Microsoft Exchange Engineer/M365 Operations

PROFILE

Dedicated IT Professional with a proven track record in translating business requirements into effective system architectures, deploying secure infrastructure solutions and ensuring optimal system performance. Seeking a challenging role to leverage my expertise.

Hands-on experience with Microsoft Exchange Online, Exchange Server 2010/2013/2016/2019/Office 365, Windows client XP/7/8/10, Windows Server 2003/2008/2012, 2016 Outlook Client 2007/2010/2013, 2016 Active Directory/Azure, DirSync/Azure AD Connect and Mobile device technologies.
Implementation and support of Active Directory.
Configuration of Archrivals and Encryptions,
Configuration of Security Suite, Co-existence setup
Familiar with Quest Notes Migrator for Exchange
Exchange Cloud Operations with Office 365 and other services like SharePoint, OneDrive for business and Planner.
Experience with Identity Manager 2016, Azure AD Connect and ADFS.
Skilled in on premise solutions with Exchange 2010, 2013, 2016, and Windows Server 2008R2, 2012 R2, and Windows server 2016.
Skilled in cloud solutions with Microsoft Azure and Office 365.
Exchange and Office 365 coexistence and migration.
Working knowledge of networking protocols and components including TCP/IP, DNS, SIP, MAPI, SMTP, SAML.

Willingness and capability of quickly learning new technologies.
Ability to multi-task and meet deadlines with enthusiasm.
Ability to work efficiently and productively without direction or guidance.
Capable of exercising extreme discretion and independent judgment.
Exhibits a strong technical aptitude and excellent communication skills with the ability to work effectively in a diverse, highly talented team across a multitude of technical and non-technical groups.
Experience with Active Directory, Microsoft Identity software (ILM, FIM, MIM), Azure AD Connect and ADFS as well as Microsoft Federation.
Management of domain name system (DNS), and other core Network Services.
Use of PowerShell scripting in migrations, automation, performance and system administration in Exchange and Windows server.
Capable of create technical documentation.

TECHNICAL SKILLS

- | | |
|---|---|
| Intune | Veeam Software |
| SQL Development , SQL Server | AD Federation Services |
| SharePoint, Microsoft Exchange | Exchange Admin Center |
| Active Directory | Exchange Management Console |
| PowerShell | Database Availability Groups |
| Windows Server | Azure AD Connect (DirSync) |
| Azure | On premised, Online, Hybrid, Coexistence, |
| Office 365 | Collocation, Cutover Migration, Updates |
| Multi-factor Authentication | Linux, Unix, |
| Blackberry, BES and MDM | Security+ |
| MS Office, Tableau | Six Sigma, QA, SAS |

EXPERIENCE

IT Specialist (SYSADMIN)

Bureau of Reclamation, Grand Coulee WA OCT 2024 – PRESENT

- Maintain high availability and reliability of Industrial Control Systems by diagnosing complex technical issues, applying sound judgment, and coordinating with Operations teams for timely resolution.
- Securely configured and deployed infrastructure system solutions, including managing and installing operating systems, virtualization, and related technologies.
- Plan, implement, and manage hardware and software installations, life cycle upgrades, and system configurations, ensuring accurate documentation and version control across IT-integrated ICS environments
- Lead system recovery efforts, troubleshooting and restoring failed ICS environments to maintain operational continuity and minimize downtime.
- Partner with internal customers to assess operational priorities and integrate system administration strategies that align with business needs and security protocols.

Sr. IT Systems Engineer – Active Directory

Worthington Industries, Columbus, OH APR 2023 – DEC 2023

- Translated business requirements into documented, effective, efficient, and secure system architecture and designs.
- Securely configured and deployed infrastructure system solutions, including managing and installing operating systems, virtualization, and related technologies.
- Installed and configured hardware and software, both physical and virtual. Developed scripts and managed system capacity plans
- Provided expert production support, specializing in root cause analysis to resolve issues efficiently
- Ensured systems performed optimally to meet or exceed business requirements.
- Maintained comprehensive system documentation, including design documents, run books, and ticketing system entries.
- Provided accurate estimates for tasks and work hours, consistently delivering high-quality work on time.
- Reported work progress in a timely manner. Automated tasks and processes for improved efficiency.
- Mobile Device Management, Multifactor Authentication,

