---

**Professional Summary:**

- 7 + years of extensive experience in Analyzing, Designing, and Implementation of QA testing strategy for **Web-based and Client/Server applications** using **Manual and Automation testing**. Strong analytical, communication, problem-solving, decision making and organization skills and an excellent team player.
- Extensive experience in Quality Assurance Life Cycle (**QALC**) aspects such as developing Test Plans, Test Cases (**Manual / Automated**), Defect Reports, and developing Test Scripts, Traceability Matrix, and Test Environments.
- Experience in Page Object Model (POM), Data Driven, Behavior Driven Development and Keyword Driven: Framework with Web Services tools like SOAP UI, REST API.
- Solid understanding and working experience working on **AGILE methodology** and involved in all phases of **Software Development Life Cycle (SDLC)** and **Software Testing Life Cycle (STLC)**.
- Experience in developing and executing **Testing Lifecycle, Test Plan, Test Cases, Test Execution, Defect Report, and Requirement Traceability Matrix**.
- Experienced in **Web Services and API testing** by using **SoapUI**.
- Experienced in using **Postman** for **API testing** using POST, GET, PUT, and DELETE.
- Expertise in the Bug tracking process, familiar with Bug Reporting and Tracking using Defect Management tools (**JIRA, HP QC, TFS**).
- Performed back-end testing by executing **SQL queries** such as **stored procedures** over various database products on the Window platform.
- Working knowledge in Cloud test using Blaze Meter with JMeter with REST, web/http services, JSON, messaging, real-time, authentication/authorization.

- AppDynamics installation, Administration, upgrading, Troubleshooting Console issues and database issues.
- Experience in the development of **Data-Driven, Behavior Driven** Automation frameworks using tools like **Spec flow** and **Cucumber**.
- Experience in **analyzing** business **requirements, Functional requirements, and Use cases**.
- Hands on experience in profiling and performance monitoring. Hands-on experience in HP LoadRunner, Performance Center & JMeter tool.
- Demonstrated ability to interpret business requirements to actionable **test plans**.
- Professional experience in Automation testing using **Selenium WebDriver** and **QTP/UFT**.
- Proficient in all phases of **Test Life Cycle** from test planning to **defect tracking** and managing **defect life cycle**.
- Knowledge of **eCommerce**, Retail Data Warehouse application, **POS** applications.
- Expertise in Manual and Automation Testing of Client/Server, Mobile, Web - based, API and Cloud (AWS) applications.
- Experience in manual testing using the user interface and proficiency in **Black Box Testing, Regression Testing, User Acceptance Testing**, and experience in **Bug Tracking**.
- Experienced in a high-level language like **C# and Java**.
- Good experience with **Selenium IDE** on creating **C# or Java** test scripts for **Black Box Testing** and **White Box Testing**.
- Logging defects using different **bug tracking tools**, retesting defects, and generating **Defect Reports**.
- Strong experience in functional and **UAT** testing using **Selenium Web Driver** on both platforms as well as cross-platform web testing on all major web browsers (**Safari, Google Chrome, Firefox, and IE**).
- Proficient with container systems like Docker and container orchestration like EC2 Container Service, Kubernetes, worked with Terraform.
- Experienced in writing **SQL** queries for backend testing and validation of data.

- Extensively used web services validation tools like **RESTful**, **SOAPUI** to validate **SOAP/REST** and web services for Request and Response.
- Regular Status report maintenance and reporting leads in a proactive approach so that the team accomplishes deadlines.
- Expertise in using Selenium Webdriver, Selenium Grid, Javascript, Protractor, Angular, Junit, TestNG.
- Experienced in creating Automated Web services testing processes using SoapUI NG Pro tool and Karate DSL framework.
- Ability to learn new concepts and applications quickly and able to work in short schedules and on different applications concurrently.
- Working experience on Continuous Integration tools like **Jenkins**.
- Knowledge of **Object-Oriented Programming (OOPS)** Concepts like **Interface**, **Abstract**, **Static** and **non-static variables** and **methods**, **Abstraction**, **Inheritance**, **Polymorphism**.
- Documented and tracked defects and produced detailed reports using **Jira** and **TFS (Team Foundation Server)**.
- Excellent experience with source version control tools such as **SVN**, **Source Tree**, and **GitLab**.

