City/State: -Flower

Mound / TX

CAREER SUMMARY:

- Almost 8+ years of proved, strong experience in DevOps, Cloud, Build & Release and Linux Administration on Unix/Linux based System Administration working on different environment including Red Hat (6.x,7.x), and Windows platforms.
- Expertise in developing Automated solution for entire build and release process and implementing effective methods for Continuous Integration and Continuous Delivery platforms.
- Installed, Configured and Administered Jenkins Continuous Integration Tool. Experience with repository tools like Artifactory.
- Experience in build and packing microservices using docker files into docker images. Good understanding of Docker Technology and Docker Swarm.
- Good understanding of the principles and best practices of Software Configuration Management (SCM) in Agile, scrum, and Waterfall methodologies.
- A good understanding of code and script (Bash, Python)
- Designed AWS CloudFormation templates to create multi region Web applications and databases.
- Deep experience with provisioning on the AWS cloud platform including EC2, S3, Autoscaling, Security groups, VPC, IAM, Redshift, Cloud Trails, Lambda functions, ES, RDS, DynamoDB, CloudFront, Route53, Secrets Manager, Certificate Manager, Elastic Load Balancer, EBS, Cloud Watch and other related technologies.
- Experience in writing playbooks in Ansible and Ansible Tower as Configuration management tool, to automate repetitive tasks, quickly deploys critical applications, and proactively manages change.
- Experience on Chef architecture and chef concepts such as nodes, workstation, chef server, recipes, resources, cookbooks, environments, roles.
- Used AWS Redshift with AWS Glue implementing ETL processes, and developing data and metadata service components
- Experience on infrastructure as code with Hashi Corp Terraform tool by operating AWS infrastructure through Terraform and Terraform Enterprise (TFE) by writing Terraform scripts, modules.
- Experience on Hashi Corp Packer tool in building Packer AMIs.
- Experience in Branching, Merging, Tagging and maintaining the version across the environments using SCM tools like Subversion (SVN), GIT (GitHub, GitLab). Expert in using ANT scripts, Make and Maven for Build process.
- Best Practice in development of consultants by mentoring ITIL best practices for successful Delivery of Projects and recruiting the best talent for current and future requirements.

- Experience in Java/J2EE/.Net and managing Software Configurations and Builds in a UNIX Environment. Experience in Deploying to and administering the use of JBoss, Tomcat, WebLogic.
- Experience on handling Firewalls, IDS/IPS in enterprise services and Denial of Service attacks (DOS) & DDOS (Distributed Denial of Service attacks)
- Experience in maintaining all Confluence Spaces and JIRA projects, workflows, permissions, users, Groups etc. and experience on Atlassian tools like Bitbucket, JIRA, Bamboo.
- Experience with SQL and MySQL, NoSQL (Redis)

Professional Experience:

EXPERIENCE:

AAA-The Auto Club Group Coppell, TX
Nov 2019 – Present

Job Title: - DevOps, UNIX, Linux and cloud engineer

Responsibilities:

- Involved in designing and deploying multitude applications utilizing most of the AWS environments (Including EC2, Route53, S3, RDS, IAM) focusing on high - availability, fault tolerance, and auto-scaling via Terraform and TFE.
- Configured AWS IAM and Security Group in Public and Private Subnets in VPC.
- Created AWS Route53 to route traffic between different regions.
- Setup and build AWS infrastructure various resources like VPC, EC2, S3, IAM, EBS, Security Group, Auto Scaling, and RDS using Terraform.
- Enabled centralized logging for detailed traceability and visibility into the system using AWS CloudWatch Logs, AWS X Ray and AWS Lambda.
- Worked with Terraform for automating VPCs, ELBs, security groups, SQS, S3 buckets.
- Automated deployment of builds to different environments using Jenkins
- Defined branching, labeling, and merge strategies for all applications in Git.
- Utilized Configuration Management tool like Chef & created Chef Cookbooks using recipes to automate system operations.
- Cleaned and categorized the data with AWS Glue and made it available to search.
- Built and Deployed Docker images on AWS ECS and automated the CI-CD pipeline.
- Hands on experience on Terraform a tool for building, changing, and versioning infrastructure safely and efficiently.
- Used Slack as a communicator within the team and with other teams.
- Deploying and maintaining microservices using Docker. Experience in writing basic Docker files to startup instance and run applications.