M365 Operations / Engineer

Truist Bank, Birmingham, AL JAN 2020 – JAN 2023

- Support Infrastructure and Operations by managing Mail flow with Microsoft Exchange, M365, and Skype for Business. Support migration activity, troubleshoot mail flow issues, and handle support requests via Service Now ticketing systems. Responsible for Group Policy, Active Directory, Microsoft Azure, Systems Center Operations Manager, VMWare and other systems. Collaborate with local team members and other product team members across the globe to test, deploy, and support production applications and services. Participate in security configurations, resilience, and performance tuning of production apps.
- Manage Services in Skype for Business and Microsoft Teams
- Utilize Cisco IronPort for message tracking, SPAM, and quarantine Services, and centralized reporting
- Meet with team members to review trouble tickets, issues, and set goals and priorities.
- Manage O365/M365 operations and accounts
- E-discovery, Multi-Factor Authentication, IronPort to track, administer and trace messages
- Create and manage Azure Cloud resources including devices, accounts, and policies
- Utilize, issue, and administer Network Attached Storage for backups, recovery, and account usage

M365 Operations / Engineer

COMCAST, WEST CHESTER, PA MAY 2019 – DEC 2019

- Comcast corporate acquisitions required the addition of acquired companies into Comcast controlled services which included all messaging and collaboration platforms: Microsoft Exchange Email, Microsoft Teams, Skype-for-Business, and SharePoint.
- I am in a primary collaboration and coordination role with a number of business lines (Security, Technology, Audit, Compliance, Legal) to ensure the highest level of execution and quality for our regulatory, audit, compliance, and customer deliverables and processes to support these engagements with an ever-changing and

evolving set of requirements, participants, and standards.

- Prioritized, requested, and saw to completion information requests for scheduled reviews and quarterly, monthly, or periodic requests made by regulators, auditors, customers, management and compliance activities.
- Provide special project in the areas of support imaging, deployment, breakdown & relocation of computer equipment.
- Administrated Microsoft Azure Cloud environments
- Broke down complex and multi-faceted requests to engage the right resources and then bring several sets of inputs together to develop a single, aligned, and supportive response.
- E-discovery, Multi-Factor Authentication
- Defined simple project plans and responses to support recommendation owners where assistance is required, oversee progress reports on these plans and milestones, and be an advocate to encourage self-sustainability from these owners in the future.
- Managed Virtual environments including configuration, backup, and replication using VMware and Veeam
- Escalated and bring attention any matter of importance or risk to the organization, team, or the current effort that involves any significant regulatory or legal challenge.
- Performed other duties as assigned related to Microsoft Messaging Environment, Microsoft Exchange, Skype-for-Business, and SharePoint.

MICROSOFT EXCHANGE Engineer / M365 Operations

CORNING INC., CORNING, NY OCTOBER 2018 – MAY 2019

- The main focus of this project was to provide operations support for the on-prem Microsoft Exchange 2010 environment. I also supported a migration to Microsoft 365.
- Migration from IBM Lotus Notes to Microsoft 365.
- Daily Production Meetings with Corning/Wipro Management regarding company-wide use case and solutions.
- System Upgrades included Rollup 23 System Update.
- Used PowerShell to provide Exchange system reports on various components including: Mailbox Status, Server Status, Deleted Accounts, Health Checks.
- Exchange database maintenance along with mailbox migration / moves, and dismount/mount of Exchange databases.
- White space reclaiming including moving all mailboxes out of the Exchange 2010 database.
- Dismounted and worked with various server teams to remove and reformat server disks.
- Managed Virtual environments including configuration, backup, and replication using VMware and Veeam
- Troubleshoot and resolved issues with servers, Exchange 2019, Office 365 and provided support to end users using ServiceNow, and maintained service response and resolution within SLA target metrics.
- Administrated Microsoft Azure Cloud environments
- Mobile Device Management, Multifactor Authentication, e-discovery
- Collaborated with cross-functional teams to troubleshoot or email-enable their appliances.
- Worked with back-end teams on SAP.
- Developed and maintained technical documentation on project, processes, and Microsoft best practices.
- Participated in planning the building move and managed administration of Outlook scheduling and calendars.
- Lead Team in Planning and Strategy Meetings, and reconfigured Outlook resources to move recurring meetings from one building/calendar to another.
- L3 escalation support working with Microsoft to resolve these issues.
- Lead periodic updates and upgrades including feature evaluation, implementation, communication and post production end user support for systems.
- Coordinated and worked on System Change activities: Server Upgrades (Windows Server, Microsoft Exchange Server)
- Open/document/track problem tickets escalating to appropriate workgroups when required
- Managed server certificate import and validation and Performed maintenance and performance tuning.
- Managed Exchange circular logging to maintain and monitor server storage space.
- Provided support for Lync 2010 pool and prepared for migration to Skype-for-Business.
- Assisted Network Operations Team (NOC) in support of Cisco Networker and EMC backup appliance in running backups and data loss prevention plan of network and messaging system.
- Provide ongoing user support and resolution for system, application and/or data issues. Troubleshoot and correct processing errors.
- Translated technical requirements for non-technical users.

