Mobile: 202-730-5284

Professional Summary

- Senior Solutions Architect with 20+ years' experience with Information Security, Cloud, DevOps, Automation, Microservices, APIs, AWS, Azure, Java, Python, SQL, Database, Migration, PLM, Network, Security, Systems, Authentication & Authorization, Big Data, CICD, Discovery & Research, Datacenter, VMware, and ETL.
- Collaborate with business and technical teams and leadership to align and map the business vision and strategy to value streams, business capabilities, and functions. Designing the 3Rs: Reliability, Scalability, and Maintainability.
- Lead enterprise initiatives and guide as needed. Provides architectural support for application development, enhancements, and migrations. Using current standards, create and maintain documentation and architecture designs.
- Experienced in developing and modernizing applications on private/public cloud tech, using AWS, Docker, Kubernetes, and PaaS platforms.
- In-depth knowledge of application architecture design principles and Active Directory Implementation.
- Experienced with cloud automation frameworks and tools, with Migration experience moving on-premises applications to cloud environments using AWS.
- Architecting solutions for cloud platforms: GCP, Azure, AWS, and fit-for-purpose service models such as IaaS, PaaS, and SaaS.
- Strong knowledge of Teamcenter product architecture and technical capabilities in Part Management, BOM Management, Change Management, Classification, and Workflow.
- 10+ years of IT experience in Java, J2EE, RESTful API development, Microservices, Spring Boot, Java J2EE application, and web development on AWS Cloud with Spring Boot, Docker, and Microservices development.
- Support applications with various Enterprise Information Systems EIS, such as Kafka and DB.
- Experience in J2EE system architecture analysis and design patterns. Rich Experience in application, integration, and data architecture per business requirements.
- Experienced as an Enterprise Architect for systems implemented in Salesforce and MuleSoft.
- Exposure to all stages of the Software Development Life Cycle (SDLC), including proposal, process engineering, design, development, testing, deployment, and support.
- Good understanding of Software Configuration Management (SCM) principles and best practices in Agile, Scrum, and Waterfall methodologies.
- Implemented critical system security using best-in-class cloud security solutions.

Skills

- Cloud Services: AWS (EC2, EMR, Lambda, S3, ELB, Auto Scaling, Elastic Beanstalk, Cloud Front, Cloud Formation, Elastic File System, RDS, DMS, VPC, Direct Connect, Route53, Cloud Watch, Cloud Trail, IAM, SNS, Redshift), OpenStack.
- DevOps Tools: Chef, Ansible, Puppet, Docker
- CI Tools: Jenkins, Hudson, Bamboo
- Database: Oracle 12c/ 11g, MySQL, MSSQL
- Programming Languages: C++, Java, J2EE, JavaScript, jQuery, XML, UML, CSS, C#, VB.NET.
- Build Tools and IDEs: ANT, Maven, Eclipse, NetBeans, IntelliJ.
- Scripting Languages: Shell Scripting, Python, Bash, Batch, Perl, PowerShell
- Repositories Management Tools: Nexus
- Bug Tracking and Ticketing Tools: Clear Quest, ServiceNow, JIRA, Remedy
- Monitoring Tools: Datadog, Cloud Watch, Splunk.
- Network Protocols: HTTP, SMTP, SNMP, ICMP, TCP/IP, FTP, DNS, DHCP, OSPF, NFS, and SIP
- Version Control Systems: GIT, SVN, GitHub
- Operating Systems: Windows, Linux (RHEL 6.9, 7.0, 7.2), Ubuntu.
- Servers: Tomcat, Nginx, HTTP, JBoss, WebLogic, WebSphere, VMWare.

Education

- Lamar University, College of Business. Beaumont, TX - Master of Business Administration (MBA), Information Systems Management and ERP - 2016 (Complete)
- Vinayaka Missions University. Salem, India Bachelor of Science, Mathematics - 2005

Activities and Achievements

- AWS Certified Solution Architect - Associate
- CCNA
- Diploma in IT from NIIT
- SAP Certified Associate
- ITIL foundation certified.
- Received Awards and Recognition from clients for good performance.
- I received an in-state tuition fee scholarship from Lamar University for my MBA program.
- I attended the Global Enrichment program at Lamar University and made business visits to various Panama and Costa Rica companies.

