OBJECTIVE

A tenacious team-oriented IT professional as Software development Engineer in Test with diversified experiences in various technology environments. Currently looking for a challenging position as a manual and automation QA Test engineer in an organization that allows me to apply my diversified experiences in various technologies and enhance my knowledge.

Summary:

- Experienced in Software engineering in Manual testing, Automated test developing and framework design, mobile application testing, database testing, API testing for web based and client/server-based applications.
- Experience in Software Development Life Cycle (SDLC) and methodologies like Agile, Waterfall.
- Hands on experience in financial analysis, Risk Management, data science and analytics, Regulatory Compliance.
- Experience in developing Automation by using BDD framework, Cucumber, Gherkin, Selenium, Java, Junit, TestNG, Eclipse, Maven, JDBC, POI, QTP, SOAP UI.
- Experienced in performing various types of testing, based on project need, such as Automation, functional, Integration, End to End (E2E), Smoke, Ad-hoc, Risk-based testing, UAT, Data-Driven, Regression, UI, Static, Back-End, PT Testing, Browser compatibility testing.
- Sound knowledge of Object-Oriented Programming (OOP) Concept.
- Experienced in Page Object Model (POM) to automate functional and regression testing by creating test scripts using Java, JUnit, Maven, JDBC, POI and Selenium WebDriver in Eclipse.
- Hands-on experience in writing Selenium Selectors ID, Name, Link Text, CSS, XPath expressions to identify web elements using respective Selenium WebDriver for Microsoft Edge, Firefox, and Chrome.
- Extensive experience in logging and tracking defects using JIRA, ALM and Rally.
- Hands-on experience in testing web services for microservice validation based on REST, SOAP technologies utilizing tools like Postman and SOAP UI.
- Experienced in SQL, MariaDB, SQL Workbench, SSMS, MySQL, Oracle, SQL Server, Cassandra DB, Postgres SQL, GCP Cloud, Dynamo DB and Mongo DB.
- Experience in RESTFULL web service Testing using Rest Assured framework Java. Validated JSON formatted data, different http status code like 200, 201, 400, 500 etc.
- Good Experience in Appium for mobile testing in Android, IOS and Mobile Applications.
- Sound knowledge of Confluence link to help teams to collaborate and share knowledge efficiently. Also, to capture project requirements.
- Proficient in writing complex SQL Queries based on Joins, Group By, Having, to perform Back-End/Database testing and finding/prep test data.
- Strong written and verbal skills with the ability to present data utilizing programs such as Word, Excel (charts), and PowerPoint.

Technical Skills:

Project Methodologies:	Agile, Waterfall.
Languages:	JAVA, SQL, Gherkin, HTML, JSON, XML, Big Query SQL, Big Data, VB Script.
Testing Tools:	Selenium, QTP, SOAP UI, Postman, See Test, Appium
Open-source System:	Apache-Kafka, Grafana, JMeter
IDE:	IntelliJ, Eclipse, SQL Server Management Studio, Oracle SQL Developer.
Test Framework:	Cucumber, Karate, Junit, TestNG, Report Plugin.
Build Tool and Apps:	Maven, Jenkins, CI/CD, CircleCI, HTTP Client.
Framework/Library:	Selenium, Cucumber, Chai-Mocha, Rest assured, BDD framework, Jersey, POI, JDBC.
Bug Tracking Tools:	Rally, JIRA, HP Quality Centre (QC), TFS. Q-Test
Databases:	SQL, MariaDB, SQL Workbench, SSMS, MySQL, Oracle, SQL Server, Cassandra DB, Postgres SQL, GCP Cloud, Dynamo DB, Mongo DB
Business Applications:	MS Office, SharePoint, RXClaim-AS400, FileZilla, WinSCP, OMS (Order

	management System), Legacy System for OTCHS, API-Tester, BETA.
Repository Systems:	GitHub, GitLab, TFS, SharePoint.
Operating System:	Windows XP/7/10, Linux, macOS.
Other Tool:	Apache Kafka, Confluence, Slack, Microsoft Teams, Dropbox, Jira, Swagger, One Note.

Professional Experience

LPL Financial

Jan 2024 - Present

Senior Software Developer in Test:

Project:

Move Money IFS Upgrade for Check Migration and ACH: As a nation's one of the leading financial services companies, LPL enables advisors to focus on their clients by reducing the complexity of running their practices and they support their businesses. Move Money IFS Upgrade project is to migrate their existing transactions tracking system which is Client Works 7.08 to IFS 7.24 for migrating the vendor source IFS.