- Researched and presented what is possible with the current system.
- Met regularly with users across multiple time zones.
- Supported users who speak a different language.
- Provided two-week period of hyper-support.
- Environment: Microsoft Exchange 2010, Microsoft Office 2016, Cisco Networker, EMC – Backup Appliance, Service Now Ticketing System, Symantec VIP – VPN soft token system, Lync 2010

MICROSOFT UNIFIED COMMUNICATIONS ADMINISTRATOR / M365 Operations

CARESTREAM DENTAL, ATLANTA, GA JUNE 2018 – OCTOBER 2018

- Corporate restructuring resulted in separation of Carestream Dental from Carestream Health. They needed to provide a separate technical systems for everything. I was in charge of managing change, assets and ensuring smooth transition with superior user experience.
- Migration from IBM Lotus Notes to Microsoft Office 365.
- Participated in and supported the migration of all services including email, messaging and VOIP. Major contributions included support, training, user documentation and help documentation, installations, and asset management.
- Responsible for customer support and end-user training.
- Ensured that their installation of Skype-for-Business was working well.
- Troubleshoot connections, installations, configurations.
- Responsible for developing and conducting international training sessions for Germany, France, England, Korea, and USA.
- Provide special project support imaging, deployment, breakdown & relocation of computer equipment
- Created documentation, end-user guides, training materials, admin guides, and user guides, and step-by-step support procedures for use by tech support team in handling customer support calls.
- Executive level support – responsible for supporting the CEO and her executive team.
- Process surplus equipment according to established procedures, proper sanitization of electronic equipment up to and including disk wiping to DoD standards.
- Responsible for Asset Management: managed, distributed, & installed UC assets for the company (Phones- AudioCodes 450HD, 440HD, 430HD, 420HD, Polycom 8800, 8500; Headsets – Jabra 40 Stereo/Mono (+400 sets for the company)
- Mobile Device Management, Multifactor Authentication, e-discovery
- Provided remote support and software updates.
- Participated in HyperCare support calls working across time zones (late at night and early in the morning, plus weekend support).
- Team size approx. 11 team members, some remote.
- Cross-functional collaboration and work in multi-cultural environments: Network Team, Desktop Support Team, Network Apps Architect
- Testing: performed system/equipment tests prior to rolling out to general users
- Made recommendations for needed equipment (Phone hardware)
- Environment: Skype-For-Business, Office 365, Microsoft Office

Microsoft Exchange Engineer / M365 Operations

US ECOLOGY, LIVONIA, MI AUGUST 2017 – JUNE 2018

(Work Schedule: Monday – Friday / 9am – 5pm)

- Project involved expanding the existing Microsoft Exchange system with the addition of Windows server and Microsoft Exchange 2016. Upgraded and performance tuned the existing Exchange 2013 system and created a coexistence with Exchange 2016 and Outlook OWA. Additionally, provided support, documentation, and technical training to keep their infrastructure running smoothly.
- Microsoft Systems Engineer/Exchange Engineer responsible for performance, quality, policies, best practices, implementation of Microsoft network and Exchange email and messaging system.
- Mobile Device Management, Multifactor Authentication, e-discovery
- Patched Exchange servers with updates and service packs following ITIL practices for change management
- Troubleshoot Exchange performance issues with mail blockage, spam, Outlook (OWA) access, and slow performance, providing both on site and remote diagnosis and resolution
- Configured and deployed Windows 2008 and 2012 servers in both production and testing environments on Microsoft Hyper V virtualization platform.
- Implemented Exchange 2016 in virtual environment on new servers and established DAG within Exchange 2016

environment for high availability.