Experience

Pan-American Life Insurance Group

July 2021 -

Present

Senior Solutions Architect

Location: Dallas, TX (Hybrid)

- Led solution design and architecture to build architectural specifications and artifacts using draw.io and MS Visio.
- Own solution design/architecture on business initiatives for large enterprise segments, as well as technical writing and documentation.

- Led full-stack development efforts for customer portals and internal tooling, following MVC and micro-frontend patterns.
- I worked on API design, architecture, and a serverless model for larger systems and platforms.
- Led the solution API solution best practices, standards, and guidelines at the enterprise level and API mindset.
- Collaborated with InfoSec, Integration team, development, and business teams for the API integration.
- Led the modernization of legacy front-end code into React component-based architecture, improving reusability and maintainability across insurance product lines.
- Designed and implemented Role-Based Access Control (RBAC) and Attribute-Based Access Control (ABAC) models in enterprise applications to enforce fine-grained permissions based on user roles, attributes, and contextual policies.
- Designed, deployed, and maintained cloud security controls across multi-account AWS environments using services such as AWS Security Hub, GuardDuty, AWS Config, WAF, Shield Advanced, Inspector, and IAM policy enforcement, aligning with CIS benchmarks and NIST 800-53 frameworks.
- Applied encryption at rest/in transit using Oracle Transparent Data Encryption (TDE), AWS KMS, and SSL/TLS configurations in hybrid cloud environments.
- Integrated access policies with PingID, Azure AD, and custom IAM solutions, ensuring compliance with corporate and regulatory standards (e.g., SOX, HIPAA).
- Built and automated AWS CloudFormation templates and CloudFormation StackSets to implement security baselines and infrastructure configurations across all AWS accounts via centralized governance controls.
- Integrated React with Spring Boot APIs, enabling secure, real-time updates using Axios, JWT authentication, and Redux for centralized state management.
- Collaborated with InfoSec teams to implement DLP (Data Loss Prevention) measures and audit logging using AWS CloudTrail and custom event streams.
- Built secure and responsive front-end applications with React and JavaScript, integrating with backend APIs and OAuth-secured endpoints.
- Automated serverless deployments using AWS SAM and CloudFormation, integrating with GitHub Actions for CI/CD pipelines across development, test, and production environments.
- Responsible for building and communicating architecture by creating design artifacts, diagrams, and documentation.
- Creating DevSecOps pipelines for deployments for Dev, Stage, and production environments using Jenkins, Terraform, Git, Bitbucket, Nexus repos, Nexus IQ code scan, Veracode, and Sonar.
- Designed a scalable, secure, and resilient cloud infrastructure that ensures best practices in cloud architecture.
- Developed reusable Terraform modules to automate provisioning of AWS resources, including VPCs, security groups, IAM roles, EC2, Lambda, and S3, enhancing DevSecOps velocity and compliance through versioned IaC.
- Collaborated with UX/UI designers to develop accessible, WCAG-compliant interfaces using React, HTML5, and CSS3, aligned with insurance regulatory standards.
- Architected enterprise applications using Java (Spring Boot), C# (.NET Core), and Python, enabling RESTful and event-driven microservices.
- Defined data protection strategies for sensitive customer and operational data, applying field-level encryption, data masking, and tokenization controls across application tiers.

