

IHOR DEMCHENKO

DevOps Engineer

i.demchenko.job@gmail.com | (612) 615-4948 | Elk River, MN 55330

SUMMARY:

- I am a highly motivated DevOps professional (**AWS, Azure, GCP**) with over **10 years of experience** in the industry and a **Master's degree in Computer Science**.
- Experienced in **Information Technology, Financial Services, E-commerce, and Transportation and Logistics** domains with **internal and external** customers in **Europe and United States**
- Hands-on experience in designing and maintaining **microservices-based architecture**.
- Experience with private (**VMware**), public (**AWS, Azure, GCP**), and hybrid cloud environments, and experienced in designing and deploying cloud-native applications and services.
- Skilled in cloud infrastructure and architectural designs and plans Infrastructure as Code (**Terraform, Ansible**) and Policy as Code.
- Proficient in architecting, and implementing end to end CI/CD pipelines with **GitLab, CircleCI, Jenkins, and TeamCity**.
- Experience with Scripting Languages like **Groovy** and **Python**.
- Proficient in Monitoring (**Grafana, Prometheus, Zabbix**) and Logging (**Elasticsearch, Logstash, Kibana**).
- Experienced in building and managing highly scalable, fault-tolerant, and secure production environments using DevOps best practices.
- Proficient in Agile methodologies and experienced in working in Agile teams to deliver software products and services.
- Strong problem-solving and analytical skills, with the ability to identify and resolve complex issues in a timely manner.
- Proficient in building DevOps cultural norms around information sharing and facilitating communication through the use of chat applications, issue or project-tracking systems, and wikis.
- Excellent communication and collaboration skills to work effectively with cross-functional teams
- Flexibility and adaptability to changing requirements and priorities
- Strong attention to detail and a commitment to delivering high-quality work
- Time management and organization skills to effectively manage multiple projects and deadlines

TECHNICAL SKILLS:

Containerization:

Docker, Kubernetes, Amazon ECS

Configuration management:

Terraform, Ansible, CloudFormation

Cloud Technologies:	Google Cloud Platform(GCP), Microsoft Azure Cloud, Amazon Web Services (AWS)
Monitoring:	Grafana, Prometheus, Zabbix, Azure Monitor, Azure Application Insights, and Log Analytics, Stackdriver
Logging:	Elasticsearch, Logstash, Kibana
CI/CD:	GitLab, CircleCI, Jenkins, Teamcity, Azure DevOps pipelines
Scripting:	Bash, PowerShell, YAML, Python, Groovy, Azure CLI, SQL, PL/SQL, T-SQL
Web Server:	Nginx, Apache, Tomcat, NodeJS
Operating Systems:	Linux (RHEL, CentOS, Ubuntu), and Windows (XP/7/8/10/11/2016 Datacenter/2019 server)
Virtual machine:	VMware, Azure Virtual Machines (VMs)
Data bus:	RebbitMQ, Kafka
Database:	MS SQL Server, Oracle 12c/19c, PostgreSQL, MongoDB, DB2
Program languages:	Helm, JavaScript ES5, PHP5/7, C++17, Java
Source management:	GitHub, Atlassian Bitbucket, Azure Repos, AWS Code Commit, GitLab
Other:	Active Directory, DNS, Cloudflare, Postman

EDUCATION:

The National Technical University of Ukraine "Kyiv Polytechnic Institute" 2019
Master of Computer Science

The National Technical University of Ukraine "Kyiv Polytechnic Institute" 2017
Bachelor of Computer Science

EXPERIENCE:

DevOps Engineer Jan'22 – Current
XELON.CH (Zug, Switzerland)

- Designed and implemented on-premises infrastructure using **VMware vSphere** for virtualization and centralized management of resources.
- Developed **Ansible** playbooks for configuration management and automated deployment of infrastructure and applications.
- Implemented **Bitbucket and Jenkins** pipelines for continuous integration and delivery (CI/CD) of applications to on-premises cloud environment.
- Managed and maintained cloud infrastructure at public and private clouds including patches, backups, and scaling policies.
- Configured **Prometheus, Kibana and Grafana** for centralized logging and monitoring of application and infrastructure health, implementing alerts and dashboards for real-time visibility into system health.