- Support and maintain software infrastructure using VMware and Veeam for replication, backups, High availability, and scalability of services.
- Handled requests on Exchange email server related to mail quotas, delegation, rights management and individual mail restores.
- Identify and recommend as appropriate, software related products and services to improve existing processes.
- Administered Microsoft Azure Cloud environments in conjunction with other cloud software tools
- Utilized Microsoft planning tools such as best practice analyzer, Microsoft Exchange sizing calculator, and PowerShell scripting.
- Managed Microsoft Exchange coexistence with Exchange 2013 and Exchange 2016; created legacy namespace, and assisted users with connectivity issues.
- Trained end-users on changes to functionality, services, and Outlook features available.
- User management, creating and modifying accounts, file systems, network rights and access to file systems and directories.
- Provided knowledge transfer documentation to prevent knowledge drain and ensure reliable, ongoing operations
- Provided L3 support, administration, and technical team supervision for the entire IT network infrastructure
- Environment: Microsoft Exchange 2013, Exchange 2016, Outlook OWA, PowerShell, Active Directory, Exchange Management Console, Network Routers and Switches (Gigabit, Netgear Prosafe, Gemini IT Tracker for support desk, Citrix AppCenter Management Console 6.5, EQAI (proprietary)), GoTo Assist – Remote admin software, Citrix Receiver, Veeam, VMware, Skype for Business 2015, Citrix HDX Monitor, VMware vSphere Client

LEAD SYSTEMS ANALYST/EXCHANGE ENGINEER

GEORGIA POWER COMPANY, ATLANTA, GA APRIL 2016 – AUGUST 2017

- Migrated the existing Exchange 2010 server deployment to Office 365, and created a POC for Exchange 2016 on premises.
- Performed cutover migrations to move customers to Office 365 Coordinated with network security team to open required ports/URLs through Firewalls.
- Coordinated with Cisco Unified Messaging team/Security team / Symantec DLP team to deliver customer requirement.
- Provided validation of HCW.
- Re-configured AAD Connect/DirSync and configured ADFS to meet Exchange Online requirements.
- Enabled Lync feature for Office 365 migrated mailboxes.
- Responsible for all planning and documentation including project plan and migration plan.
- Responsible for technical documentation and reporting including but not limited to project status reports, project closure report, project specific documentation, handover and training documents.
- Enabled Lync feature for Office 365 migrated mailboxes.
- Analyzed existing configurations for on premise Exchange, ADFS, MDM & Office 365 before designing a migration strategy.
- Performed validation of tenant configurations and required domains to Office 365.
- Configured hybrid for Public folder accessibility between Exchange on premise and Office 365.
- Utilizing PowerShell (PS) created automated tasks to provide reports and automatically update user attributes.
- Worked with Active Directory (domain, User accounts, groups), and created users through Active Directory.
- Reset and configure user's profile through Active Directory,
- Implemented and maintained an Active Directory Environment supporting end users within a Production Environment.
- Developed PowerShell scripts for creating batches to prepare for migration, for automating administration, and for improving efficiencies in workflow.
- Responsible for systems maintenance, administration of user accounts, and training of new tech staff.
- Managed the messaging systems division, staff and equipment, in charge of quality, support and day -to-day operations; system and business unit performance.
- Implemented Exchange 2016 environment of one server to test and provide a POC for customer. Created and tested user mailboxes, and test migration.

SENIOR SYSTEMS ANALYST /EXCHANGE ENGINEER

COX COMMUNICATIONS, ATLANTA, GA MAY 2014 – MARCH 2016

- Migrated the existing Exchange 2010 on premises to Exchange 2013 on premises.

