PROFESSIONAL SUMMARY:

Highly skilled Senior Full Stack Engineer with 5 years of experience designing, developing, and deploying scalable web applications using modern technologies and frameworks. Proficient in JavaScript and TypeScript, with deep expertise in React.js, Next.js, Node.js, and Vue.js. Adept at architecting cloud-native solutions and microservices with AWS, Serverless, Kubernetes, and Docker, driving efficiency and scalability across high-traffic platforms.

Extensive experience building robust, RESTful and GraphQL APIs, implementing real-time features using WebSockets and Socket.io, and optimizing application performance through code-splitting, lazy loading, and SSR. Strong command of both relational and NoSQL databases like PostgreSQL, MySQL, MongoDB, and Redis, ensuring optimal data storage and retrieval.

Proven ability to lead cross-functional teams, manage large-scale projects, and drive Agile software development processes. A strategic problem-solver with a passion for innovation, continuously adopting cutting-edge technologies to deliver seamless, secure, and performant applications. Committed to writing clean, maintainable, and well-documented code while adhering to best practices such as TDD and CI/CD automation.

TECHNICAL SKILLS:

Programming Languages: JavaScript (ES6+), TypeScript, Python, Go, Rust, Ruby, PHP, C#, Java, HTML5, CSS3, Sass, Less

Front-End Frameworks/Libraries: React.js, Next.js, Vue.js, Nuxt.js, Svelte, SvelteKit, Angular, Redux, Zustand, Recoil, Vuex, Tailwind CSS, Chakra UI, Bootstrap, Material-UI, Ant Design, Three.js, WebGL, D3.js (for data visualization)

Back-End Technologies: Node.js, Express.js, NestJS, Koa, Fastify, Hapi, Go (Gin, Echo), Python (Flask, Django), Ruby on Rails, GraphQL (Apollo, Relay), RESTful APIs, gRPC, WebSockets, Serverless Architecture, Microservices Architecture, Event-Driven Architecture (Kafka, RabbitMQ)

Databases: Relational: PostgreSQL, MySQL, SQLite, MariaDB, NoSQL: MongoDB, Redis, DynamoDB, Cassandra, CouchDB

DevOps & CI/CD: AWS (S3, Lambda, EC2, RDS, CloudFront, ECS, EKS), Azure, Google Cloud Platform (GCP), Docker, Kubernetes, Terraform, Ansible, Pulumi, Jenkins, GitLab CI/CD, CircleCI, GitHub Actions, Travis CI

APIs & Integrations: REST, GraphQL, WebSockets, gRPC, OAuth2.0, Stripe, PayPal, Twilio, Google Maps API, 3rd Party API Integrations, Payment Gateway Integration

Performance & Optimization: Webpack, Parcel, Vite, Babel, ESLint, Prettier, Lazy Loading, Code Splitting, Server-Side Rendering (SSR), Static Site Generation (SSG) with Next.js or Nuxt.js, Performance Profiling, Web Vitals Monitoring

Agile Methodologies & Project Management: Scrum, Kanban, Agile Development, CI/CD Pipelines, Continuous Deployment

Cloud & Serverless: AWS Lambda, Azure Functions, Google Cloud Functions, Serverless Framework, Terraform, CloudFormation, FaaS (Functions-as-a-Service), BaaS (Backend-as-a-Service)

EDUCATION:

- **B.S in Computer Science from Texas Tech University (TTU), Lubbock, TX, USA - 05/2017 - 05/2019**

PROFESSIONAL EXPERIENCE:

Bhuman.ai, New York, NY (Remote)

Jun 2022 - May 2024

Senior Full Stack Engineer & KraftCPAs (Healthcare Clients)

Responsibilities:

- Developed and maintained scalable, full-stack web applications using React.js, Next.js, and Node.js, ensuring fast load times and optimal performance with techniques like code splitting, lazy loading, and SSR (Server-Side Rendering).
- Led the transition to TypeScript, improving code maintainability and type safety across both front-end and back-end layers.
- Designed and implemented highly available microservices architecture using NestJS, Express.js, and GraphQL for high-traffic web platforms.
- Migrated legacy applications to a serverless architecture on AWS Lambda, significantly reducing hosting costs and improving scalability.
- Worked with AWS CloudFormation and Terraform to automate the deployment of infrastructure, leveraging services like S3, EC2, RDS, and CloudFront.
- Enhanced user authentication by integrating OAuth2.0, JWT, and SAML for SSO (Single Sign-On) across multiple client platforms.
- Implemented CI/CD pipelines using GitLab CI, Docker, and Jenkins, accelerating development cycles and ensuring smooth automated deployments.
- Optimized performance by refactoring critical components, reducing TTFB (Time to First Byte) by 40% and improving overall application load times by 30%.
- Designed and implemented full-stack applications for managing healthcare financial data using React.js, Node.js, and Java with a focus on scalability, performance, and security.
- Architected and maintained microservices-based applications using Spring Boot and AWS Lambda, improving the platform's reliability and scalability in the cloud.
- Developed complex data integrations between healthcare providers and financial systems, leveraging RESTful APIs and GraphQL to ensure real-time data synchronization across platforms.
- Set up CI/CD pipelines using Jenkins and GitHub Actions, automating testing, build, and deployment processes to streamline the release of healthcare-related financial software.
- Spearheaded performance optimizations and implemented accessibility testing for healthcare applications, ensuring compliance with industry standards and improving user experience.
- Provided technical leadership to a team of 5 developers, conducting code reviews, technical mentoring, and ensuring alignment with healthcare-specific technical requirements.
- Collaborated with cross-functional teams, including product managers, architects, and QA, to define technical specifications and deliver solutions on time.
- **Key Projects & Achievements:**
- Successfully delivered a healthcare-focused financial management system that integrated with multiple healthcare providers and ensured real-time data flow while maintaining data integrity and security.
- Optimized legacy healthcare financial applications, reducing processing time by 30% through performance tuning and modernizing the codebase.
- Implemented healthcare data compliance features, such as data encryption and secure user authentication, ensuring HIPAA compliance and securing sensitive patient financial information.

Cisco Systems, Inc , San Jose, CA (Remote)

Nov 2020 - Apr 2022

Full Stack Developer

Responsibilities:

- Led a team of 6 developers in building high-performance, responsive web applications using React.js and Vue.js, powering the client-side of large-scale enterprise solutions.
- Designed back-end systems with Node.js and Express, integrating with MongoDB and Redis for caching and real-time data synchronization.
- Developed a content management platform with Strapi (Headless CMS) and integrated it with Next.js for static site generation, reducing content update times by 50%.
- Established comprehensive testing strategies using Jest, Mocha, and Cypress, maintaining 90% test coverage across the application.

- Implemented API gateways using AWS API Gateway and Lambda, integrating GraphQL for efficient data fetching and improved client-server communication.
- Utilized Webpack and Babel to configure build processes, ensuring seamless cross-browser compatibility and improving the developer experience.
- Created CI/CD pipelines with CircleCI and Docker, ensuring consistent and automated deployments to AWS and GCP environments.
- Developed dynamic, responsive UIs using React.js and Angular, working closely with designers to implement pixel-perfect, mobile-first applications.
- Integrated RESTful APIs and enhanced user experience by implementing real-time features using Socket.io and WebSockets.
- Refactored and optimized legacy JavaScript codebases, implementing ES6+ features to improve code readability and reduce technical debt.
- Collaborated with back-end teams to define API contracts, ensuring smooth integration and reducing development bottlenecks.
- Worked with build tools like Gulp and Webpack to automate development workflows, minimizing build times and increasing team productivity.

HP Inc, Palo Alto, CA (Remote)

Oct 2019 – Sep 2020

Frontend Engineer

Responsibilities:

- I was responsible for building modern, responsive frontends using React.js, Vue.js, and Angular for a range of clients across healthcare and retail industries.
- Assisted in the development of full-stack web applications using JavaScript, Node.js, and Express, contributing to both front-end and back-end features.
- Worked with Vue.js and Angular to create interactive, data-driven user interfaces.
- Implemented MySQL and MongoDB databases for various applications, handling complex queries and optimizing data storage.
- Participated in Agile sprints, contributing to code reviews, bug fixes, and feature development under the guidance of senior engineers.
- I designed reusable UI components, reducing development time by 30% for future projects.
- My focus was on creating clean, efficient code while collaborating closely with backend teams to ensure seamless integration with RESTful APIs.
- I worked alongside designers to implement mobile-first design principles, improving accessibility and increasing user engagement by 20%.
- I also introduced automated testing tools like Jest and Cypress, which helped reduce bugs and improved overall application stability.
- I participated in weekly Agile sprints, contributing to feature development, bug fixes, and deployment strategies.
- I led efforts to optimize frontend performance, implementing lazy loading and code-splitting techniques that reduced page load times by 40%.
- My work included setting up continuous integration with GitLab CI, ensuring consistent and error-free deployments.
