

Nirupama Patel

Email: nirupatel7280@gmail.com

Ph#: 469-554-8657

<http://www.linkedin.com/in/niru-patel-a19933271>

Professional Summary:

- **Over 7 years** of experience in **Software Testing** as **Automation Engineer (Selenium)/ Software Quality Analyst/ QA Tester** in delivering critical solutions on various levels of **Quality Assurance** for **Web based and Client/Server** based applications.
- Experience in full Software Development Life Cycle (SDLC) and Methodologies and Validations to ensure Quality Assurance Control.
- Extensively experienced in Software QA performing **Manual and Automated Software Testing**, writing **Test plans and Test cases** using various Automation Tools.
- Good experience in creating automation framework along with developing, executing and maintaining automation testing scripts with **Selenium WebDriver**.
- Expert on **Selenium Automation** using **WebDriver and Server**. Heavy programming using **Java, Junit and TestNG**.
- Experience in using **Maven** to build and run the Selenium automation framework.
- Having good exposure to integrated testing artifacts with **Continuous Integration (CI)** with **Jenkins** server.
- Experience automation testing for Android and IOS devices with **APPIUM** using **Java** and **Selenium**. ● Experience in **Protractor** Angular UI testing **automation**.
- Experience in **creating Test Plans, writing and executing Test Cases, Manual Testing, and automated Test Execution**.
- Extensive experience in GUI, Regression, Functional, Integration, System, User Acceptance (UAT), Sanity, Performance, Stress, Reliability, compatibility, Cross Browser, Security and Database Testing.
- Experienced in working on **Selenium Web Driver** automation script in **Java** for Page Object Model (POM) cross-browser testing. Used testing annotations to group the test methods and for cross-browser. ● Good experience in Web Services testing using **SOAP UI/POSTMAN, XML, and WSDL**. Providing required input data to request **XML** and get the required data from response XML and use the response data from other request XML using **SOAP UI/POSTMAN**.
- Experience in using **SQL Queries** to make sure that data was entered properly in the right tables, when the data was entered from the front end screen.
- Excellent understanding of waterfall model and **agile methodology – SCRUM**.
- Excellent interpersonal skills, proven team player with an analytical bent to problem solving and delivering under high stress environments.
- Good analytical and communication skills and ability to work independently with minimal supervision and also perform as part of a team.
- Good experience in designing and development of Web Services using **C#.Net**
- Used **ADO.NET** Database Connectivity for storage and retrieval of data from Database.

Technical Skills:

Testing Tools	Selenium WebDriver/IDE/GRID, Soap UI, Postman, Cucumber BDD, Appium Protractor
Languages	Java, XML, C#
Test Framework	TestNG
Project Methodologies	Agile-Scrum, Waterfall
Defect Tracking Tools	Jira, Quality Center, HP ALM, Qtest
Build/ CI Tools	Maven, Jenkins
Packages	MS-Office Suite (Word, Excel, Access), MS-Project

Databases	Oracle, SQL Server, MS Access
Operating Systems	Windows variants, UNIX

Professional Experience:

Client: Optum, Minneapolis, MN (Sept 2023- current)

Role: Software Engineer/SDET

Skills: Java, Selenium WebDriver, TestNG, Maven, Cucumber, Eclipse, Jenkins, Postman, Appium, Protractor, Git, XPath, CSS, HP ALM, SQL, Agile and Windows.

Responsibilities

- Interacted with Project manager, business analysts and developers to understand the application design and functional specifications.
- Participated in creating the Technical Test Plan in the initial phase and during change requests. • Involved in developing test plan, test strategies, test scenarios, test scripts and test steps based on Business and System Use Cases.
- Responsible for fixing and maintaining regression automation test scripts for end to end testing using **Selenium WebDriver**.
- Performed Data driven testing using **Selenium WebDriver**, **TestNG** functions and JDBC Connections which reads data from scripts using property and **XML** files.
- Involved in Functional Testing as Unit test, Method test, Test Suite, Integration Testing using different **TestNG** methods.
- Involved in cross browser testing using **TestNG** and hands on working with **Selenium Grid**. • Used **Maven** for building the Web Driver project. Rerun script as a batch file through Maven and generated testing report.
- Involved in creation of automation framework in **Selenium WebDriver** using behavior driven approach like **Cucumber**. Parameterized test cases using different annotations.
- Integrated **Jenkins** with version controller (**GIT**) and scheduled builds to run automatically during a build release by invoking predefined maven commands.
- Involved in using **Appium** to develop Automation testing scripts for **Mobile Development** and client-server applications.
- Used **Protractor** to run end-to-end tests that are written in **JavaScript** and run with node. • Automate **regression testing** using hybrid framework i.e. both data driven and keyword driven using **Selenium WebDriver**.
- Developed and Executed Test Plans and Test Cases from **Requirements** and **Specification** documents. • Authored and Executed **Automation** and **Manual** Test Cases for **Functional testing** of various modules of the application.
- Developed GUI, usability, user acceptance tests with both Positive and Negative Scenarios, especially focused on logical scenarios of the application.
- Involved in providing the efficient locators strategy like **XPath**, modified **XPath** and **CSS** to run WebDriver script in stable condition.
- Involved in **Data Driven** Testing using **JDBC Connection** and validated services using assertion in **Postman**.
- Verified WSDL files, asserting the files using various In-build assertions, performed Data Driven testing, in **Postman**.
- Used **HP ALM** for defining & logging defects and **HP ALM** for writing test cases and executing test cases. • Conducted backend testing using **SQL queries** to validate data for database and Used **SQL queries** for retrieving data from database for executing user specific test cases.
- Tested the application in a highly dynamic environment with a sprint team using **Agile Methodology**. • Created QA sizing estimated based on the changes to the web services for the scope defined in a particular release cycle.