- Verified contents of migrated folders to ensure consistency post migration.
- Troubleshoot issues with mailbox moves, monitored bandwidth and migration progress, and reported on status and any changes in planning that were necessary.
- Tested and configured servers for upcoming migrations.
- Managed post implementation phase, pre-pilot, and pilot migration.
- Responsible for all design and architecture, both high and low level, as well as infrastructure build-out.
- Developed financial, performance, dashboards and forecasting models using Microsoft Excel, Tableau, and SAS. Organized, published, and disseminated data analysis and reports using SharePoint, and facilitated meetings with stakeholders to make recommendations and gain consensus. Optimized workflows and processes using Lean and Six Sigma techniques.
- Setup and configuration of Exchange 2010 servers, tied to DAG with LUN storage.
- Maintained clustering configuration for Exchange 2013 server high availability through the clustering manager to monitor and maintain services and configuration.
- Performance tuned and optimized Exchange 2013 Server for maximum performance and operation.
- Patched servers with updates and service packs following ITIL practices for change management.
- Troubleshoot issues with mail blockage, spam, OWA access, and slow performance, providing both on site and remote diagnosis and resolution.
- Handled requests related to mail quotas, delegation, rights management and individual mail restores.
- Troubleshoot load balancing issues causing client connectivity and latency issues.
- SCCM Installed, and Setup. Made standards for SCCM in the Site.
- Setup of Send and Receive Connectors, monitor NDRs and Queue build-up, mailbox moves, fail-over of DB's to passive node, failback, Message Tracking and troubleshooting.
- Configured Microsoft Exchange 2013 servers in a failover setup over several databases, in a high availability setup.
- Managed Hyper-V and VMware servers for clients; resolved connectivity and performance issues associated with virtualization.
- Defined and prioritized, allocated resources, tracked and provided status reporting of work assignments, projects and programs for agile reporting.
- Managing user accounts within Active Directory, modifying permissions for access to pertinent network.
- Designed and developed Master pages, user controls, web pages, and implemented client side and server validation, as well as report design.
- Implemented and maintained SharePoint project site.
- Used PowerShell to create workflows in SharePoint.

SENIOR SYSTEMS ADMINISTRATOR/MICROSOFT NETWORK AND EXCHANGE

HABIF, AROGETI & WYNNE LLC., ATLANTA, GA OCTOBER 2013 – APRIL 2014

- Lead the implementation of Exchange 2013 hybrid deployment for Exchange Online services. The hybrid configuration initiative for Exchange was successfully implemented with single sign-on for users. I was also responsible for the support and management of the Lync 2010 and 2013 environments in coexistence.
- Responsible for planning phases of deployment, readying on premises servers, and configuring hybrid machines utilizing VMware and Veeam
- Deployed ADFS and ADFS proxy servers on premise to facilitate single sign-on functionality for ease of user experience internal and externally.
- Windows Server 2008R2, 2012 installation, deployments, troubleshooting and automation.
- Setup and configuration of Exchange 2013 servers, tied to DAG with LUN storage.
- Maintained clustering configuration for Exchange 2013 server high availability through the clustering manager to monitor and maintain services and configuration.
- Performance tuned and optimized Exchange 2013 server for maximum performance and operation, and patched servers with updates and service packs following ITIL practices for change management.
- Troubleshooting, configuring and managing IIS servers
- Troubleshoot issues with mail blockage, spam, OWA access, and slow performance, providing both on site and remote diagnosis and resolution.
- Handled requests related to mail quotas, delegation, rights management and individual mail restores.
- Troubleshoot load balancing issues causing client connectivity and latency issues.
- Installed Exchange 2013 from a lotus notes environment, 3000 users at one location.
- SCCM Installed, and Setup. Made standards for SCCM in the Site and International sites.
- Worked with tech support on making images and pushes of updates.

