

Maria Kellen

maria07kellen09@gmail.com

Lead Principal DevOps Engineer

Professional Summary

Highly skilled DevOps Engineer with over 13 years of extensive experience in leading and implementing scalable, resilient infrastructure solutions across major tech companies including Microsoft, Facebook, Walmart, Apple, and Verizon. Expertise in cloud platforms, container orchestration, CI/CD pipelines, and Infrastructure as Code (IaC). Proven track record of optimizing deployment processes, enhancing system reliability, and driving automation. Strong leadership, mentorship, and collaboration skills, with a commitment to continuous improvement and innovation.

Core Skills

- **Cloud Platforms:** AWS, Google Cloud Platform (GCP), Azure
- **Containerization and Orchestration:** Docker, Kubernetes
- **Infrastructure as Code (IaC):** Terraform, AWS CloudFormation, Azure Resource Manager (ARM) Templates
- **CI/CD Tools:** Jenkins, GitLab CI, CircleCI, Azure DevOps
- **Automation and Scripting:** Python, Bash, PowerShell
- **Monitoring and Logging:** Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Datadog, New Relic
- **Configuration Management:** Ansible, Chef, Puppet
- **Version Control Systems:** Git, GitHub, Bitbucket
- **Security and Compliance:** DevSecOps practices, Automated security testing
- **Performance Tuning and Optimization:** Capacity planning, System performance tuning
- **Serverless Computing:** AWS Lambda, Google Cloud Functions, Azure Functions
- **Automation Frameworks:** Selenium for automated testing, Custom automation scripts
- **Networking and Security:** VPC configuration, Network security groups
- **Database Management:** Relational databases (MySQL, PostgreSQL), NoSQL databases (MongoDB, DynamoDB)
- **Application Deployment:** Blue/Green deployments, Canary deployments
- **Infrastructure Monitoring:** New Relic, Datadog
- **Agile and DevOps Methodologies:** Agile project management, Continuous integration and continuous deployment (CI/CD)

Education

- Bachelor's degree in Information Technology, From University of Texas 2008
- Master's Degree in Information Technology, From University of Texas 2010

Professional Experience

Microsoft | Dallas, Texas | Aug 2022 – Current

Lead Principal DevOps Engineer

Description:

Maria Kellen

maria07kellen09@gmail.com

Lead Principal DevOps Engineer

Leading DevOps initiatives to enhance and streamline software delivery processes, ensuring high availability and security of critical systems.

Environment:

Azure, Kubernetes, Docker, Jenkins, Terraform, Prometheus, Grafana, Python, Bash, CI/CD, IaC.

Achievements:

- Implemented a robust CI/CD pipeline, reducing deployment time by 70%.
- Achieved 99.99% system uptime through enhanced monitoring and automation.

Responsibilities:

- Designed and implemented scalable Azure infrastructure.
- Automated deployment processes using Jenkins and Terraform.
- Managed Kubernetes clusters to ensure efficient container orchestration.
- Enhanced system monitoring and logging with Prometheus and Grafana.
- Led security compliance initiatives, integrating DevSecOps practices.
- Developed custom automation tools in Python and Bash.
- Facilitated cross-team collaboration to improve deployment workflows.
- Conducted performance tuning and capacity planning.
- Implemented disaster recovery strategies to ensure business continuity.
- Conducted regular security audits and implemented improvements.
- Oversaw infrastructure cost optimization efforts.
- Mentored junior DevOps engineers and provided technical guidance.
- Led incident response and root cause analysis.
- Developed and maintained infrastructure documentation.
- Implemented blue/green and canary deployment strategies.
- Managed cloud resource provisioning and optimization.
- Integrated third-party tools and services for enhanced functionality.
- Conducted code reviews to ensure adherence to best practices.
- Led training sessions on new technologies and tools.
- Automated compliance checks and reporting.
- Coordinated with product teams for feature rollouts.
- Established and maintained SLAs for system performance and uptime.
- Developed metrics and KPIs to track infrastructure performance.
- Managed vendor relationships and service agreements.
- Led the initiative for infrastructure as code adoption across teams.

Facebook | Dallas, Texas | May 2019 - Jul 2022

Principal DevOps Engineer

Description:

Spearheaded DevOps strategies to optimize and scale infrastructure, ensuring efficient and secure software delivery processes.

Environment:

AWS, Docker, Kubernetes, Terraform, Jenkins, ELK Stack, Python, Bash, CI/CD, IaC.

Achievements:

- Reduced infrastructure costs by 40% through optimization and automation.

Maria Kellen

maria07kellen09@gmail.com

Lead Principal DevOps Engineer

- Improved deployment success rate to 99.8% by refining CI/CD pipelines.