- Experienced in overseeing and providing guidance in troubleshooting and solving complex problems related to system software and hardware incidents and problem calls, as well as recommending technological solutions.
- Implemented solutions designed according to enterprise architecture and security principles, adhering to enterprise principles - TOGAF, design guidelines, standards, and methodologies.
- Automated infrastructure provisioning using Terraform modules and Helm for repeatable EKS cluster deployments.
- Reviewed architectural metrics and implemented changes to increase stability and resiliency.
- Worked on leading, developing, and designing data projects, data Modelling, Informatica integration, Collibra, Metadata, Data Warehousing, and Data Governance.
- Experience working with web application development frameworks and libraries like Flask, FastAPI, and Django.
- Experienced as an Enterprise Architect for systems implemented in Salesforce, delivering low-code solutions to minimize customized code while delivering functionality in line with Functional and Non-Functional requirements.
- Experience working on data architecture, modeling, and design tools such as ER/Studio by Idera.
- Experienced in managing, maintaining, and overseeing the support of Salesforce Orgs and their environments. Implemented and improved security policies and practices.
- Provide recommendations for network standards and implement Zero-Trust solutions using third-party tools (Zscaler, Skyhigh, Cisco, and CrowdStrike).
- Designed and developed B2B API using Python, AWS Developer Portal, AWS Cognito, RDS, AWS API Gateway, AWS Lambda, and PING Identity.
- Enforced tagging, encryption, and IAM policies via AWS Config rules and conformance packs, reducing non-compliant resources across cloud accounts.
- Architected token-based authorization for APIs using OAuth 2.0, OpenID Connect, and JWT, aligning with zero-trust security models across distributed systems.
- Used Visual Studio Code with extensions for Terraform, Go, and CloudFormation linting to streamline development, testing, and collaboration with distributed teams.
- Documented APIs using OpenAPI/Swagger, and integrated testing frameworks for contract testing and performance benchmarking.
- Experienced in integrating data, applications, services, and technologies into a Salesforce solution, including MuleSoft and integrating non-SF applications (integration of REST APIs), data migration, and dataset initiation.
- Supported development of custom tooling and Lambda functions using Go (Golang) to perform policy enforcement, security event processing, and automation of incident response workflows.
- Managed vendor relationships and worked as an advisor in selecting tools, vendors, and contracting.
- Built solid relationships and collaborated with clients to manage stakeholder relationships internally and externally.

Environment: AWS EC2, VPC, RDS, S3, EKS, ECS, IAM, ISTIO, .NET, GitLab, Bash shell scripting, YAML, Git, Maven, Ansible, Tomcat, Terraform, AWS CFT, JIRA, CI/CD, DynamoDB, MSSQL, Sybase, Oracle, .NET, C#, Python, Scala, Glue, RDS, Networking, AWS Cognito, AWS CloudFront. Groovy, Pind ID, Java, Spring Boot, Microservices, Containers (Docker), Python, Kubernetes K8, Angular/ React, Kafka, Big data, Gen AI, SNS/ SQS, API Gateway, IAM.

Experience

Freddie Mac

Mar 2020 –

July 2021

Cloud Architect

Location: Los Angeles, CA (Remote)

- Experienced designing, planning, and delivering large-scale cloud migration projects in enterprise environments.
- Process analysis and design, identifying technology-driven improvements to core enterprise processes.
- Designed and developed Kubernetes architecture using Docker, Service Mesh, Istio, HELM Charts, and Spinnaker.
- Implemented Gitlab self-managed infrastructure for DevOps and created pipelines for Terraform deployments and applications using Python, NodeJS, JAVA SpringBoot, AngularJS.
- Integrated AWS Security Hub findings and Amazon Inspector results with centralized SIEM and ticketing tools, improving vulnerability detection and response times.
- Leveraged TypeScript with React to improve type safety, catch bugs early, and document component props and data contracts
- Integrated React applications with CI/CD pipelines for automated testing, linting, and deployment via GitHub Actions and AWS Amplify.
- Applied API versioning, schema validation, and rate limiting using Apigee, AWS API Gateway, and Kong.
- Experienced working with Code Quality tools like SonarQube, CodeNarc, and Fortify.
- Experience working with container orchestration systems like Kubernetes for building applications with Docker and seamlessly testing and deploying them.
- Participated in sprint grooming and Agile development ceremonies to align React feature delivery with business priorities and cross-team integration goals.
- Design and implement Continuous Integration and Continuous Delivery Life Cycle using Git, Jenkins, Maven, Gradle, SonarQube, JFrog Artifactory, and internal Docker registry.
- Software development experience with expertise in client-side technologies (Angular/React, JavaScript/TypeScript, HTML, CSS) and using Java, Spring Framework/Spring Boot, and web application technologies.
- I worked on Data Science, Machine learning, Managing teams and projects, and knowledge of new technologies, Java, Lucene, Elastic, Hadoop, Spark, JavaScript, PostgreSQL, AWS, and Git.
- Worked on designing and implementing complex ServiceNow solutions, including custom applications and integrations.
- Experienced working with Databases such as MSSQL, MYSQL, SYBASE, Oracle, and PostgreSQL.
- Worked on monitoring tools like Elasticsearch, Logstash, Kibana (ELK), Splunk, Prometheus, and Grafana.
- Designed and implemented ReactJS components for internal loan servicing and compliance dashboards, integrated with Node.js and Java microservices.
- Designed and implemented new systems to enhance performance, reliability, and scalability.
- Extensive, real-world experience designing technology components for web development using Angular, NodeJS, and Python.
- Experience securing applications through authorization and authentication using Okta and Active Directory