- Setup of Send and Receive Connectors, monitor NDRs and Queue build-up, mailbox moves, fail-over of DB's to passive node, fallback, Message Tracking and troubleshooting.
- Nested 1,500+ distribution and security groups within members using PowerShell.
- Provided Maintenance and Scripting to support Messaging Environments.
- Created batches using scripting knowledge via PowerShell for eventual mailbox database moves to Exchange Online.
- Utilized PowerShell (PS) to automate tasks, provide reports, automatically update user attributes, perform checks for Exchange Logs, Event Logs, and for general Exchange administration.
- Researched technologies to enable continued innovation within the infrastructure.
- SharePoint updating/monitoring. Improved daily backup operations efficiency 10% by implementing a universal calendar.
- Created master pages for SharePoint site.

MICROSOFT EXCHANGE MESSAGING SYSTEMS ADMINISTRATOR

UNITED PARCEL SERVICES (UPS), ATLANTA, GA MAR 2013– SEPT 2013

- Windows server and Exchange server administration.
- Managed special projects: shipping, audit preparation, equipment transport, secure disposal.
- Administered Windows Active Directory, Windows server and Exchange updates, migrations, and maintenance.
- Responsible for PC security, Network security and connectivity, troubleshooting.
- Administration, maintenance and troubleshooting of Microsoft Exchange, Windows server, and Microsoft Office.
- Planned, developed and implemented technical solutions from complex user issues and requirements.
- Messaging technical administrator responsible for the continued support of Microsoft Exchange 2007/2010 and Lync 2010 unified communications environments in a high availability deployment.
- Document control, including: build docs, server diagrams, architecture, user issues and change requests.
- Created hybrid scenario by registering domain, federating namespace, and subscribing for corporate licenses.
- Troubleshot failed mailbox migrations, monitored migration statistics, reported to management on progression, and made adjustments to plans as deemed necessary.
- Created workflow processes and automation infrastructure.
- Mobile Device Management experience with iPhone, Android, and Blackberry devices.
- Performed daily monitoring of Exchange software through native tools and SCOM.
- Managed Exchange coexistence with 2007 and 2010 versions, created legacy namespace, and assisted users with connectivity issues.
- Supported HUB, CAS and mailbox server roles for Exchange 2010, 2007.
- Responsible for creating new user and shared mailboxes, distribution groups, and security groups.
- Managed Exchange servers, firewalls, and VPN.
- Utilized the Exchange Hybrid Configuration Wizard to assist with the deployment and configuration of coexistence.
- Specialized in troubleshooting, configuring, maintenance, installations, imaging and deployment of Microsoft Exchange.
- Monitored and Managed Microsoft Exchange Server 2010/2007.
- Exchange Management Console, Exchange Management Shell.

MICROSOFT EXCHANGE SYSTEMS ANALYST/ADMINISTRATOR

SOUTHERN STATES LLC, HAMPTON, GA JAN 2012 – JULY 2012

- Implemented group policies and various strategies to improve existing systems.
- Patched servers with updates and service packs following ITIL practices for change management.
- Updated configurations to filter incoming mail, spam and resolve bounce back issues.
- Managed user, room, and group mailboxes in Microsoft Exchange 2010 to include mail flow troubleshooting and malicious email investigation and clean up
- Provided support and managed access for company intranet/extranet in SharePoint 2010 environment
- Responsible for user management, creating and modifying accounts, file systems, network rights and access to file systems and directories.
- Set-up archival environment with offsite DR and constant connectivity.
- Handled purchasing, licensing of software.
- Created and administrated group policies.
- Administrated Blackberry Server, Good for Enterprise, McAfee Spam Servers.

- Administration using EMC, EMS (Exchange Shell) and Windows Shell (Power Shell). Supporting Outlook client.
- Supported the Mobile Device Management.
- Served as an administrator for Exchange 2010 for over 14,000 Employees over multiple offices.
- SCCM 2010 and 2007 setups and administration.
- Supported multiple domains; forest, and child domains.
- Administrated Windows Network, Exchange Network, and Linux Environment.
- Administrated SQL, Exchange 2010.
- Team Leader for Group Policy, Profile Management, and DNS administration
- Setup, configured, and maintained Microsoft Exchange 2010 servers in multiple database availability Groups (DAG).
- Troubleshoot issues with macros within Excel and Outlook for Office 2016 Pro Plus.
- Configured Windows 2008 virtual machines for the deployment of Lync 2010 and related services
- Provided email filtering solutions and troubleshoot mail flow issues.
- Resolved on going auto discover and calendaring issues for users.
- Compiled PowerShell script to automate termination process, and mailbox backups.
- Utilized Office Telemetry to extract application records and events.
- Ran reporting on users licensing, policy enforcement, and account statuses.
- Administered and maintained Microsoft Exchange Server 2010 and Outlook.