- Built and deployed **Docker** containers to break up monolithic apps into microservices and deploy them to **Kubernetes** clusters, improving developer workflow, increasing scalability, and optimizing speed.

DevOps Engineer

Jan'20 - Jan'22

HOME TRUST BANK (Asheville, NC)

- Successfully migrated multiple on-premises systems to the **Azure** cloud platform.
- Designed and implemented infrastructure as code (IaC) using **Terraform** for automated deployment and scaling of **Azure** resources.
- Configured **Azure Virtual Machines (VMs)** for high availability and scalability, utilizing load balancers and auto-scaling groups.
- Implemented **Azure DevOps pipelines** for Continuous Integration and Continuous Delivery (CI/CD) of applications to **Azure**.
- Developed **PowerShell** and **Azure CLI** scripts to automate infrastructure and application deployments to **Azure**.
- Configured **Azure Monitor** for centralized logging and monitoring of application and infrastructure health, implementing alerts and dashboards for real-time visibility into system health.
- Collaborated with cross-functional teams including developers, QAs, and operations to ensure the successful migration of applications to Azure.
- Conducted regular security assessments and implemented Azure security best practices to maintain a secure environment.

DevOps Engineer

May'19 - Jan'20

INNOVECS (Minneapolis, MN)

- Successfully migrated on-premise applications and infrastructure to **Google Cloud Platform (GCP)**.
- Designed and implemented infrastructure as code (IaC) using **Terraform** for automated deployment and scaling of GCP resources.
- Created and maintained fully automated CI/CD pipelines for code deployment using **Helm charts and Circle CI**.
- Built and deployed **Docker** containers to **Kubernetes** clusters to break up monolithic apps into microservices.
- Managed **Bitbucket** repositories and permissions, including branching and tagging.
- Set up **Mongo DB** cluster with data migration from Mongo replica set.
- Developed **Python and Bash scripts** to automate infrastructure and application deployments to GCP.
- Configured **Stackdriver** Logging and Monitoring for centralized logging and monitoring of application and infrastructure health, implementing alerts and dashboards for real-time visibility into the system's health.

DevOps Engineer**Jan'18 – May'19****RAIFFEISEN BANK (Vienna, Austria)**

- Designed and implemented AWS infrastructure for the bank's digital platform, including **EC2 instances**, **S3 buckets**, **RDS databases**, and **Elastic Load Balancers**.
- Developed and maintained automated deployment pipelines using **AWS CodePipeline**, **CodeDeploy**, and **CloudFormation**, resulting in a 75% reduction in deployment time and a 50% reduction in errors.
- Worked closely with development teams to guarantee smooth integration of new features into the platform, including **automated testing** and **code reviews**.
- Implemented automated monitoring and alerting using **AWS CloudWatch**, enabling early detection and resolution of issues before they impact users.
- Developed and maintained AWS security policies and procedures, including **IAM roles and policies**, **S3 bucket policies**, and **VPC network security groups**.
- Conducted regular system reviews and implemented optimization strategies to improve system performance, security, and scalability.
- Participated in the bank's **Agile** software development process, including daily standups, sprint planning, and retrospectives.

Database Developer**Feb'17 - Jan'18****NOVA POSHTA (Kyiv, Ukraine)**

- Designed, developed, and maintained **MySQL sharded databases** for a large-scale logistics system, handling millions of shipments daily.
- Implemented and maintained **MySQL Cluster Manager** for efficient and automated management of MySQL clusters.
- Developed and maintained database **scripts and procedures** for data migration, backup and recovery, and performance tuning, resulting in a 50% reduction in query response time and improved system reliability.
- Worked closely with development teams to confirm the integrity, consistency, and availability of data across multiple applications and environments.
- Collaborated with system administrators to optimize database configurations, storage, and network resources.
- Implemented and maintained data security and access controls, including encryption, authentication, and authorization policies.
- Developed and maintained documentation and best practices for database development and administration.
- Conducted regular database performance reviews and implemented optimization strategies to improve system performance, security, and scalability.