#### Technical Skills:

|                           |                                                                                                                                                                      |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Testing Tools</b>      | Selenium WebDriver, JUnit, TestNG, QTP, HP Quality Center/ALM, Postman, Soap UI, KArate, Playwright, Specflow, Jmeter, Cucumber, TFS, Jira, Xray, Blazemeter, Appium |
| <b>Languages</b>          | C#, Java, HTML, CSS, XML, SQL, Javascript                                                                                                                            |
| <b>Web Debugging Tool</b> | XPath, Fire Path, Firebug                                                                                                                                            |
| <b>IDE and Tools</b>      | Visual Studio, Eclipse, IntelliJ, SSMS, Maven                                                                                                                        |

|                                     |                                       |
|-------------------------------------|---------------------------------------|
| <b>Continuous Integration Tools</b> | Jenkins, Bamboo                       |
| <b>Methodologies</b>                | Agile-Scrum, Waterfall, TDD, BDD, DDD |
| <b>Defect Tracking Tools</b>        | TFS, Jira, Quality Center             |
| <b>Databases</b>                    | SQL Server, MS Access, My SQL, Oracle |
| <b>Operating Systems</b>            | Windows, UNIX, LINUX                  |

### Professional Experience:

**Fidelity Investments - Westlake, TX**

**SDET/ QA Automation Engineer**

**July 2022 – Oct 2024**

### **Responsibilities:**

- Involved in the creation of detailed **Test plan**, **Test Scenarios** and **Test cases** according to the business requirements.
- Followed **Agile Methodology** for all the phases of **SDLC** and interacted with Lead, Business Analyst, Developers and other QA Members during Daily Stand-Up Meeting.
- Performed performance testing using **Jmeter**.
- Developed and Executed Test Scripts using **Selenium WebDriver** and analyzed Test Results. Validated all UI components, Browser navigations, Mouse Movement.
- Analyzed Business and Functional requirements of the application and worked with Business users to understand project requirements and to figure out the scope of test strategy.

- Responsible for working within a team to **create, document, and execute testing strategy, test plans, test cases, and test scripts.**
- Utilized **Xray** for Jira to efficiently organize and maintain test entities including executions, test sets, plans, and test cases across Agile sprints.
- Built and maintained automated testing scripts leveraging Selenium WebDriver, with Xray integration, using frameworks such as JUnit, TestNG, Cucumber, and RestAssured.
- Used Cucumber tags to run different test suites like **Smoke and Regression.**
- Developed and executed automated test scripts using **JavaScript** to ensure the quality and reliability of web applications.
- Implemented automated testing strategies for web applications using **JavaScript, Selenium, and WebDriver.**
- Designed Hybrid framework in **Selenium** and captured data dynamically from web controls.
- Performed Smoke Testing to make sure all the Test Channels and Test Environment are working as desired.
- Applied data-driven and parameterized testing techniques within the test suite, integrating them with **Xray** to enable scalable parallel test executions.
- Worked in an Agile environment participating in all phases of **SDLC** and **STLC** development process as well as assessed and analyzed user stories and participated in **Sprint planning, Sprint review, Sprint retrospective, and Daily Scrum meetings.**
- Created and implemented automated test scripts for **regression tests** and **Smoke Tests.**
- Created **REST API** test automation using Confidential karate framework.
- Worked on automation framework for UI testing and integrated it using **Selenium Webdriver** in **Visual Studio.**

- Leveraged Playwright's request and network mocking APIs for API testing in tandem with UI validations to simulate real-world scenarios with high accuracy.
- Scripted advanced **Playwright** UI automation workflows covering edge cases like tab switching, iframe interaction, and file uploads for comprehensive browser testing.
- Used **GitHub** to maintain and manage the build scripts, test data and other documents in the project scope.
- Used **Postman** to conduct manual **Web Services Testing** by sending various requests such as GET, PUT, POST, and DELETE.
- Performed operations on the database using **SQL Connection class APIs** and implemented **SQL** queries to validate **UI** with **Database**.
- Executed **SQL queries** to verify the proper insertion, deletion, and updates in **SQL** supporting tables and cubes for Data validation and Database integrity.
- Performed **cross-browser testing** to check if the application can work on Internet Explorer, Firefox, and Chrome browsers.
- Implemented unit testing and debugging processes to ensure the reliability and stability of **JavaScript** code.
- Knowledge of **Object-Oriented Programming (OOPS)** Concepts like Interface, Abstract, Static and non-static variables and methods, Abstraction, Inheritance, Polymorphism.
- Identified, developed and reviewed systematic procedure for each **test case** after going through the documents provided.
- Involved in extensive data validation, back-end testing and querying the database using **SQL queries**.
- Conducted load testing by simulating activity of users with **JMeter**, verified system load for **HTTP requests**.
- Discussed enhancement and modification request issues and defects in the application.