- Managed AWS infrastructure using Infrastructure as a code tool Terraform by writing various modules, templates.
- Built Automation and Build pipe line development using Jenkins and Maven. Setup Jenkins master and added the necessary plugins, installed, configured and administered Jenkins as Continuous Integration Server on Linux machines. Implemented the setup for Master Slave architecture to improve the performance of Jenkins.
- Coordinated and assisted the developers in establishing and applying appropriate branching, labelling/naming conventions using GIT source control.
- Deploy multi-account, multi-region solutions through AWS CloudFormation, AWS Code Pipeline.
- Designed highly scalable and fault tolerant, highly available and secured, distributed infrastructure (IAAS) using EC2 instances, EBS, S3, RDS, ELB, Auto Scaling, Lambda, Redshift, DynamoDB etc. in AWS Cloud.
- Used Bitbucket for repo creations, Clones, Repository permissions, Forking, Branches, Pull Requests, merge changes to release and master branches.
- Used AWS Glue API operations to interface with AWS glue services.
- Configured the AWS ALB to route the traffic from target group to right targets on AWS ECS.
- Build JFrog artifacts are deployed into Tomcat instances and were integrated using Python and Shell scripts.
- Used Service Now & JIRA as a ticketing tool for various service requests from different teams.
- Used Quip tool for documenting all the procedures and onboarding process.
- Responsible for implementing and administrating the containers in RedHat OpenShift and Kubernetes platform.
- Strong experience in cloud architecture, infrastructure design, and deployment including experience with Aws and Azure PaaS and IaaS services.
- Planning ERP Cloud instance strategy for SaaS and PaaS PODs.
- Develop Python, bash and groovy script as part of automation.
- Create EPIC, Issue and sub task in Jira to track the work flow as part to Agile process.
- Involved in implementing, supporting and troubleshooting database and middleware application like JBoss, WEBSPHERE, Oracle, DB2, Big Data, Guidewire, MuleSoft, Tableau.
- Automated performance testing tools like Apache JMeter can help in regularly assessing the application's performance.
- Perform automated and manual security assessments to identify configuration and patch related vulnerabilities using commercial and open-source tools
- Create custom reporting dashboard to show the trending on Helm.
- Identify vulnerabilities, research best practices, recommend steps for strengthening the IT security posture of the organization and participate in the hands-on management/monitoring of core IT infrastructure.
- Installation, upgrading and configuration of AIX 6.1 OS on IBM power Servers using NIM.

- Worked on migrating OS from AIX 5.3 to 6.1 and worked on TL upgrades on many servers.
- Worked in a LOB environment consists of 500+ servers.
- Performed automated installations of Operating System using kickstart for Red Hat Enterprise Linux.
- Worked on patching (along with software management) using Red Hat Satellite.
- Applied Knowledge of installation, configuration of various services like SSH, SFTP, DNS, CIFS, Samba, NFS, SSH, HTTP etc.
- Extensively used Logical Volume Manager (LVM), creating physical volumes, volume groups, logical volumes, and disk mirroring both in AIX/Linux environment.
- Create, extend, reduce and administration of Logical Volume Manager (LVM) in AIX/RHEL environment.
- Troubleshooting and resolving of problems related to hardware, operating systems, third party applications.
- Worked extensively on planning and configuration of LPARs on IBM P-Series servers.
- Worked on remediating servers based on Symantec Enterprise Security Manager reports.
- Provided On call Support for RHEL (running on VMware) server environment.
- Worked on upgrading HMC (Hardware Management Console).
- Written shell scripts to automate the administrative tasks using BASH scripting.
- Installed NETBACKUP client software on AIX/RHEL servers and worked on setup of Tivoli Alerts for monitoring the servers.
- Installation, configuration, and administration of WebSphere, JBoss and tomcat on AIX/RHEL servers.
- Performed Production Readiness Checks (PRCs) on newly built AIX/Linux servers before transitioning to Production Team support.
- Attended team meetings, change control meetings to update installation progress and upcoming changes in environment.

Rite Aid (Contracting)

Jan 2015 – Oct 2019

Title: DEVOPS Engineer.

- Built strategies like canary deployments, feature flags, and rollback plans to minimize risks with new releases and keep services running without interruption.
- Successfully upgraded RHEL 6.x servers to RHEL 7.x using Ansible and documented the whole process.
- Written and maintained multiple SHELL scripts and Ansible Playbooks to automate daily jobs and managed the alerts of the running services.
- Working on writing shell and Python scripts to automate things as per requirement like automating disk space, STALE partitions on AIX servers, ciscoampconnector.

