Profile Summary

Senior Software Engineer with 10+ years of experience designing, developing, and maintaining scalable, high-performance software systems across healthcare, education, and finance domains. Proven expertise in backend and fullstack development, cloud infrastructure, database optimization, and enterprise integration.

Core Expertise:

- Backend development with Java, Spring Boot, PHP, Node.js, Python, and microservices
- Frontend experience using JavaScript, jQuery, AJAX, HTML, CSS
- Strong database skills: Oracle (PL/SQL), MySQL, PostgreSQL, SQL Server, MongoDB
- Cloud and DevOps: GCP, AWS, Docker, Kubernetes, Terraform, CI/CD pipelines
- API integration: REST, SOAP, Salesforce, DocuSign, QuickBase, and internal services
- PHP modernization: monolith to containerized GCP workloads
- System performance tuning, load testing, and optimization (Oracle, Apache, SQL, JVM)
- Delivered enterprise solutions including university campus systems, hospital systems, exam/course timetabling, e-commerce, and finance automation platforms
- Agile/Scrum leadership, mentoring junior developers, code reviews, and architecture guidance
- Security-aware development using OAuth2, TLS, PKI, and best practices in compliance

Technical Skills

- **Programming Languages:** Java, PHP, Python, TypeScript, JavaScript, Node.js
- **Frameworks:** Spring Boot, Laravel, Zend, Symphony, JUnit, Django, TensorFlow
- **Database:** Oracle DBA, PL/SQL, MySQL, GCP Datastore, SQL Server, MS-SQL, Relational Databases, Schema optimization, Query optimization, Query processing, MongoDB
- **Cloud Technologies:** GCP, AWS, Cloud-native applications, Terraform, gcloud CLI, Pub/Sub, Cloud Run, etc.
- **DevOps Tools:** Docker, Kubernetes, Terraform, Bitbucket, Redis, Kafka, Gitlab
- **APIs:** RESTful APIs, Swagger, DocuSign, Salesforce Integration, SOAP, JWT, OAuth
- **Network:** TCP/IP, Subnet Masking, DHCP, Network Configuration
- **Software Architecture:** System Design, Architecture, Microservices
- **Testing:** Performance Testing, Test Automation, CI/CD Pipelines, TDD, BDD
- **Observability:** Logging, Datadog
- **AI / ML:** TensorFlow, Feature Extraction, Image Processing, Neural Networks, MATLAB, Notebook
- **Other Skills:** Data Migrations, Performance Tuning, Linux/Unix, Agile Methodologies
- **Software Engineering:** Software design principles, Multi-threading, Memory management, Technical insight, Scalability, Full Stack Development, HTML5, CSS3, Software Development, VisualBasic, Git

Professional Experience

Achieve

Oct 2019 - Nov 2024

Senior Software Developer

Tempe/AZ

- Architected and implemented a scalable microservices-based Agreement Service using Java (Spring Boot 3) to modernize a legacy PHP system, leveraging IoC and dependency injection for modularity, Kafka and Redis for strong consistency and resilient event processing, and Kubernetes/Docker on GCP to achieve 99.9% uptime and high availability.
- Enhanced processing speed by 300% for change management and document workflows through a dynamic template system, directly boosting system performance.
- Integrated Kafka consumers for real-time status tracking and event-driven reliability, showcasing expertise in asynchronous messaging.
- Automated CI/CD pipelines using Terraform and Bitbucket to streamline cloud deployments in alignment with Agile methodologies.
- Automated cloud resource provisioning and deployment on Google Cloud Platform (GCP) using Terraform and GCP SDKs (gcloud CLI, client libraries)
- Monitored and optimized performance using Datadog and logging tools, reducing issue resolution time by 40% and ensuring deliverable quality.
- Implemented DocuSign and Salesforce API integrations via RESTful and SOAP protocols, reinforcing secure system communications.
- Strengthened security protocols by integrating OAuth and JWT authentication to enforce robust access controls and data protection measures.
- Reduced MySQL query execution time from 3 seconds to 50ms through strategic indexing and query optimization, supporting high-performing relational databases.
- Deployed Redis caching to alleviate database load and improve response times, contributing to an efficient product data management system.
- Modernized legacy systems by migrating PHP-based services to a Java 17 / Spring Boot 3 microservices architecture, including upgrades from Java 8 and Spring Boot 2, resulting in improved performance, maintainability, and scalability.

