

Summary: Experienced Data Engineer proficient in Python, SQL, PySpark, AWS, and Azure, with domain expertise in E-commerce.

EXPERIENCE

- Data Engineer (Contract)** Jul 2025 — Present
Viome Seattle, WA
 - Engineered **ETL pipelines with Python and Apache Airflow** to ingest daily sales and customer data from **Shopify's GraphQL API**, staging structured **JSON in AWS S3**, loading into **Redshift** for analytics.
 - Built views in **Redshift** using **advanced SQL** and version-controlled them via **GitHub** to power core BI reports (Upsell Dashboard, Subscription ASP, Daily Sales Report), used daily by **15+ stakeholders** to monitor kit and subscription revenue trends.
 - Designed ETL pipelines to **extract marketing spend and revenue** generated through various source/medium from Google Analytics (GA4), Northbeam, and Impact **via APIs**, and later created a Tableau dashboard showing all ad spend, revenue, and ROAS, helping the business **optimize ad spend and measure campaign effectiveness**, resulting in a **30% improvement in ROAS**.
- Data Analyst (Contract)** Feb 2025 — Jun 2025
Samsung Electronics Dallas, TX
 - Analyzed **sales data from Flip Fold models** (N-1 to N-3) stored in AWS S3, leveraged **Spark** for large-scale data transformation and querying, reducing processing latency by 40% and storing results in **Parquet** format to optimize future analytics.
 - Prepared sales performance and inventory reports for **Samsung Mobile Phone Business** using SQL queries and Tableau dashboards, enhancing decision-making by providing insights into KPIs, market trends, and financial metrics.
- Data Analyst (Part-Time)** May 2023 — Dec 2024
Arizona State University Tempe, AZ
 - Created **Tableau dashboards** to analyze enrollment trends across **100+ programs**, optimizing resource allocation and enhancing the university's ability to allocate resources effectively.
- Data Engineer** Dec 2020 — Dec 2022
Tyson Foods Bangalore, IN
 - Developed and automated **20+ ETL pipelines** using Python and Airflow, leveraging **Pandas for data transformation** and loading structured data into a data warehouse (BigQuery) for scalable analytics.
 - Engineered modular **dbt model** architecture (sources, staging, marts) in BigQuery, resulting in a 30% improvement in query performance through **partitioning, clustering, and materialized views**.
 - Restructured reporting architecture by developing an **OLAP cube in AtScale**, reducing sales team report generation time by 3 hours.
- Data Engineer** Oct 2019 — Dec 2020
Inventive Technology Ahmedabad, IN
 - Accelerated development time for new ETL pipelines by 30% by **creating parameterized pipelines in Azure Data Factory** with expressions, enabling reusable ETL processes.
 - Leveraged **Azure Databricks** (DataFrames, Spark SQL, caching, and optimized partitioning) for complex data transformation and analytics, accelerating data processing times by over **2x** through efficient distributed processing.
 - Utilized **PolyBase** to load data from multiple sources into **Azure Synapse Analytics**, enabling efficient storage, querying, and analysis of **1 TB-scale data**, which provided a unified source of truth to support business intelligence efforts.

PROJECT

- Olympic Data Analytics** | Link to GitHub
- Built parameterized data pipelines using Azure Data Factory to extract and load raw csv files into Azure Data Lake Storage Gen2.
 - Performed data transformations using Azure Databricks with PySpark and leveraged Synapse Analytics to analyze the data.

SKILLS

Programming Languages :	Python, SQL, PySpark, NoSQL, Shell Script
Big Data Technologies :	Apache Spark, Databricks, Airflow, DBT, Snowflake, Kafka
Databases and Tools :	PostgreSQL, SQL Server, MongoDB, Tableau, GitHub, Excel, Jira
Cloud Technologies:	Azure (DataFactory, Synapse, Fabric), AWS (Redshift, S3, Lambda), GCP (BigQuery)

EDUCATION

- Master of Science, Information Technology** Jan 2023 — Dec 2024
Arizona State University GPA: 4.00/4.00
- Bachelor of Science, Computer Science** Jul 2016 — Jun 2020
Gujarat Technological University GPA: 3.72/4.00