Implementation.

- I have worked on Discovery and Analysis, Assessment, target cloud readiness design, migration, migration execution, management services, and CI/CD pipeline planning and execution.
- Responsible for deploying and overseeing the company's cloud computing strategy. This includes cloud adoption plans, application design, management, and monitoring.

Environment: AWS EC2, VPC, RDS, S3, EKS, ECS, IAM, ISTIO, Java, Microservices, Jenkins, Python, Bash shell scripting, Groovy, Git, Bitbucket, Gradle, Maven, Docker, Ansible, Nexus repository, Tomcat, JBoss, Spinnaker, JIRA, CI/CD, DynamoDB, MSSQL, Sybase, Oracle.

Aioi Insurance Services USA/Toyota Insurance

Apr 2019 - Mar 2020

Enterprise Solutions Architect

Location: Los Angeles, CA (On-Site)

- Experienced and understanding of a large-scale applications portfolio in the enterprise-wide environment, including migrating on-premises workloads to the cloud.
- Designing, deploying, and maintaining AWS infrastructure using Terraform and CloudFormation templates.
- Experienced in architecting and performing as a technical lead on enterprise-scale applications.
- Migrate data science applications from traditional hosting to cloud-based environments (AWS).
- Design and develop ETL Processes in AWS Glue to migrate data from external sources like S3, ORC/Parquet/Text Files into AWS Redshift.
- Developed responsive and performant web applications using React.js, optimizing component rendering and user interactions for high-traffic insurance and financial platforms.
- Experienced working on AWS Redshift database - performance tuning, clustering, and data allocation.
- Experienced in Big Data/Spark architecture against massive volumes of datasets and expertise in ETL performance improvement tasks.
- Experienced working with Data warehousing and tools like Informatica BDM, Snowflake, and Tableau.
- Experienced in AWS technologies such as EC2, Cloud formation, EMR Cluster, AWS S3, Glue, Athena, and AWS Analytics.
- Strong Understanding of AWS, Cloud, Data Lake, and Data Modelling.
- Designed and developed ETL/SQL/Python-based processes to perform complex data transformation processes.
- Experienced working on microservices and API development using (Spring Boot, API, Microservices, Docker, and Kubernetes).
- Built reusable functional components and custom hooks, promoting maintainable, modular codebases and improving development velocity across teams.
- Used React Router to implement dynamic routing and multi-page navigation, enhancing UX in self-service portals and internal dashboards.
- Experienced with Azure Machine Learning, Azure Cognitive Services, and AWS technologies such as SageMaker, Redshift, EC2, Data Pipeline, Kinesis, EMR, and AI services, and transcribe. I also worked on Google technologies (GCP), such as the Vertex AI platform and Agent Builder.
- I worked on containerized deployments through Docker containers and orchestrated them through Kubernetes.