- Experienced in using **Jira** and **Bugzilla** for logging, tracking and reporting bugs in the application, creating tasks and user stories, and initiating change requests.
- Maintained **Traceability Matrix** to track the requirements of the **test cases** to ensure complete test coverage in the **Jira**.
- Effectively Communicated testing status to QA lead, project managers, and teams who are involved in User Acceptance Testing.

**Environment:** Java, JIRA, JMeter, JavaScript, HTML, CSS, SOAP UI, Python, Selenium WebDriver/IDE, Cucumber, TestNG, Jenkins, Maven, SOAP UI, Xpath, IntelliJ

**Telefonica USA - Miami, FL**

**SDET/ QA Automation Engineer**

**Feb 2020 – June 2022**

**Responsibilities:**

- Actively involved in **designing** and developing **test plans** and **functional test cases** from **business requirements** and conceptual documents.
- Participated in test designing and plan reviews with peers and stakeholders to plan and determine the effectiveness of testing.
- Experience in functional testing tools such as **SOAP UI** testing & developing scripts for QTP Automation testing.
- Worked closely with **Product Owners**, **Software Developers**, and other **QA team members** and was involved in the entire **Software Testing Life Cycle (STLC)**.
- Tested mobile (IOS) banking applications (Stocks, Options, Futures, ETFs) across cellular phones and tablets.
- Performed initial **debugging** procedures by reviewing configuration files, logs, or code pieces to determine breakdown source using **Charles Proxy**.

- Experienced with various test levels: smoke, **functional**, **usability**, **system integration**, **performance**, **regression**, and **user acceptance** manually as well as automated test scripts.
- Performed manual and automated testing using tools like UFT, LoadRunner, Selenium, Appium, Frameworks, Gherkin, Cucumber, and Jmeter.
- Created **BDD-style** feature files mapped to Xray test cases, ensuring comprehensive traceability from business requirements to test validations.
- Automated interaction with **Xray's** REST API to streamline bulk operations such as uploading results, updating test statuses, and managing test lifecycles programmatically.
- Identifying the Critical application for system resource utilization and JVM heap size was monitored using AppDynamics.
- Experience in setting up a test environment for automation script execution using Javascript, appium, and testNG.
- Built custom end-to-end automation solutions using **Playwright**, focusing on cross-browser compatibility between Chromium and Firefox environments.
- Connected **Playwright** test executions to Xray and Jira to ensure continuous feedback, requirement linkage, and transparent reporting for Agile stakeholders.
- Automated API services using the Karate DSL framework for Unit Testing, Integration Testing and Regression Testing.
- Integrated **Playwright** test scripts into CI/CD pipelines using Jenkins and GitHub Actions for continuous testing and reporting.
- Automated **web-based application** using **maven** and **pom.xml** to write the automation scripts using Selenium **Webdriver** and **Java** in **IntelliJ**.
- Automated **UI** and **API** of the web-based application after completion of **manual testing**.
- Maintained and implemented the Page **Object Model** design pattern along with the Page **Factory** to separate the test script and locators.
- Extensively worked on the TestNG framework to perform **unit testing** along with the Behavior **Driven Development (BDD)** framework using **Cucumber**.

- Used **POSTMAN** to manually test the **Restful web services API** using **POSTMAN** and validated the responses.
- Automated **web services/API** using **HTTP Client Library** and **Rest Assured Library** to send the requests and validate the responses in **JSON** format.
- Submitted defects (bug) along with tracking, reporting, and re-testing of defects using **JIRA**.
- Used **Soap UI** tool to test SOA-based architecture applications to test SOAP services and REST API.
- Created REST API test automation using Confidential karate framework.
- Created new AWS instances based on requirement.
- Participated in the release process through the confirmation of QA status, post-release testing, daily product stand-up meetings, etc.