SYSTEMS ADMINISTRATOR/ANALYST: EXCHANGE MESSAGING AND NETWORK

UNITED ACCEPTANCE INC., SMYRNA, GA APR 2010 – DEC 2011

- Administer and maintain Microsoft Lync Server 2010.
- Maintain and patch Microsoft Windows Server 2008.
- Performed daily and weekly backup checks; resolved any issues pertaining to backups not completing properly.
- Created backups for Exchange and file servers within Backup Exec 2010
- Configured ActiveSync profiles for mobile device connectivity to Exchange 2010 and tested to ensure functionality.
- Configured mail flow for internal, remote, and external mail routing.
- Responsible for the day-to-day administration, operation, and support of enterprise messaging infrastructure including Microsoft Exchange 2010, SMTP Edge Systems, e-mail compliance systems and Blackberry Mobile Technologies.
- Implemented and configured CASArrays for load balanced connectivity to Exchange 2010 for RPC client access.
- Configured connectors, namespaces, disclaimers and set user policies and permission.
- Created security groups based on company policies.
- Configured, implemented and troubleshoot Outlook.
- Deployed and configured applications on workstations using SCCM.
- Configured ActiveSync profiles for mobile device connectivity to Exchange 2010 and tested with clients to ensure functionality.
- Configured Windows 2008 virtual machines for the deployment of Lync 2010 and related services.
- Assisted technical team with specifications for custom workstations as part of a business productivity solution.
- Ordered and maintained inventory. Performed virus removal and follow-up remedies.
- Documented solutions to recurring problems.
- Utilized ticketing system to keep track of issues and resolutions.
- Supported Microsoft Office, Exchange, Active Directory, system upgrades and migrations.
- Installed, configured, and supported local area network, internet system, PBX system, desktops, laptops, and other mobile devices including: Dell, HP, Lenovo, Blackberry, Apple, and Android products.
- Performed necessary maintenance to support network availability.
- Provided level 1 and level 2 technical support to 160+ employees.
- Maintained inventory levels, ordered supplies and replacement parts.
- Performed repairs, installed and configured parts.
- Train end-users on best practices and new software application packages.
- Administered users on Active Directory, MS Exchange, SharePoint, and UNIX/Linux platforms.
- Created documentation, training materials, and incident reports using SQL Server.
- Planned and scheduled installation of software packages, operating systems and hardware.
- Assisted with systems resources including performance, capacity, availability, serviceability, and recoverability.

NETWORK SYSTEMS SUPPORT ANALYST /EXCHANGE ADMINISTRATOR**ELECTIONS SYSTEMS AND SOFTWARE. OMAHA, NE JUN 2007 – MARCH 2010**

- Troubleshoot failed mailbox migrations, monitored migration statistics, reported to management on progression, and made adjustments to plans as deemed necessary.
- Maintained clustering configuration for Exchange 2007 server high availability through the clustering manager to monitor and maintain services and configuration.
- Troubleshoot issues with mail blockage, spam, OWA access, and slow performance, providing both on site and remote diagnosis and resolution.
- Handled requests related to mail quotas, delegation, rights management and individual mail restores.

COMPUTER OPERATIONS SPECIALIST/EXCHANGE ADMINISTRATOR**GEORGIA TECHNOLOGY AUTHORITY, ATLANTA, GA SEPTEMBER 2005 – MAY 2007****QUALITY ANALYST****BELLSOUTH TELECOMMUNICATIONS, ATLANTA, GA APRIL 2001 – AUGUST 2005****EDUCATION**

Masters of Network and Communications Management.

Information Security Concentration

DeVry University 2016

Bachelor of Applied Science in Information Technology

Clayton State University 2006

Associate of Science in Computer Science

Georgia Perimeter College 1998

Certifications

Lean Six Sigma Yellow Belt Certification

CompTIA A+ Certification