- Experience in deploying the J2EE and .Net applications, Environment setup, Middleware configuration, Application Server administration, Application infrastructure management, analyzing and troubleshooting issues, and providing technical support to development/test/operations/production support teams.
- Developed MapReduce/Spark Python modules for machine learning & predictive analytics in Hadoop on AWS/Azure.
- Experience working with Access Management technologies, best practices, and IdP (Okta)
- Designed and developed the UI for the website with HTML, XHTML, CSS, JavaScript, and AJAX; used AJAX & JSON communication for accessing Restful web services data payload.
- Experienced with Vanilla JS (ES6) and modern JavaScript frameworks and libraries (examples - Vue, React, Polymer, Angular, Handlebars, and jQuery).
- Experienced with AWS services, including but not limited to S3, EC2, Lambda, IAM, EBS, RDS, EMR, CloudWatch, and CloudTrail.
- Led an active integration effort to build out PaaS with Red Hat OpenShift and Docker and worked with developers on application containerization.
- I configured the Elastic Load Balancer (ELB) for High Availability, using multiple AZ (Availability Zones) and multi-region.
- Performed Various system administration tasks for Linux and Windows servers. Wrote shell/bat scripts to fulfill business requirements.
- Participated in companywide and other department projects and initiatives as a GRC representative to provide GRC guidance and interpret rules, regulations, risks, and best practices.
- Strong working knowledge of OAuth2, LDAP, SAML, OIDC, RADIUS, and authentication protocol implementations.
- Experienced working on DevOps Automation tools like Ansible, Terraform, Puppet, and VMware VRA.
- Experienced working on Relational Database systems (MySQL, Amazon RDS, PostgreSQL, Aurora).
- Experienced working on NoSQL systems, DynamoDB, and HBase.

Environment: Docker, Kubernetes, Selenium, AWS, Azure, Splunk, JIRA, Python, Bash and YAML scripting, Linux, Web Services (RESTFUL), Java 1.8, .Net, IntelliJ IDEA, jQuery, Spring 4.0, JIRA, EC2, S3, VPC, Redshift, SQS, SNS, IAM, EMR, Glue, Athena, Cloud watch, RDS, Lambda, MS SQL, MySQL.

Centers for Medicare and Medicaid Services
2019

Jun 2018 - Apr

Solutions Architect (Cloud/Java/DevOps)

Location: Reston, VA (On-Site)

- Solving and designing for the Data Centre migration of applications from the Data Centre to AWS Cloud using a lift and shift strategy.
- Analyzed the existing application to design the target cloud platform architecture.
- Experienced in designing, documenting, and verifying technology solutions that meet business needs and technical requirements and follow enterprise-defined guardrails, governance, and security standards for cloud deployments.

- I worked on setting up the AWS cloud security policy and am well-versed with Ranger, Kerberos, and other security tools.
- Designed AWS CloudFormation templates to create custom-sized VPCs, subnets, and NATs to deploy Web applications and database templates. Designed roles and groups for users and resources using AWS Identity Access Management (IAM).
- Experienced in designing and deploying cloud-native enterprise applications in a public or private cloud.
- Configured Jenkins with Windows, Linux, and Solaris slaves to automate the build for various languages like Java, Tibco, and .NET using build tools like Maven, ANT, and shell scripts.
- Writing Terraform modules for automating the Creation of VPC-VPN from the data center to the Prod environment and Cross-account VPC Peering.
- Setting up auto-scaling on the instances to design cost-effective, fault-tolerant, and highly available systems.
- Worked on app designs into front-end code with React, Node, Typescript, HTML5, CSS, and JavaScript.
- Used Docker and Kubernetes to manage microservices for continuous integration and delivery development.
- Experienced in transforming monolithic applications into microservices.
- Implemented CI/CD (Continuous Integration /Continuous Delivery) framework using Jenkins, Maven, and Artifactory in a Linux environment, and Integration of Maven/Nexus, Jenkins, Git, Confluence, and Jira.
- Used Ansible to manage web applications, Environment configuration files, users, mount points, and packages.
- Experienced working on NoSQL systems like MongoDB and MarkLogic.
- Used Kubernetes to deploy, scale, load balance, and manage Docker containers with multiple name-spaced versions.
- Responsible for resilience and disaster recovery, including backup and restore operations.
- Configured and administered Jenkins for managing weekly Build, Test, and Deploy chain, SVN/GIT with Dev/QA/Prod Branching Model for weekly releases.
- Integrate with IDCS, design and implement Oracle Cloud Infrastructure network using Internet gateway, DRG, Fastconnect, VPN, and LBaaS. (DW, Siebel, Java Applications).
- Implemented Systematic provisioning of user access accounting for joiner, Mover, and Leaver actions using SailPoint and Okta.
- Strong web application development with Java-based server environments like Apache Tomcat and IBM WebSphere.
- Worked on ticketing tools like ServiceNow and Remedy.
- Hands-on experience in JWT, session handling, code signing, certificate authentication, TLS/SSL, API Security, Application registration, and application integration scenarios.
- Support Experience with automation testing tools like Selenium for Java Applications. I worked on various activities and the deployment of all the modules as part of the Integration Team.
- Good experience with DevOps, building and releasing tools like Chef, Puppet, Ansible, PowerShell, AWS, Vagrant, ANT, Maven, Jenkins, Bamboo, Docker, RunDeck, Terraform, GitHub, Subversion, SonarQube, Hadoop, and HP Fortify SCA.
- I worked on migrating Oracle schemas from the data center to AWS RDS Oracle.
- Strong working knowledge of OAuth2, LDAP, SAML, OIDC, RADIUS, and authentication protocol implementations.
- Experienced working on API design using REST, SOAP, SMTP, and SFTP.

