

Sr SDET

Name: Meghana Devisetty

✉: meghanad2508@gmail.com

☎: +1 (469) 287-8505

Professional Summary:

- Over 8+ years of experience as a QA Automation Engineer-SDET, extensively worked on Manual, Automation, DevOps Testing of Web Client Server, Cloud (AWS), Mobile, API, Web services applications.
- Experience on various domains such as Health Care, Ecommerce/Retail & Financial services.
- Expertise on creating automation test scripts daily as per the business requirement, integrate the same with regression test suite and with CI/CD pipeline and execute them.
- Expertise on understanding the business requirements of project and converting them to Test scenarios.
- Proficient in preparing test plan, test cases and test data as per the requirements with immense knowledge on SDLC and STLC.
- Expertise on requirement analysis, test execution, bug reporting & tracking.
- Involved in various types of testing like Smoke Testing, Regression Testing, Compatibility Testing and Automation Testing.
- Experience of using testing tools like Quality Centre, Microsoft Test Manager (MTM), Visual Studio, Team Foundation Server (TFS), Jira.
- Performed end-to-end software testing at various stages of application development by applying Ad-Hoc, Black Box, White Box, Security, Smoke, Configuration, Data-Driven, Positive/Negative, and Installation.
- Extensive experience in GUI, Regression, Functional, Integration, Accessibility, System, User Acceptance (UAT), Sanity, Stress, reliability, Compatibility, Cross Browser, Data Driven and Database Testing.
- Expertise on Bug reporting tools like JIRA and TFS.
- Experience in API testing using Rest API with knowledge of RESTful services.
- Experience and exposure on Rest Assured automation framework to prepare automated test scripts using Java and Experience in creating reports using Extent reports with TestNG.
- Expertise in automating Mocking API using wire Mock and Karate frameworks.
- Experience and exposure on Selenium Web Driver to prepare automated test scripts using core Java.
- Expertise in SQL Server and Oracle database for manual data validation.
- Experience in creating and implementing Mocha framework within Node.js and chai libraries.
- Expertise and Exposure on Playwright, Protractor, Cypress Automation testing for both Angular and Non-Angular pages using JavaScript.
- Proficient in using Bug Tracking Tools such as JIRA and ability to maintain all created bugs into Database.
- Created Requirement Traceability Matrix (RTM) including Test case preparation status, Test Case Execution Status, Defect Status and User Acceptance Testing Status.

- Hands on experience in Document Manager for any quick changes.
- Excellent understanding of Agile, Waterfall, V-Model, and software development life cycle methodologies.
- Skilled in developing and executing test cases manually and developed automation script with Selenium Suite.
- Experience in testing of BI/BW data stage and cloud snowflake and Netezza DB.
- Involved in component/integration automation testing for Microservices, Docker and mocking frameworks.
- Experience with SonarQube for code coverage and code quality, as well as knowledge of Spring Boot, Spring Cloud and AWS.
- Experience with the automation tools Rest Assured, Playwright, Cypress, Selenium, TestNG, Serenity, Maven, Jenkins for CI/CD.
- Experienced in using Jenkins pipeline as a Continuous Integration server to configure with GitHub and Apache Maven.
- API-level Performance Testing using tools like Rest API and SoapUI.
- Experience in testing Mobile applications and games in IOS & Android
- Worked on development of N-Tier architecture systems with application system development and web technologies like HTML and CSS.
- Worked on source version control tools such as TFS and GIT.