- Created repositories in GIT using GIT bash. Worked on commits, pull, push and branch creation and merges and clone.
- Implemented AWS Lambda functions to run scripts in response to events in Amazon Dynamo DB table or S3 bucket or to HTTP requests using Amazon API gateway.
- Created and maintained Highly Available and Fault Tolerant infrastructure in Amazon VPC using EC2 with Elastic load balancing and Auto scaling groups in AWS cloud.
- Worked on Ant build tool for compile, package and deploy and test case run of java files.
- Set up Jenkins server and build jobs to provide continuous automated builds based on polling the SVN source control system during the day and periodic scheduled builds overnight to support development needs using Jenkins, JUnit, Selenium and Maven.
- Migrated VMWARE VMs to AWS and Managed Services like EC2, SCS, S3, Route53, VPC, ELB, EBS, SNS, SES, Glue, RDS etc., with Opcode Chef Cookbooks/Recipes.
- Jenkins - automates the provisioning and configuration for all of the Jenkins Continuous Integration Server including plugins, jobs, server configuration, etc.
- Working on BMC remedy tool to raise the technical issues like getting access to UNIX and AIX servers and various roles according to the requirement.
- Working on ticketing tool JIRA for creating Projects, assigning permissions to users and groups for the projects & Created Mail handlers and notification Schemes for JIRA, assigning due dates, start date and estimated time for the project.
- As part of AWS Glue/Kinesis training created end-to-end ETL workflow for Netezza-to-Redshift data migration POC.
- Dockized all the service and applications and migrated these running services to containers.
- Created the environment for Docker Migration using Ansible.
- Worked on Docker hub, creating Docker images and handling multiple images primarily for middleware installations and domain configurations.
- Handled in creation of custom Docker Container Images, Tagging, Pushing the images.
- Created Cloud based hosting solutions (AWS-EC2/S3, Azure, Open Stack).
- Handled AWS services preferably (CloudFormation, Lambda, API Gateway, EC2, ECS, AWS Elastic Beanstalk (App deployments), ELB, S3 (Storage), EBS (Persistent disk storage), VPC, VPN, ELB, RDS, Route 53 and auto-scaling etc.)
- Configuring and Networking of Virtual Private Cloud (VPC).
- Used IAM to create new accounts, roles and groups.
- Monitored AWS infrastructure using AWS CloudWatch and configured Splunk to monitor real-time granular metrics of all the AWS Services and configured dashboards for each resource agents.
- Installed and Configured NGINX for the running Services.
- Installed and configured the Jenkins. Created jobs to be deployed on to the containers.

- Created local, virtual repositories in Jfrog Artifactory and integrated with Jenkins.
- Configured Sonar and integrated with Jenkins for code analysis process.
- Worked on Networking Technologies like Load balancer, Firewall, VIP, DNS.
- Maintained Strong infrastructure automation experience tool VMware.

EDUCATION:

Bachelors of Computer Science, DCET college, Osmania University, India (2009)

TECHNICAL SKILLS:

Core Competencies:	DevOps/ SRE/Linux/Clouds/AWS
Source Control Management Tools:	Gitlab, GitHub, Pipeline, Jenkins, Bitbucket
Monitoring Tools: SCOM, watchdog	Amazon Cloud watch, Prometheus, Grafana, Nagios, Tivoli.
Container Technologies:	Vagrant, Docker, Kubernetes
Platforms:	Linux RedHat/SUSE, Microsoft windows server, AIX
Virtual platform:	VMware, Kubernetes, Dockers, OpenShift
Cloud platform:	AWS,AZURE, Google
Configuration Management tools:	Ansible, Chef, Puppet, ANT, Maven, Terraform
CI/cd Tools:	Jenkins/Hudson, Bamboo, U Deploy
Application server: logic& JBoss EAP, MuleSoft	Apache, Tomcat, WEBSPHERE, WEBLOGIC, SiteMinder, blade
Networking: DHCP, DNS (QIP software)	TCP/IP, Ethernet, FDDI, VPN, OPENSSH, router, switches,
High Available Clustering:	Red-hat, VMware cluster
Database:	Oracle, DB2, Sybase Informix, MYSQL
ERP:	SAP, People-soft, Oracle app, Siebel, SAP
Storage:	EMC, VMAX Array, VNX, Hitachi, Net-App, IBM Storage
Languages:	Unix script, C, C++, HTML, Perl, Python, Rail, Expect, AWK, SED, KSH, PHP BASH. JAVA, DOTNET
SDLC:	Agile, Waterfall
Tracking Tools:	Jira
Artifact management tools:	Sona type Nexus, Cloud Repo