Environment: Java 1.8, Eclipse 3.2, IntelliJ IDEA, jQuery, Spring 4.0, Web Services (RESTFUL), Oracle11g, DB2, SQL, MVC, Kafka, JSON, JAXB, Unix, Linux, Windows, Log4j, Junit, Apache Tomcat, Gradle, GitHub, JIRA, .Net, Redshift, IAM, EMR, Mongo DB, Azure, Docker, Kubernetes.

World Bank Group

Nov 2016 -

Jun 2018

Cloud Architect

Location: Washington, DC (On-Site)

- Experienced in designing, planning, and delivering large-scale data center migration projects in enterprise environments.
- Maintained deep knowledge of the market for cloud services, enterprise applications, business process management, advanced analytics, and integration software.
- Strong web application development with Java-based server environments such as Apache Tomcat.
- Architect highly scalable cloud-based applications based on microservices, ensuring security is an integral component.
- Responsible for using AWS Console and AWS CLI to deploy and operate AWS services.
- Built S3 buckets, managed policies for S3 buckets, and used S3 buckets and Glacier for storage and backup on AWS.
- Provisioned the highly available EC2 instances using Terraform and CloudFormation CFT.
- Experienced working with Amazon Web Services environment and good knowledge of AWS services like EC2, CloudWatch, Elastic Load Balancers, and Route 53.
- Created and implemented GRC Archer policies, procedures, training, and communication of the new policies and procedures to support projects.
- Experienced in providing security solutions for Java-based Microservices, React-based frontends, and Android/iOS-based mobile applications on AWS and Azure.
- Deployment to AWS with Chef, Ansible, and Terraform towards AWS or Google Compute cloud, using Terraform for building, updating, and versioning infrastructure safely and efficiently, and creating custom in-house solutions with Chef configurations.
- Experience with maintaining an ASP.NET application written in .NET 3.5. Knowledge of Visual Studio 2010 and a few .NET frameworks.
- Experienced with ITIL - ticketing using Remedy and ServiceNow.
- Experience working with IAM tools like SSO, Okta, OAuth, Azure AD, Okta provisioning, and Active Directory.
- Able to lead onshore and offshore Cloud/DevOps engineers to ensure project and task completion and adherence to the organization's standards.
- Experienced working on DevOps Automation tools like Ansible, Terraform, Puppet, and VMware VRA.
- Configuring the Docker containers and creating Docker files for different environments.
- Implemented a Continuous Delivery pipeline with Docker, GitHub, and AWS

