
Ken Hill

Data Architect/Data Warehouse Architect/Business Intelligence/Project & Program Manager
(khill63@gmail.com or 614 209 1097)

SUMMARY

- Over 30 years of IT experience in business intelligence, data warehouse architecture, project and program management, systems design, and development
- **25+ years of relational database experience with emphasis on data architecture and modeling using ER/win, E/R Studio, and Power Designer, along with design, coding, performance tuning, and detailed business requirement analysis**
- **20+ years of experience in project and program management, including leadership of full-lifecycle data warehouse and business-intelligence implementations, supervising up to 25 team members, including developers, architects, business analysts, and quality assurance testers**
- **20+ years of experience with hands-on data architecture design, development, and implementation of business intelligence systems, including data warehouses, data marts, and operational data stores**
- **20+ years of experience with design, development, and implementation of data models specifically for major BI tools (QlikView, MicroStrategy, Business Objects, Cognos) utilizing standard modeling techniques like star-schema, snowflake, and hybrid structures in a variety of database environments (Snowflake, MySQL, Oracle, Oracle Exadata, UDB, MVS DB2, Netezza, SQL Server 2005/2008)**
- **4+ years of experience with Data Vault methodology, including the Certified Data Vault 2.0 Practitioner certification**
- 13+ years of systems experience in the financial services industry, including experience with corporate securities, credit reporting, and risk management
- 3+ years of P&C insurance industry with Guidewire data experience (Claims Center, Policy Center)
- 4+ years of state-level government (Ohio) experience with Medicaid and TANF eligibility
- 3+ years of QlikView and Qlik Sense implementation, development, and administration experience

CERTIFICATIONS

- “Government Information Factory (Data) Architect” from Inmon & Associates
- “Certified Data Vault 2.0 Practitioner” (CDVP2) from Dan Linstedt and Associates

EDUCATION

Franklin University, Columbus, OH
Bachelor of Science in Accounting

EXPERIENCE

BMC Software / Comtec

3/2025 – Present

Lead Data Warehouse Business Systems Analyst

Short-term contract working for a leading software developer. Responsible for analysis and design related to refactoring the existing data warehouse into the Data Vault methodology.

- Analysis of Oracle Financials data sources around General Ledger, and other financial subject areas.
- Planning of regression and system tests for new business entities during business reorganization.
- Testing using both existing and creating new MicroStrategy reports.

The technologies used included Snowflake, Oracle Financials, and MicroStrategy.

IT2 Solutions / Deloitte

9/2023 – 2/2025

Lead Data Architect - Data Integration

Responsible for data management for a large, multi-partner data integration project for the United States government. The project involved integrating data from multiple sources into a single, off-the-shelf software system for international supply chain and logistics management. Also led a team of 4 data and ETL consultants.

- **Responsible for all data integration analysis, including documentation and initial data mappings from multiple source systems across various data sources.**
- Interviewed business experts from the internal Deloitte team and government partners to determine data requirements.
- Developed and validated data-related documentation, including data models, mapping documents, and process flow mappings.
- Developed a playbook and set of specifications to unify supply chain activities across all partners
- Developed and led presentations to communicate data requirements and mapping documents to third-party vendors tasked with providing data. These sessions included business and technical resources from the partners.
- Over 100 potential data integration specifications were analyzed for possible inclusion. More than 60 data integration specifications were approved for further analysis and mapping.
- Instructed the vendor on configuring the COTS to meet the unique requirements of the client
- 4 direct reports, guiding 5 vendor consultants, and a matrixed relationship to requirements, testing, and training teams.

Technologies used included Snowflake, One Network, Lucid, MariaDB, and the Microsoft Office stack.

KEH Consulting Services LLC
Senior Consultant / Owner

7/2018 – Present

I own and operate a Business and IT Consulting firm specializing in IT Consulting and the board game industry.

- **Applied the methodologies and processes learned from my many years of IT experience to a new industry**
- Worked on the entire product lifecycle, including product development, identification and hiring of artists and graphic designers, production management, quality assurance, marketing, and communication
- Developed more than 45 products during the period
- Hired 2 additional employees who worked in IT Consulting in various capacities. Provided engagement support and billing services for those employees
- Provided volunteer IT Consulting to a local non-profit for website and database management while serving on the Executive Board, and acted as Treasurer for the same organization since 2012.

Technologies used included MySQL/MariaDB, QlikView 12, Adobe InDesign, and Adobe Photoshop.

NetJets, Inc.
Senior Enterprise Data Architect

5/2016 – 7/2018

Fulfilled a critical role as the lead Data Architect at this \$5B worldwide leader in private aviation, offering fractional aircraft ownership to individuals and corporations, focusing on ensuring compliance with standards and best practices governing data modeling and data warehousing.

- Partnered with stakeholders in the Business Intelligence and Analytics groups, as well as software developers and architects, to build database structures suited to the needs of the business; recognized for standardizing the data modeling architecture for ER/Studio, a data architecture and database design software application.
- Applied new database change management standards across the enterprise to ensure database modifications follow established standards.
- Championed the adoption of Data Vault, a system for managing data and Business Intelligence, and achieved the Certified Data Vault 2.0 Practitioner professional credential.
- Championed the adoption of a cloud-based Data Warehouse platform (Snowflake) to reduce costs and dependency on DBAs and provide tremendous performance improvements.