Key Skills:

Testing Concepts:	STLC, Testing Levels, Testing Types, Test Management
Programming Languages:	Java, JavaScript, TypeScript
Service Automation Tools:	Postman, SoapUI
Test Automation Tools:	Playwright, Cypress, Rest Assured, Protractor, Selenium WebDriver
Test Management Tools:	JIRA, TFS
Web Building Tools:	HTML, CSS, JavaScript
IDE:	IntelliJ IDEA, Eclipse, STS, Microsoft Visual Studio Code.
SDLC:	Agile Model, Waterfall Model
Database:	Oracle
Collaboration Tools:	Confluence, MS Office
Code Management Tools:	Git Stash, Bit bucket, Jenkins, Source Tree
Operating Systems:	Windows 7, 8.1, 10 & 11.
CI Tools:	Jenkins, bamboo
Version Control Systems:	Git / GitHub, GitLab
Web Services:	Rest, Rest Assured, Soap
Other Technologies:	Eureka, Kafka.
Monitoring Tools:	Splunk, App Dynamics

Educational Details:

 Bachelor of Technology from JNTU

Professional Experience:

Paysafe, Jacksonville, FL

Jan 2023 to till Date

Sr SDET

Summary of Duties:

- As a Software Development Engineer in Test (SDET), I involved in implementing the framework, developing automation scripts for the new User stories and maintain and run the Regression Scripts.
- Built test automation solutions in agile environment.
- Used Android emulators and IOS simulators to perform the Mobile Automation testing.
- Create automation test scripts daily as per the business requirement, integrate the same with regression test suite and with CI/CD pipeline and execute them on a regular basis.
- Review requirements, interact with business teams, stake holders to understand the business requirements and implement automation test scripts accordingly.
- Created Page Object Model Mobile automation framework on both IOS and for Android using Appium.
- Created from scratch end to end REST API's Assured automation framework for API test cases with Maven Project in Java.
- Managed Continuous Testing cycle in DevOps by Automating test cases and integrating with CI/CD pipeline
- Extracted, transformed, and loaded (ETL) data from diverse sources into data warehouse environments.
- Involved in ETL process testing using Informatica ETL tool.
- Generated and do follow up the reports from CI/CD.
- Testing multiple content controls that are created and incorporated into Team Foundation Server (TFS) work item types.
- Performed parallel execution of test cases using Selenium Grid.
- Integrated the test suites to Jenkins to execute them automatically after every successful deployment.
- Create Kafka Message Queues, Topics and Kafka Environment Using the chef scripts
- Create and maintain automated test scripts using Cypress and JavaScript.
- Develop test cases to verify the functionality and performance of web applications.
- Implement test frameworks and design patterns to improve test script maintainability.
- Created Cypress test automation framework from scratch for regression testing and integration testing for front end automation testing.
- Involved creation of comprehensive test automation framework using Page Object Model to reduce repetitive testing using Selenium WebDriver, Eclipse IDE, Java, TestNG and other APIs

- Execute and Identify Cypress automation test cases for checking the stability on daily basis.
- Strong background on Angular and NodeJS web application development.
- Worked on multiple POC's with latest technologies like Karate, Playwright
- Developed automated code will be pushed and responsible to validate the reports by running the Test Module using Azure Devops.
- Developed automated tests using Kafka consumers and producers to validate end-to-end data processing workflows, detecting, and reporting any discrepancies or anomalies in data integrity.
- Collaborated with development and operations teams to analyse Splunk logs and Kafka metrics, pinpointing root causes of test failures and driving continuous improvements in test coverage and effectiveness.
- Utilized Kafka and Splunk for test automation and troubleshooting.
- Data validation using Oracle.
- Developing Test Plans, Test Strategy, build Test Conditions and Test Cases, developing and maintaining Test Scripts, creating test data.
- Identify and create detailed test cases and map them to system requirements and design specifications.
- Developed, implemented and update Test Plans, Test Cases and Test Scenarios in Jira, Confluence.
- Developing test plans and automating test cases following standard testing frameworks and agile methodology.