- Worked on deployment in an OpenShift controller based on a user-defined template called a deployment configuration.
- Experienced in developing, deploying, and monitoring large distributed and parallel systems using container technology, including Docker and Kubernetes.
- Designed and implemented a VMware-based infrastructure that supports .NET web applications and MS SQL Server clusters.
- Developed and maintained/improved the Applications Architecture framework.
- Use OpenShift to improve application security by putting admin consoles on different Docker containers that are accessible only from unusual port numbers.
- Hands-on work experience with implementations of Google Cloud Platform (GCP)
- Experienced in developing, deploying, and monitoring large distributed and parallel systems using container technology, including Docker, Kubernetes, AWS EKS, and Fargate.
- Well-versed in chef concepts, like roles, environments, knives, and server admin/organizations.
- I worked on a GitHub implementation containing various remote repositories for multiple applications.
- Provide highly durable and available data using S3 data store, CI/CD, versioning, and lifecycle policies, and create AMLs for mission-critical production servers for backup.
- Worked on Chef to manage configuration on the connected server and developed the CloudFormation script to automate the EC2 instances with JSON templates.
- Worked on setting alerts on instances using CloudWatch and using auto-launch configurations for better performance
- Implemented and designed AWS virtual servers using Ansible roles to ensure deployment.
- Used MySQL, DynamoDB, and ElastiCache to perform basic database administration.

Environment: Shell Scripting, Puppet, Chef, Bit Bucket, Jira, Python, Tomcat, RabbitMQ, Oracle, Mango DB, Jenkins, Ruby, Jira, Maven, Git, Ubuntu, Centos, AWS, Elastic Load Balancer, S3, Cloud Watch, IAM, RDS, ELB, NLB, Docker, Kubernetes, Spring MVC, Spring Boot, Microservices, Splunk, SolarWinds.

Accenture

Jul 2011 - Aug

2014

SRE Engineer

Location: Bangalore, India (On-Site)

- I handled operations and maintenance support for AWS cloud resources, which included launching, maintaining, and troubleshooting EC2 instances and Virtual Private Clouds (VPCs).
- Designing cloud infrastructure, planning and testing better solutions, deploying and managing physical or cloud infrastructure, and performing efficiently under pressure in critical situations with Windows, Linux, and other environments.
- Created detailed AWS Security Groups that behaved as virtual firewalls that controlled the traffic and allowed one or more AWS EC2 instances to be reached.

- Worked on service delivery, change management, and problem management using ticketing tools such as Remedy and ServiceNow SNOM.
- Configuring Virtual Private Cloud (VPC) with subnets containing servers.
- Setting Cloud Watch alerts for instances and utilizing Auto-scaling launch configurations for better performance.
- NTP server and client configurations are used to synchronize the timing of the entire server with the NTP server.
- Implemented and troubleshooted network services like NFS, FTP, SAMBA, SMTP, NTP, Telnet, and SSH.
- Maintained a NIS environment for both QA and production. Configure NIS clients and troubleshoot NIS-related problems.
- Securing the Linux Server and Network Services using TCP/IP Wrapper and Net filter (iptables).
- Implemented and maintained the monitoring and alerting of production, corporate servers, and storage using AWS CloudWatch for efficiency.

Environment: SDLC phases, J2EE, JDK 1.7, Apache ANT, JSP, HTML, JavaScript, JMS, SVN, GIT, Rabbit MQ, Angular JS, PL/SQL, AWS, Route 53, Cloud Front, Cloud Watch, Cloud Trail, Jenkins, TCP/IP.

Genpact

Oct 2008 - Jul 2011

Senior Java Developer

Location: Bangalore, India (On-Site)

Environment: Core Java/ J2EE, Apache Tomcat, IBM WebSphere, Servlets, Struts, EJB, JDBC, JMS, Eclipse IDE, Oracle, SQL, HTML, CSS.

Hinduja TMT

Dec 2005 -

Apr 2008

Software Engineer

Location: Bangalore, India (On-Site)

Environment: Core Java, J2EE, SDLC, JDBC, Servlets, Struts, JSP, HTML, XML, PL/SQL, Eclipse.