- Worked on upgrading the existing system for three different application- LPL, EQH, LPLE for validating the UI - Client works 7.08 to IFS 7.24. Successfully validated and deployed in the production for the Check functionalities for Check disbursement and ACH, Check Send, Check Deposit, Closed and Liquidation, Survey, NIGO process, eSignature, Adobe sign validation, Docu sign, Dashboard,
- Designed, executed and maintained well-structured API automated test scripts by using IntelliJ IDE for automating the Check disbursement transaction for Check Send for Microservices testing. Covered all the scenarios for One-time, Periodic transactions by combination of various withdrawals reason and delivery methods.
- Involved in UI Automation Infrastructure Development using Selenium. Created Test cases Using Element locators and Selenium Web driver methods. Executed Test cases and Reporting defects. Refactored legacy code to improve its structure and adhere to OOP principles. Used Apache POI for to interact with Excel files.
- Developed BDD tests using Cucumber by writing behaviors and step definitions. Developed required Selenium support code in Java for Cucumber written in Gherkin language.
- Validated all the test cases in the new UI and cross validated in the BETA Screen by using RCHK, AINS, DOC to validate the test data.
- Used Postman for REST (POST, PUT and GET) API Testing using Restful API, and Postman. Validated the XML, JSON body by using Json parsers along with the response, response time and error code by conducting API testing using Rest Assured.
- Conducted smoke, integration, regression, and End to End tests on products under development and release.
- Used qTest to add, track all the test cases, test execution and attaching test results and to associate with Jira story. Also used the Pre-Roll back and Post Roll back testing suit for the release day testing.
- Used 2 different Jira board, one for internal team and one for vendor, to support team agile project management, defect management.
- Used SQL queries to validate data by using cloud CyberArk. Also worked on Dynamo Db to get the data for the Check migration for using it to Automation and Ui testing

CVS Health, TX

Feb 2021 - Dec 2023

SDET II

Project: Successfully worked in various project including Modern Fulfilment Engine, Order Management System, Mepa NLX, Benefit Builder as an automation tester. Modern Fulfilment Engine is CVS current inventory

management system which is completely based on microservices. Main purpose of the project was to transition from the existing inventory system to move to this microservices.

- Designed, developed test automation for Inventory Reporting that has been used for Business to monitor CVS inventory, by using IntelliJ, Maven, kafkalytics, JAVA libraries and Selenium and TestNG Annotations. Used Apache Kafka to validate real time data validation.
- Executed testing cases by automating webservices via HTTP Client in Postman.
- Used JMeter to perform performance testing, functional testing, and load testing of CVS Application. Also used version control systems like GIT to build automation and code review tools.
- Validated the API response with the GCP cloud data in data store.
- Validated the message published to the Topic which was extracted from the Legacy DB and ensured the message was consumed by the date store.
- Worked closely with the ETL testing team using Informatica ETL Tool.
- For Order Management Project, successfully validated functional, regression, and E2E testing for various types of order including SFS (Ship from store), Vendor order, Indy DC order (CVS retail hub), RX order (SDD, NDD, ETW), Split Fulfilment, Narvar email notification, Covid vaccination order, OTCHS order for 4 different states, Claim orders, Delivery Notifications.
- Developed automated suits to run those test cases by using Java and Selenium and for regression purposes.
- Worked in Rx Claims Adjudication Platform using the latest cloud-based technologies to adjudicate any claim.
- Implemented test automation scripts for mobile testing using Appium for Android and IOS Applications.
- For Mepa NLX Project, worked for CareFirst Implementation and ePA Configuration to upgrade version 2013 to 2017 for four different clients and carriers – CAS, CMM, Superscript and HPNS. Previously successfully completed the Mepa-NLX Aetna Notification project and MedD project for Portal & Consumer project- SilverScripts.
- Developed reusable functional libraries, created custom objects, exception handling/Recovery Scenarios in QTP/UFT
- For Benefit Builder Project used RXClaim-AS400 for the validation.
- Confirmation of notification sent to MEDHOCK, Drug Authorization, Provider referring-rendering, different user and status, Auth creation, Inbound outbound.
- Formulary Management System (FMS), IVR- Management, People Safe. Worked in PBM (Pharmacy Benefit Management) which includes insurance providers and pharmaceutical manufacturers, formularies, negotiate rebates (discounts paid by a drug manufacturer to a PBM) with manufacturers, process claims, create pharmacy networks, review drug utilization, and occasionally manage mail-order specialty pharmacies.
- Worked with many commercial insurance company's health plan data to integrate or exchange with CVS Pharmacy data for example Medicare, Medicate, Aetna Health.

Tivity Health, AZ

Mar 2018 - Feb 2021

QA Automation Analyst

Project: This web-based intranet application has been designed to deliver personalized care to the health plan members to reduce the cost through proper scheduling of the national network of clinicians. This system allows the business user to schedule the appointment for the health plan member, based on their locations and needs. It also allows the business to perform various operations like change the plan per insurer's client's direction, Do not call, termination etc.

- As an automation QA of the team, carefully analysed BRD, TRD, Data mapping and other documents, performed risk assessment and created test scenarios, test plan and test scripts.
- Utilized Postman, Java, JUnit, POI, and SQL Query through JDBC, automated Back-end testing by Selenium to validate ETL processes for member health plan changes, phone number update, lab product add/remove.
- Developed test cases to cover functionalities like member search, plan change, schedule assessment, locate providers using Java, Selenium WebDriver, TestNG.
- Involved in data driven testing based on excel, flat file on the various application modules using positive and negative scenarios for maximum coverage.
- Used JIRA to log, track and report defects; also prioritize as critical, major, minor before assigning to POCs.

- Implement automated testing processes for web applications.
- Participated in a large volume of database testing by writing complex multi-level JOIN Queries and created mock-up data in the database using Update/Insert/Delete statements to condition test data.

Education

Master's in business administration

Master's in literature, Southern University

Bachelor of Science

Certificates

Full Stack Software Development: Building Scalable Cloud Applications

Safe Agile Certification