FULL STACK WEB DEVELOPER**May'15 - Feb'17****CHEMIMPEX (Kyiv, Ukraine)**

- Developed and maintained Chemimpex' e-commerce website using a variety of front-end and back-end technologies, including **HTML, CSS, JavaScript, Angular, Node.js, and MongoDB**.
- Worked closely with the design team to implement user-friendly and responsive designs. Used responsive design techniques to secure that the website was optimized for all devices, including desktops, tablets, and mobile phones.
- Collaborated with the marketing team to implement SEO best practices, such as optimizing page titles, meta descriptions, and URL structures, to improve the website's visibility on search engines.
- Implemented various e-commerce features, such as a shopping cart, checkout process, and payment gateway integration. Ensured that the website was secure and met PCI compliance standards.
- Conducted unit testing and debugging to assure that the website was functional, fast, and bug-free. Used performance optimization techniques, such as minification and caching, to improve website speed and reduce load times.
- Maintained the website's codebase, ensuring that it was up-to-date with the latest security patches and software updates. Implemented version control using **Git** to manage code changes and collaborate with other developers.
- Worked with third-party providers, such as shipping carriers and payment gateways, to integrate their services into the website.
- Continuously monitored website analytics, such as traffic, conversions, and bounce rates, to identify areas for improvement. Used analytics data to make data-driven decisions about website design and functionality.

Quality Assurance

March'14 - May'15

SOFTORINO (Valley Village, CA)

- Developed and executed test plans for Softorino's mobile apps on the App Store, including WALTR and iRingg. Ensured that the apps were functional, user-friendly, and met Apple's strict App Store guidelines.
- Conducted manual testing and automated testing using tools such as **Appium and Selenium**. Collaborated with developers to reproduce and isolate bugs, and documented them in a bug-tracking system such as **Jira**.
- Worked with cross-functional teams of developers, designers, and product managers to guarantee that the apps met user requirements and business goals. Communicated effectively with stakeholders to provide status updates, raise concerns, and suggest improvements.
- Developed and maintained test automation scripts using **Appium and Selenium**. Used Continuous Integration (CI) tools such as **Jenkins and CircleCI** to automate testing and ensure that the apps were always in a stable state.
- Developed and maintained test environments, including configuring emulators and physical devices, and ensured that they were up-to-date with the latest iOS and macOS versions.

- Conducted accessibility testing to secure that the apps were usable by people with disabilities. Ensured that the apps were compatible with assistive technologies such as **VoiceOver and Switch Control**.
- Performed load testing and stress testing to verify that the apps were scalable and could handle high user loads. Used tools such as **Apache JMeter and Gatling** to simulate realistic user scenarios.
- Worked with the customer support team to address user feedback and issues. Ensured that bugs were fixed and new features were added in a timely manner.

Business Analyst

Oct'13 - March'14

First Ukrainian International Bank (Kyiv, Ukraine)

- Worked with business stakeholders to identify and define business requirements for various projects and initiatives, such as digital banking services, loan origination systems, and risk management systems.
- Conducted analysis of business processes and workflows, and identified opportunities for optimization and automation. Used tools such as process flow diagrams, use cases, and user stories to document business requirements.
- Collaborated with the development team to confirm that the technical solution met the business requirements. Participated in Agile Scrum meetings, such as daily stand-ups and sprint retrospectives, to assure that the project was progressing according to plan.
- Conducted market research and competitive analysis to identify trends and best practices in the banking industry. Made recommendations for new products and services based on customer needs and industry trends.
- Worked with the testing team to ensure that the solution was tested thoroughly and met quality standards. Participated in User Acceptance Testing (UAT) to guarantee that the solution met the business requirements and was user-friendly.
- Conducted post-implementation analysis to secure that the solution met the business requirements and achieved the desired business outcomes. Made recommendations for further optimizations and improvements.
- Worked with the training team to develop training materials and conducted training sessions for end-users. Ensured that end-users were able to use the solution effectively and efficiently.
- Collaborated with the project management office to confirm that projects were delivered on-time, within scope, and within budget. Provided regular status updates and raised concerns as needed.