- Mentored and onboarded over 5 developers, fostering collaborative code reviews and guiding software design decisions to elevate team performance.
- Applied Test Driven Development and automated REST API test cases in Java and Spring Boot, reducing production defects by 40% and ensuring reliable releases.
- Directed the development and maintenance of backend services, including Java, PHP, Node.js, Typescript, React, and CSS to drive design excellence and ensure high system availability.
- Architected and implemented a high-scale Agreement Service REST API using Java and Spring Boot 3 to modernize a legacy monolithic PHP system, leveraging clean code, IoC, and dependency injection for testability and modularity.
- Led the successful transition from a monolithic architecture to a microservices-based system deployed on GCP using Docker and Kubernetes, enhancing scalability and deployment agility.
- Applied the Outbox Pattern to reliably process Salesforce updates using Laravel background jobs and MySQL queuing, ensuring safe eventual consistency in event-driven communications
- Developed a forecasting algorithm using Python, TensorFlow, FastAPI, Pytest, and Django as a personal project while at Achieve, testing financial market predictions based on historical data and real-time indicators.
- Owned distributed system reliability, implementing retry logic, timeouts, and queue decoupling to ensure system health under load.
- Migrated between AWS DB schemas from Oracle to PostgreSQL using AWS ETL tools.
- Applied Test-Driven Development (TDD) and Behavior-Driven Development (BDD) practices, automating REST API tests with JUnit and Cucumber (achieving 80% code coverage) in Spring Boot, reducing production defects by 40%, and ensuring stable, testable releases.

NW Horizon Dreams LLC

Dec 2017 - Sep 2019

Software Developer

WA

- Configured and optimized Linux web servers on AWS using LAMP architecture to ensure high availability and performance in cloud environments.
- Led the migration of an Oracle database to PostgreSQL on AWS, refining queries and data structures to enhance scalability and cost efficiency.
- Developed and maintained scalable e-commerce platforms with integrated RESTful APIs, focusing on clean design and production-quality code.
- Engineered data pipelines and automated ETL processes to ensure seamless data integration and reliable information flow across systems.
- Collaborated with cross-functional teams to design and implement marketing materials that enhanced digital presence for B2B and B2C clients.

Fatih University

Jun 2005 - Jun 2016

Lead Developer + Database Architect

Istanbul/Turkey

- Designed and Led an automation system for student registration, scheduling, and grading, deployed at 15+ universities, leveraging Oracle PL/SQL, SQL, and stable transaction management for high reliability.
- Developed and optimized PL/SQL stored procedures to handle real-time curriculum-based calculations, reducing processing time and improving efficiency.
- Integrated WebSocket communication via Node.js to web services using Oracle Stored Procedures, enabling real-time data synchronization across platforms.
- Optimized Oracle database queries and transactions, reducing execution time significantly for complex queries related to student records, scheduling, and grading automation.
- Implemented full-text search using Oracle Text, providing Elasticsearch-like capabilities within Oracle DB.
- Designed high-availability backup and disaster recovery strategies, ensuring data integrity and minimal downtime in case of failures.
- Managed database performance tuning, indexing strategies, and query optimization, improving system responsiveness and reducing data retrieval time by over 80%.
- Reduced exam scheduling conflicts to 0 by implementing an innovative timetabling algorithm that optimized university resource usage by 95%.
- Built interactive portals and dynamic reporting systems using PHP, JavaScript, AJAX, and Oracle, providing real-time analytics and decision-making insights.
- Developed image processing models for pattern recognition, including license plate detection and experimental pupil tracking using MATLAB and rule-based AI.
- Automated repetitive tasks in Microsoft Office Suite by developing custom macros with VBA, improving efficiency and reducing manual work.

Education

Fatih University

MS, Electrical & Electronics Engineering

- **GPA:** 3.92
- **Coursework:** Pattern recognition, image processing, Optimization algorithms, AI, NN, BioMedical

Gaziantep University

BS, Electrical & Electronics Engineering

Certifications

- **Oracle DBA I & II, Backup & Recovery:** 2005
- **Coaching & Leadership Certificate:** 2010
- **Advanced Riding: ADAC/ROSPA:** 2013/2018
