved maximum developer efficiency in troubleshooting environmental issues.
- Implementation of a Web Portal (Angularjs, Bootstrap 3, HandleBars, Azure, Docker) and a range of Microservices/APIs (NodeJS, ExpressJS) to host documents for
- Develop stateless RESTful API for multiple clients; web, single page applications, mobile applications etc.

- Implement coding standards and refactoring to ensure flawless code.
- Built APIs with Node.js, Express, MongoDB, Mongoose, GraphQL
- Documented API using Swagger specifications.
- Used route protection with Passport framework, Bcrypt and JSON Web Tokens (JWT) to secure APIs.
- Used other databases like PostgreSQL, MySQL, Microsoft SQL and their drivers for Node.js application.