**Environment:** Java, Selenium Webdriver, POSTMAN, Jmeter, Cucumber, Azure, Javascript, Karate DSL, TestNG, AWS, Jenkins, Blazemeter, IntelliJ, Jira, Oracle SQL, Maven, POM.xml, Charles Proxy, IOS device.

**L Brands, Columbus, OH**

**QA Automation Engineer**

**Oct 2018 - Jan 2020**

**Responsibilities:**

- Analyzed Business and Functional requirements of the application and worked with Business users to understand project requirements and to figure out the scope of test strategy.
- Responsible for working within a team to **create, document, and execute testing strategy, test plans, test cases, and test scripts**.
- Worked in an Agile environment participating in all phases of **SDLC** and **STLC** development process as well as assessed and analyzed user stories and

participated in **Sprint planning**, **Sprint review**, **Sprint retrospective**, and **Daily Scrum meetings**.

- Created and implemented automated test scripts for **regression tests** and **Smoke Tests**.
- Executed each test case through Manual Testing using **Team Foundation Server** and prepared the automation scripts once the manual testing was conducted.
- Worked on **Team Foundation Server (TFS)** and **Microsoft Test Manager (MTM)** to effectively manage the product life cycle, create bugs, create tasks, user stories and initiate the change requests.
- Managed multiple Azure accounts with multiple VPC's for both production and non-prod where primary objectives included automation, build out, integration and cost control.
- Designed and developed an automation framework for UI testing using **C#** programming language and integrated it using **Selenium Webdriver** in **Visual Studio**.
- Developed **BDD** tests using **Specflow** by writing behaviors and step definitions. Developed required Selenium support code in **C#** for **Specflow**.
- Created an automation framework in **Selenium WebDriver** and **NUnit** using the behavior-driven approach like **Specflow**.
- Designed and maintained automated test suites for e-commerce websites and mobile applications using **Selenium** and **TestNG**, ensuring consistent and smooth user experiences.
- Led performance and load testing efforts for high-volume e-commerce platforms using tools like **JMeter** and **BlazeMeter**.
- Developed automation scripts for end-to-end testing of features such as promotions, discounts, and loyalty programs to ensure pricing accuracy and user engagement.
- Performed **API** testing to validate the integration between various retail systems including CRM, ERP, and payment gateways using **Postman** and **REST Assured**.

- Tested real-time synchronization of inventory across online and physical stores to ensure stock accuracy and product availability.
- Configured **VSTS (Visual Studio Team Services)** to build jobs for continuous Integration and Regression Testing.
- Used **GitHub** to maintain and manage the build scripts, test data and other documents in the project scope.
- Created test scripts using Confidential Load Runner (VUGen, Controller), Confidential Performance Center, Apache JMeter and BlazeMeter.
- Infrastructure automation using Cloud Formation Template (CFT) for automating AWS instances creation.
- Used **Postman** to conduct manual **Web Services Testing** by sending various requests such as **GET, PUT, POST, and DELETE**.
- Automated the **API testing** process by using **.NET HttpClient libraries**.
- Performed operations on the database using **SQL Connection class APIs**, and implemented complex **SQL** queries to validate **UI** with **Database**.
- Developed and executed **SQL queries** to verify the proper insertion, deletion, and updates in **SQL** supporting tables and cubes for **Data validation** and **Database integrity**.
- Performed **cross-browser testing** to check if the application can work on Internet Explorer, Firefox, and Chrome browsers.
- Discussed enhancement and modification request issues and defects in the application.

**Environment:** C#, Selenium WebDriver, NUnit, JSON, DOM, Postman, Azure, Blazemeter, AWS, Specflow, Agile, Internet Explorer, Chrome, Firefox, SQL, VSTS.