Technologies used included Snowflake, E/R Studio V16.0, Oracle Exadata, and Microsoft SQL Server 2012.

State Auto Insurance
Senior Enterprise Data Architect

11/2012 – 5/2016

Lead Architect for Data Warehouse and Business Intelligence for a mid-sized P&C insurance company:

Data Warehouse Architecture:

- Led effort to select a data warehouse appliance platform, including evaluation, proof of concept, and recommendation between competing platforms (Netezza and Teradata)
- Implemented a Data Vault-based data warehouse model in a mixed platform environment (SQL Server 2008 and Netezza 7) using Informatica V9 for GuideWire Claims Center
- Designed data warehouse model for GuideWire Policy Center (implementation in progress)

Business Intelligence Architecture:

- Identified an opportunity for the enterprise to utilize a new reporting and dashboard tool
- Secured approval for the new tool from C-Level executives within both IT and business
- Led the implementation of QlikView for dashboards and data visualization across the enterprise
- Worked with business groups to fully leverage the power of QlikView to provide knowledge workers with direct access to the data that they need to empower them to make critical business decisions
- Developed a strategy for the use of both Qlik Sense and QlikView tools within the organization, including the development of usage and development standards and training for users and developers

Technologies used included E/R Studio V11.0, SQL Server 2005/2008, Netezza, QlikView, and QlikSense.

BMW Financial Services
Senior Enterprise Data Architect

1/2010 – 10/2012

Data Architect for a large, international captive auto finance provider:

- Worked closely with business users, business analysts, application architects, and DBAs as part of large cross-functional teams
- Helped to develop a new enterprise data warehouse and business intelligence strategy and design for the replacement of the current platform
- Provided architectural and technology leadership to guide database development and design across the organization

Technologies used included E/R Studio V8.5, SQL Server 2005/2008, and Business Objects XI R3.

Project – National City Corporation
Business Intelligence Data Architect / Development Manager

Phase 1 – BI Tool Selection and Implementation

- Led team that implemented a new BI reporting platform for the Credit Risk Management group
- Designed & developed a dimensional reporting data mart with multiple subject areas constructed from the centralized data warehouse and other data sources

Phase 2 – BI Implementation for Regulatory Risk

- Managed the reporting implementation for a regulatory risk group, including key metrics such as past due and non-performing loans, sub-standard assets, industry concentration, and reconciliation reporting
- Led the development of the data architecture, which became a crucial component in the corporate regulatory data strategy and was leveraged by several projects from outside the initial user group
- Led the data acquisition team that played a crucial role in providing much of the data requirements during the approval and implementation of the acquisition by PNC Bank during the 2008 financial crisis

Phase 3 – Ongoing BI Program Implementation and Support

- Identified the key roles and responsibilities in the organization structure to facilitate the transition from the client-facing role as a widely-recognized system “expert” to internal staff members
- Worked closely with client management to develop and build the internal team needed to continue the implementation during the last 2 years of the engagement
- Managed ongoing support, monthly maintenance releases, and planning for new development projects with a mixed team of internal staff and consultants

Technologies used included Power Designer 11, UDB V8, Informatica V7, and Business Objects XI R2.

Atos – Origin USA
Program Manager / Senior BI Consultant

2/2004 – 6/2005

Project – Lexmark, Inc
Program Manager

- Implemented operational, tactical, and strategic reporting for a worldwide Siebel (CRM) implementation
- Managed a budget of \$2+ million, 6 concurrent BI projects, and up to 25 consultants
- Started the program with an initial budget of \$900K, and by fostering partnerships with the business organizations, the program grew by an additional \$1.2 million
- Executed 10 separate development projects that were completed on time and under budget
- Coordinated and provided overall technical and architectural guidance – which included data modeling, ETL, reporting, and data mart construction
- Responsible to executives for many areas of the business, including sales & marketing, call center, asset management, service delivery, and service engineering
- Met with VPs and Directors weekly to provide status, discuss issues, resource planning and development, as well as technical leadership

Gavroshe USA
Senior Consultant

4/2000 – 2/2004

- Responsible for assisting Gavroshe USA clients in designing, building, and maintaining Data Warehouses, Data Marts, and other Business Intelligence infrastructures in a variety of industries, including state government, manufacturing service, petroleum, natural gas, and pharmaceutical

Project – State of Ohio, Dept. of Job and Family Services
Senior Data Architect

- Acted as the lead data architect/modeler on several large dimensional data mart projects
- Utilized a relational data warehouse built following the Inmon “Information Factory” design
- Led design sessions with key business experts and defined detailed business requirements
- Created the logical and physical data models using ER/win for use by MicroStrategy 7.0/7i and Cognos running on MVS DB2 V6 & V7
- Worked closely with ETL developers, report developers, and DBAs to ensure optimal system performance within the relational database environment
- Acted as the main point of contact for business experts within the agency to develop strategies for effective data analysis and reconciliation with legacy source systems

Early Career (1989 – 2000)

Senior Project Manager, UUNet
Lead Programmer Analyst, Banc One Service Corporation
Senior Systems Analyst, Huntington Mortgage Company
Systems Analyst, Ashland Chemical Company