Southwest Airlines, Dallas, TX

Nov 2021 to Dec 2022

Sr SDET

Summary of Duties:

- Strong Credibility as Software Quality Assurance professional with expertise in defining Testing Methodologies. Good exposure in SDLC (Software Development Life Cycle) and STLC (Software Test Life Cycle) and agile methodology
- Point of contact for the complete Onsite Testing team dealing with multiple teams and projects.
- Interact with Business users and technical teams to review business requirements and technical specifications.
- Delivered functional crosswalk between ALM/QC and TFS/MTM for QA consistency.
- Executed the automated regression test cases during every release and executed the daily regression test suites with CI/CD pipelines.
- Perform database testing, system testing, and support user acceptance testing (UAT) with business users.
- Conduct regression testing and smoke testing.
- Ensured development activities are delivered with quality and seamless integration into the Salesforce ecosystem.
- Develop frameworks for UI and REST API automation for products using Appium and Xcode XC Test.
- Compile and generate executable app builds from source using Xcode and Android Studio.

- Perform functional testing, GUI testing, and automation testing.
- Created Requirement Traceability Matrix (RTM) including Test case preparation status, Test Case Execution Status, Defect Status and User Acceptance Testing Status.
- Strong Experience in developing Test Plans, Test Strategy, build Test Conditions and Test Cases, developing and maintaining Test Scripts, creating test data.
- Worked on requirement analysis, test execution, Bug reporting and tracking.
- Developed BDD tests by writing behaviours and step definitions.
- Assisted Manager by providing automation strategies, Protractor, Cypress Automation and Serenity reports.
- Created Automation Test Scripts using Maven/POM Apache system with Jenkins pipeline and GitHub environments.
- Created and implemented Mocha framework within Node.js and chai libraries for Protractor automation and then converted protractor to cypress automation.
- Involved in all steps of testing process like – Involving product requirement discussions, developers design discussions, reviewing spec documents, Creating Use case/test script/ test cases etc.
- Preparing run books, QA sign off pages, release notes for each deployment. Created Splunk alerts and dashboards.
- Perform complete regressions then sign off for deploying services in prod.
- Integrated Splunk for log analysis and monitoring, enabling comprehensive visibility into system behaviour and performance metrics during test executions.
- Created custom Splunk queries and alerts to proactively identify software defects, performance bottlenecks, and regression issues, facilitating timely resolution and improving overall quality.
- Collaborated with development and operations teams to analyze Splunk logs and Kafka metrics, pinpointing root causes of test failures and driving continuous improvements in test coverage and effectiveness.
- Using Appium for mobile automation Testing.
- Manual data validation in SQL servers and Oracle database.
- Developed automated code will be pushed and responsible to validate the reports by running the Test Module with CI/CD pipeline.
- Implement Automation cases for API's and write logic for Component test cases, Acceptance test cases and certification test cases.
- Performed API testing by mocking using wire Mock and karate frameworks.
- Automate end to end REST API test cases using Rest Assured as Maven project in Java.
- Coordinate with development team for efficient resolution of open issues.
- Involved in component/integration automation testing for Microservices, Docker and mocking frameworks.
- Automation API with Rest Assured, frontend with Playwright, TestNG, Maven, Jenkins for CI/CD.
- Responsible for performing Smoke, Sanity, GUI, Functionality, Regression, Integration, System and Compatibility testing.

- Involved in DevOps Migration/automation processes for Build and Deploy systems.
- Participating in everyday scrum meetings (this project follows agile methodology)
- Derived user stories, breakdowns from epics.
- Written acceptance criteria for user stories.

MHK Health, CA

Jan 2020 to Oct 2021

Automation Engineer – SDET

Summary of Duties:

- Analysing the Business Requirement Document, High level and Low-level design documents.
- Create and review - Test scenarios, Test suite preparation, Test Data creation, Test case execution and Defect logging.
- Wrote Automation scripts using Selenium web driver.
- Automation of functional testing framework for all modules using Selenium Web Driver.
- Preparation of Test scripts using Selenium Web driver (Automation tool) with java for Functional Test cases.
- Used SOAP UI tool to test SOA based architecture application to test SOAP services and REST API.
- Automating the regression & project cases using Selenium.
- Used Jenkins continuous integration server to run automated test suites.
- Designed Hybrid framework in Selenium and captured data dynamically from web controls.
- Performing Failure Analysis for the regression failed cases using Selenium.
- Organize weekly meetings with Client leads & Onsite manager regarding the Automation status.
- Point of contact for Process related activities like Metrics reporting & Operation clarity.
- Review - Defect prevention plan and Software configuration management plan.
- Responsible for all aspects of project delivery (Test Design, Test execution and Test summary report) and management (Test metrics and Risk analysis) to client partners, offshore manager and Onsite manager.
- weekly meetings with offshore managers, Onsite Coordinator & Onsite manager to discuss the Project goals and report the health of the overall project status.
- Updating the application down time in Environment Tracker during test execution phase.
- Performed Integration Testing in Vendor Development environment and System Testing in SIT environment and User Acceptance Testing in Pre-Production Environment.
- Involved Preparation of Traceability Matrix and mapping the Test Cases with the requirements and Test Metrics in Quality Centre.
- Performed Regression Testing as part of every build.
- Developed SQL Queries for testing various Database validations.
- Implemented Selenium using TestNG framework with Java.

ACI Worldwide, Miami, Florida

Oct 2018 to Dec 2019

QA Automation Engineer

Summary of Duties:

- Worked closely with business analysts and developers for thorough requirements review and developing test scenarios.
- Performed various testing methods like Functional, Usability, Security, Navigational and UAT testing by creating automated scripts using Selenium WebDriver and manually.
- Developed automation test scripts using Selenium WebDriver.
- Extended TestNG framework by adding some helper classes and methods.
- Developed Selenium test cases using TestNG framework
- Worked on Data Driven Framework and MVC for Automation test scripts.
- Integrated Selenium WebDriver with existing API to test framework.
- Used Maven for building the WebDriver project.
- Developed System Test Cases and procedures to test various application points.
- Involved in Look and Feel testing of the application windows using the deliverables.
- Designed smoke, sanity, acceptance, functional and regression test cases.
- Used Firebug Tool to identify the Object's id, Name, XPath, link in the application.
- Developed test scripts for web services using SOAP UI and worked with XPATH.
- Performed various testing activities like GUI testing, functional testing, browser compatibility testing, regression testing.
- Analyze best automated and Manual Test approaches and identify improvements.
- Analyzed test results, tracked the defects and generated reports using JIRA.
- Ran SQL queries to perform Backend Testing.
- Attended project meetings, release meetings and QA status meetings.

Launch ship IT Media & Services, India

June 2016 to Sep 2018

QA Engineer

Summary of Duties:

- Analysed the user requirements, functional specifications and Use Case documents and created the Test Plans, Test cases for Functional testing
- Understanding Business requirements and functionality of the application
- Understanding and analysing the test cases
- Involved in development of automation scripts using Selenium automation tool and Java as Programming language.
- Involved in Automation team for development activities of regression.

- Involved in maintaining automated scripts for different Edge releases. This involves in identifying and making changes to the code wherever necessary.
- Tested the whole application in both IOS and Android mobile devices.
- Created Requirement Traceability Matrix (RTM) including Test case preparation status, Test Case Execution Status, Defect Status and User Acceptance Testing Status.
- Involved in component/integration automation testing for Microservices, Docker and mocking frameworks.
- Data validation with oracle.
- Involved in testing and validating all the standards that matches the e-commerce application.
- Performed end-to-end software testing at various stages of application development by applying Ad-Hoc, Black Box, White Box, Security, Smoke, Configuration, Data-Driven, Positive/Negative, and Installation.
- Involved in GUI, Regression, Functional, Integration, Accessibility, System, User Acceptance (UAT), Sanity, Stress, reliability, Compatibility, Cross Browser, Data Driven and Database Testing.
- Involved in providing Support to Automation Team during batch execution for build releases.
- Involving in management related activities related to the Quality.
- Testing Code changes and testing for major and minor enhancements.