Community Health Systems, Nashville, TN

QA Engineer

July 2017 - Sep 2018

**Responsibilities:**

- Prepared Test Plan, Test Scenario, Test Cases, Test scripts, and Test data for the application as well as for the database verification based on the functional requirements.
- Reviewed the **Product Backlog, Functional Specifications Document, and Technical Documentation.**
- Attended Daily Scrum, Iteration Planning, Sprint Review, Sprint Retrospective, Sprint Grooming Session, and Release Planning Meetings.
- Created and implemented automation scripts for automating **Functional and Regression testing** using **Selenium WebDriver, Eclipse, IntelliJ IDEA, Test NG, Java, Maven, Log4j.**
- Implemented **Page Object Model** Automation framework with **Java, Selenium WebDriver.**
- Created automation using **Data Driven Framework** with **POM** to test the web application.
- Used Javascript for automation.
- Validated different types of **APIs** in the **Postman** Client tool and validated **API responses.**
- Used **SOAP UI** tool to test Web services using **SOAP** services and **REST API.**
- Created test reports generated out of **TestNG** and captured the error screenshots.
- Created pom.xml in **APACHE MAVEN** and ran the builds and integrated with Continuous Integration tools **Jenkins** for running the test on a regular basis automatically.

- Used **JIRA** for bug/defect tracking and reporting, also followed up with the development team to verify bug fixes and update bug status.
- Conducted backend testing using **SQL** queries to validate data for the database and used **SQL** queries for retrieving data from the database for executing user specific test cases.
- Performed **Parallel** and **Cross Browser testing** on different browsers like **Internet Explorer, Chrome, and Firefox** where multiple tests were run at the same time.
- Created the user documentation with screenshots for **UAT (User Acceptance testing)**.
- Used distributed Version Control System and Source Code Management tool **GIT** to track the history of the collection of files.
- Ensured the Offshore QA team has the expertise on application knowledge before starting the testing phase.
- Organized Defect Review Board meetings with the Project Team for daily updates on defects during execution.

**Environment:** Selenium WebDriver, Eclipse, IntelliJ IDEA, Javascript, Postman, SoapUI, Java, TestNG, Oracle, SQL, Jira, Jenkins, GIT.

**Lowe's, Mooresville, NC**

**QA Analyst/Performance Tester**

**Feb 2017 – Jun 2017**

**Responsibilities:**

- Created Test Plans, Test Cases and Test Approach/Strategy documents.
- Attend Change Request Meetings to ensure products and changes are fully documented for further Test changes.

- Manually tested the Web application to ensure the flow of the application functionality.
- Performed retesting after fixing the bugs manually.
- **Performed Load & Performance tests for web-based apps in HP LoadRunner tool and Used LoadRunner for Web Service, SOA and Web testing by creating SOAP request**
- Monitored test execution, host machines, database servers, web servers using **LoadRunner** monitors.
- Created customized **LoadRunner VuGen** scripts at API level with manual correlation, user defined functions, development libraries classes and methods, and error handling.
- Perform GUI, Functionality, Integration, System, User Acceptance, Performance and Backend testing of the application manually.
- Responsible for reviewing and verifying that **performance requirements** are documented and stated in measurable terms, Includes reviewing Architecture design, software design, and non-functional requirements documents.
- Created Test Plans and Scenario which describes the features and functions to be tested.
- Actively participated in various ceremonies such as **Daily Scrum Meeting, Sprint Review Meeting, Sprint Retrospective Meeting, Backlog Grooming Session**, etc.
- Detected, reported and tracked defects, developed reports using **Quality Center**.
- Interacted with the development team to resolve technical issues and investigated software faults.
- Worked closely with cross-functional teams to test and verify the functionality of order management systems (**OMS**), point-of-sale (**POS**) solutions, and inventory modules.
- Executed mobile automation testing on both Android and iOS retail applications using **Appium**, verifying key features such as barcode scanning and store locator.
- Engaged in user acceptance testing (UAT) alongside business stakeholders to align test automation strategies with retail KPIs and customer experience goals.

- Contributed functional and technical assistance/production support, including service requests and response, worked with **SQL**.
- Performed **Data Integrity Testing, Functionality Testing** and **Back-end testing**.
- Gathered business requirements from users and created designs for enhancements.

**Environment:** Quality Center, MySQL, HTML, CSS, SQL Server, Agile, MS Excel, LoadRunner, Performance Testing.

**Education:**

Masters in Information Technology, Johnson & Wales University, 2017
