QA AUTOMATION ENGINEER

Detail-oriented QA Automation Engineer with experience in designing robust test strategies to validate the quality, reliability, and stability of software releases through manual and automated testing. Offering extensive experience in developing Java-based test automation frameworks and implementing automated testing solutions, I have successfully enhanced testing efficiency and reduced time-to-market for various projects. Adept at collaborating with cross-functional teams to execute automated test scripts and integrate testing processes seamlessly into the software development lifecycle. Seeking a challenging role where technical acumen and passion for automation can contribute to delivering high-quality software products.

AREAS OF EXPERTISE

Quality Assurance	Manual & Automated Testing	Project Management
Test Automation Frameworks	API & Backend Testing	Requirements Gathering & Analysis
Test Plans, Cases & Script Development	Web & Mobile Testing	Defect/Bug Tracking & Reporting
Test Planning & Strategy	Database Testing	Agile/Scrum Methodologies
Test Documentation	Performance & Usability Testing	Continuous Process Improvement
Programming & Scripting	CI/CD Integration	Team Collaboration & Leadership

SKILLS & CORE COMPETENCIES

- Full understanding of the software development life cycle (SDLC) and Java technologies.
- Proficient in utilizing Selenium WebDriver, Maven, and Cucumber/Gherkin for effective UI automation and BDD.
- Test automation experience using open-source technologies and/or in-house frameworks.
- Skilled in manual and automation testing of client/server, web-based, and Cloud (AWS) applications.
- Wide knowledge of testing authorization and authentication of REST APIs.
- Well-versed with the latest industry trends and best practices in test automation and quality assurance.
- Competent in designing comprehensive test cases based on requirements and user stories.
- Ability to write and execute SQL queries to perform database testing and validate data integrity.
- Ability to conduct code reviews for test automation scripts and provide constructive feedback to enhance code quality.
- Proficient in understanding business requirement specifications, functional specifications, design documentations, and converting them into test scenarios.
- Consultative approach to successfully interact with clients with a deep understanding of end-user needs, ensuring that the automated tests align with client expectations.
- Excellent project management skills with the ability to perform project oversight and execution of deliverables.
- Solid analytical and problem-solving skills to identify, troubleshoot, document, and track defects through the entire testing process, and present technical solutions that best meet client needs.
- Strong organizational and time management skills with the ability to efficiently manage multiple tasks simultaneously to meet deadlines in a fast-paced environment.
- Excellent interpersonal, written and verbal communication skills for effective collaboration with cross-functional teams, including development, product, management, quality assurance, and other stakeholders.

TOOLS & TECHNOLOGIES

Languages – Java

Frameworks – Cucumber, Gherkin, JUnit, TestNG

Test Approaches – Scrum/Agile Methodology, Behavioral Driven Development (BDD), Data-Driven Testing, Continuous Integration/Continuous Deployment (CI/CD)

Testing Tools – Selenium WebDriver, Cucumber, REST Assured Library, Postman, Appium, API Testing, JMeter

Test Build & Integration Tools – Maven, Jenkins

Databases – SQL, MySQL, Oracle, JDBC

Utilities – JSON, XML, Apache POI Libraries, AWS Cloud Server

Integrated Development Environments (IDEs) – IntelliJ IDEA, Eclipse IDE

Version Control – GIT, GitHub

Defect Tools & Test Management – Jira, Jira-Xray

Microsoft Office Suite – Word, Excel, PowerPoint, Outlook

PROFESSIONAL EXPERIENCE

Senior Software Development Engineer In Test | Insight Global

Feb 2023 – Present

- Developed and implemented robust Java-based test automation frameworks, resulting in a 50% reduction in manual testing efforts.
- Design and develop automated tests using a variety of languages (e.g. Java), tools (e.g. Selenium WebDriver, Appium), and implementing various test frameworks (e.g. Gherkin/BDD, TestNG, JUnit).
- Document test cases in a test management system, correlating them to both automation code and the tested requirements.
- Develop and deploy automated test scripts using Postman to validate software functionality, performance, and scalability.
- Formulate and execute comprehensive Java-based test plans for API and backend systems, leveraging Maven to ensure test coverage.
- Utilize tools like Postman and REST Assured to execute manual tests, scrutinizing backend databases using SQL for data integrity, security, and functionality.
- Collaborate closely with developers and product owners, to understand requirements, comprehend system architecture, devise effective testing strategies, and ensure the delivery of high-quality software.
- Detect and meticulously document software defects, ensuring swift resolution.
- Execute performance testing using a combination of Java, Selenium WebDriver, and Maven to evaluate backend system scalability and responsiveness.
- Establish and maintain an efficient API and backend automation testing framework.
- Implement Git for version control, seamlessly integrating testing into CI/CD pipelines.

Quality Assurance Engineer | Change Healthcare

Jan 2021 – Jan 2023

- Implemented Selenium WebDriver, JUnit, and Cucumber/Gherkin for comprehensive BDD testing, employing Java as the primary language to construct robust test automation frameworks.
- Collaborated in the design and review of test cases, test scenarios, and test plans.
- Engaged closely with developers to reproduce, debug, and resolve identified issues.
- Adhered to Agile development methodologies and actively participated in Agile ceremonies, including sprint planning, daily stand-ups, and retrospectives.
- Leveraged Jira and Jira-Xray for streamlined project management, efficient test case management, and defect tracking, with Java playing a central role in scripting and automation.
- Applied Git for effective collaboration and code management with adherence to coding standards.
- Optimized CI/CD workflows with Jenkins, significantly improving testing efficiency.
- Deployed the Rest Assured Library for API testing and JDBC for database interactions.
- Identified areas for process improvement and implemented efficient testing strategies.

Quality Assurance Engineer | McKinsey & Company

Jan 2019 – Dec 2020

- Utilized test management tool JIRA effectively for analyzing complex User Stories, tracking new innovative features/enhancements, and documenting defects efficiently and accurately.
- Followed Test Driven Development (TDD) as much as possible and written test cases using Java, TestNG for every relevant class.
- Connected to database to Query the database using SQL for data verification and validation.
- Earned a promotion from a manual testing position to an automation testing position within one year, showcasing the impact of Selenium WebDriver on improving testing efficiency and outcomes.
- Analyzed business requirements, documented business requirements specifications, wrote Test Plans, Test Cases.