Responsibilities:

- Architected and managed scalable AWS infrastructure.
- Developed and maintained CI/CD pipelines using Jenkins and Terraform.
- Implemented containerization strategies with Docker and Kubernetes.
- Enhanced logging and monitoring systems using the ELK Stack.
- Automated infrastructure management tasks with Python and Bash scripts.
- Collaborated with development teams to streamline deployment processes.
- Conducted performance tuning and capacity planning.
- Led security integration efforts within the deployment pipeline.
- Provided technical support for production systems and incident management.
- Developed disaster recovery plans and executed recovery procedures.
- Conducted system audits and implemented necessary improvements.
- Ensured high availability and reliability of critical services.
- Mentored junior engineers and conducted training sessions.
- Facilitated cross-functional collaboration to improve operational efficiency.
- Implemented automated testing frameworks within the CI/CD pipeline.
- Developed comprehensive documentation for infrastructure and processes.
- Conducted root cause analysis for system issues and implemented solutions.
- Managed and optimized cloud resource usage.
- Led initiatives to adopt new technologies and tools.
- Established and maintained security and compliance standards.
- Coordinated with stakeholders to align DevOps strategies with business goals.
- Led the adoption of serverless technologies for cost-effective solutions.
- Implemented continuous improvement processes for DevOps practices.
- Managed infrastructure projects from planning to execution.
- Provided expert guidance on DevOps best practices and methodologies.

Walmart | Dallas, Texas | Oct 2016 – May 2019

Lead DevOps Engineer

Description:

Directed DevOps operations to enhance system reliability, performance, and security, ensuring seamless software delivery and infrastructure management.

Environment:

AWS, Docker, Jenkins, Terraform, Ansible, Prometheus, Grafana, Python, Bash, CI/CD, IaC.

Achievements:

- Improved deployment efficiency by 60% through automation.
- Achieved 99.95% uptime for mission-critical systems.

Responsibilities:

- Designed and managed AWS infrastructure for scalability and reliability.
- Developed CI/CD pipelines to automate deployment processes.
- Implemented container solutions using Docker.
- Orchestrated containers with Kubernetes for efficient resource management.

Maria Kellen

maria07kellen09@gmail.com

Lead Principal DevOps Engineer

- Automated infrastructure provisioning and management with Terraform.
- Enhanced monitoring and alerting systems with Prometheus and Grafana.
- Developed and maintained automation scripts in Python and Bash.
- Ensured security compliance across all deployment processes.
- Conducted performance tuning and capacity planning.
- Provided technical leadership and guidance to the DevOps team.
- Facilitated cross-team collaboration to optimize deployment workflows.
- Conducted disaster recovery planning and execution.
- Implemented automated testing in the CI/CD pipeline.
- Managed configuration management with Ansible.
- Conducted root cause analysis for infrastructure issues.
- Developed and maintained comprehensive documentation.
- Optimized cloud resource usage to reduce costs.
- Implemented logging solutions for better system visibility.
- Conducted regular system audits and implemented improvements.
- Provided mentorship and training to junior team members.
- Coordinated with development teams for feature rollouts.
- Managed vendor relationships and service agreements.
- Led the adoption of new tools and technologies to enhance infrastructure capabilities.

Apple | Dallas, Texas | Nov 2013 – Sep 2016

Senior DevOps Engineer

Description:

Enhanced and maintained infrastructure to ensure efficient and reliable software delivery, supporting development and operations teams.

Environment:

AWS, Docker, Jenkins, Terraform, Chef, ELK Stack, Python, Bash, CI/CD, IaC.

Achievements:

- Reduced deployment errors by 50% through improved automation.
- Increased application performance by 25% with optimized infrastructure.

Responsibilities:

- Managed AWS infrastructure and optimized resource allocation.
- Developed CI/CD pipelines for automated deployments.
- Implemented containerization with Docker.
- Automated infrastructure management using Terraform.
- Enhanced monitoring and logging with the ELK Stack.
- Automated configuration management with Chef.
- Developed automation scripts in Python and Bash.
- Conducted performance tuning and capacity planning.
- Provided technical support for production systems.
- Implemented security best practices in deployment workflows.
- Developed and maintained infrastructure documentation.
- Conducted system audits and implemented improvements.

Maria Kellen

maria07kellen09@gmail.com

Lead Principal DevOps Engineer

- Facilitated cross-team collaboration to improve deployment processes.
- Managed disaster recovery and business continuity plans.
- Conducted root cause analysis for system issues.
- Implemented automated testing frameworks.
- Optimized cloud resource usage to control costs.
- Provided mentorship to junior engineers.
- Led initiatives to adopt new technologies and tools.
- Coordinated with stakeholders to align infrastructure with business goals.

Verizon | Dallas, Texas | Mar 2011 – Oct 2013

DevOps Engineer

Description:

Supported the development and maintenance of infrastructure, automating deployment processes and ensuring system reliability.

Environment:

AWS, Docker, Jenkins, Python, Bash, CI/CD.

Achievements:

- Improved deployment speed by 30% through automation.
- Achieved 99.9% system uptime with enhanced monitoring.

Responsibilities:

- Maintained and optimized AWS infrastructure.
- Supported CI/CD pipeline development and maintenance.
- Implemented container solutions with Docker.
- Automated infrastructure management with Python and Bash scripts.
- Enhanced monitoring and alerting systems.
- Provided technical support for production deployments.
- Conducted performance tuning and capacity planning.
- Developed and maintained infrastructure documentation.
- Implemented security measures in deployment processes.
- Conducted system audits and implemented improvements.
- Facilitated collaboration between development and operations teams.
- Managed disaster recovery processes.
- Conducted root cause analysis for system issues.
- Optimized cloud resource usage.
- Supported the adoption of new tools and technologies.
