

Maksym Lesyk

Seattle, WA (willing to relocate) | (425) 470 9517 | maksym.lesyk.work@gmail.com | [linkedin.com/in/mlesyk](https://www.linkedin.com/in/mlesyk)

Fully Work Authorized | No Visa Sponsorship Required

Summary

Software Engineer with **9 years** of experience in software and test automation frameworks development. IBM certified specialist with Java, Python, SQL skills. Owned and developed 60% of a test framework for a large-scale Hadoop project, ensuring high-quality solutions and driving continuous improvement in test coverage and efficiency. Great at communication and teamwork

Skills

- **Development:** Java, Python, Bash, Spring Framework, MySQL, Tomcat, Git, Maven, HTML/CSS
- **Testing Tools & Frameworks:** JUnit/TestNG, RegEx, SoapUI, Rest Assured, Selenium WebDriver
- **Data Engineering:** Airflow, ETL, SQL/NoSQL databases, SQL performance analysis
- **Big Data:** Hadoop, YARN, MapReduce, Spark, Kafka, ZooKeeper
- **DevOps & Cloud:** Linux, Docker, Kubernetes, Jenkins, Ansible, Vagrant, Prometheus, Grafana
- **Web technologies and networks:** REST, SOAP, JSON, TCP/IP, HTTP(S), SNMP
- Strong understanding of OOP, TDD, BDD, RESTful API, CI/CD, Agile

Certifications

IBM Data Engineering Specialization — Coursera (link) Feb 2025

- Hands-on experience with SQL, Python, Apache Spark, Hadoop, Airflow, Kafka, and NoSQL databases
- Developed ETL pipelines, BI dashboards, and data engineering workflows

Experience

Software Engineer — CyberVision, Inc. Jun 2021 – Dec 2023

- Developed and optimized core Hadoop logic, including Resource Manager job scheduling for Fair Scheduler and Capacity Scheduler and enhancements to the Hadoop Distributed File System (HDFS)
- Enhanced Resource Manager performance for high-load clusters by implementing separate volume usage and volume sharding, reducing bottlenecks and improving system efficiency
- Integrated 70% of modifications into the major version release of commercial Hadoop distribution
- Designed and implemented microservices and a RESTful API using Java and Spring Boot

Software Developer in Test — CyberVision, Inc. Dec 2018 – Jun 2021

- Designed and developed 60% of an automated testing platform to verify scenarios with HDFS, MapReduce and YARN jobs for a distributed Hadoop cluster
- Automated environment setup and run using Bash, Ansible, Vagrant, Jenkins, Docker, Kubernetes
- Developed a Java and Spring Boot application to automate artifact release verification and simplify collaboration with cross-functional teams which improved release process efficiency by 15%
- Built and optimized test framework for REST endpoint validation using JAX-RS (Jersey) and Jackson, ensuring accurate verification of Hadoop jobs and service metrics

QA Automation Engineer — Promptlink Communications, Inc. Dec 2014 – Nov 2018

- Integrated robust data solutions using Java, JDBC, SQL, and Linux-based tools for processing, transforming, and reporting data, enabling clients to improve systems data accessibility by 20%
- Provided ongoing support for the existing test framework, utilizing Java, Maven, Rest Assured, Selenium Web Driver, JDBC, SQL
- Spearheaded integration of a comprehensive monitoring system covering 6 critical areas: Java JMX metrics, Linux system metrics, events and logs, MySQL slow queries, GC logs, and API request latency
- Reduced daily report generation time by 98% (5 hours to 5 minutes) through an in-depth investigation and optimization of SQL query performance

Education

Master's Degree (Equivalent) in Telecommunications Engineering Sep 2009 – Feb 2015

National Technical University of Ukraine "KPI", Institute of Telecommunication Systems