Client: SunTrust Bank, Atlanta, GA. (Apr 2022 – Sept 2023)

Role: QA Automation Engineer/SDET

Skills: Java, Selenium WebDriver, TestNG, Maven, Jenkins, Cucumber, Appium, Protractor, HP ALM, Eclipse, Postman,

Rest API, XPATH, GitHub, SQL, Windows.

Responsibilities:

- Analyzed the Business Requirements Document, put input in the Test Plan and prepared detailed Test Cases for new functionality.
- Involved in test cases review by development team, product management and modified the test cases based on their feedback.
- Developed Automation framework using **Selenium Web Driver**.
- Designed and developed Page Objects using Page Object Design Pattern and **Selenium WebDriver**.
- Performed functional testing to identify various critical points in the application and automated it by using **TestNG**.
- Responsible for creating the functional testing framework using **TestNG** and using **Selenium WebDriver** to automate the **UI components**.
- Developed **Maven** Build scripts to run Sanity Test scripts developed in **Selenium Web Driver**. ● Created automation framework in **Selenium WebDriver** using behavior driven approach like **Cucumber**. ● Created automation test plans and deployed test cases on **Jenkins** to have a continuous integration test. ● Used **GitHub** as central repository to perform Push, Pull, Stage, Unstage, Stash, Status, Add, and Clone and remove operations in local repository **GIT**.
- Developed **Requirement Traceability Matrix** (RTM) to ensure appropriate level of test coverage.
- Involved in testing GUI front-end applications in **Java and HTML**.
- Performed various testing activities like GUI testing, functional testing, browser compatibility testing, regression testing.
- Used **Appium** tool to be tested automation test scripts on both IOS and Android platforms for native and mobile websites on mobile devices.
- Involved in **End to End Testing** of applications using **Protractor**.
- Created and executed test cases, developed scenarios to meet software requirements using **protractor** framework.
- Involved in providing the efficient locators strategy like **XPath, modified XPath** and **CSS** to run **WebDriver** script in stable condition.
- Performed **REST API Testing** using Http java Test Client for **SOAP/REST web APIs**.
- Tested request and response **XML's** based web services interfaces using **Postman**. Performed Web Services Testing and XML validation by creating test case suite using **Postman**.
- Responsible for running the same tests on different browser versions as well as browsers (IE, Firefox).
- Analyzed test results, tracked the defects and generated reports using **HP ALM**.
- Responsible for preparing weekly status reports and validated the back-end data using **SQL queries** for data integrity.
- Involved in testing the application utilizing the **AGILE (Scrum)** methodology.
- Involved in documentation as to how to maintain and run scripts for future enhancements. Responsible for testing the application against different environments in **QA**, staging and production.
- Worked closely with different functional teams including Development, QA, Sales and Business.

Client: Voya Financial, New York, NY.(Jan 2021 – Mar 2022)

Role: QA Automation Engineer

Skills: Java, Selenium WebDriver, Maven, TestNG, Jenkins, Cucumber, Postman, Ruby, Appium, Protractor, XPATH, XML, Eclipse, Quality Center, Agile, SQL, Oracle, Windows.

Responsibilities:

- Analyzed the Business Requirements Specification, System Requirements Specification and User Interface Specification documents.
- Developed and executed Test Plans, Test scenarios, Test Cases, Test Scripts for Manual and Automation Testing. ● Developed and designed necessary test plans and test scripts for functional and performance testing using **Selenium Web Driver**.
- Worked on Automation framework using **Selenium WebDriver** to run test cases in multiple browsers and platforms.
- Created and Developed Automation test framework using **Selenium WebDriver** and executed **TestNG** Test Cases in **Eclipse IDE**.
- Used Java as client library for **Selenium WebDriver** to design and developed Automation test Framework using **TestNG**.

- Developed **Maven** Build scripts to run Sanity Test scripts developed in **Selenium WebDriver**. ● Expertise in developing Automation Framework with Selenium and C#. Where Created Nunit Framework. ● Proven success in establishment of agile test practices including acceptance test automation using **Cucumber (ruby scripting)** during acceptance test driven development methodology.
- Responsible for Integrating Selenium Tests with **Jenkins** for Continuous Integration.
- Used **GitHub** repository to run the Jenkins job for Continuous Integration.
- Involved in Mobile Testing by writing java for automation through **Selenium APPIUM**.
- Involved in writing automated scripts for Angular.JS application using **protractor** and Java. ● Involved in **GUI** testing, **integration** testing, **navigation** testing and **regression** testing using web and client-server applications.
- Tested request and response **XML's** based web services interfaces using **Postman**.
- Involved in Web Services Testing using **Postman** to create and execute automated functional, regression, compliance, and load tests.
- Tested applications in different types of **browsers and versions**, such as **Internet Explorer, Firefox, Google Chrome** to simulate production environments.
- **Quality Center** was used as the overall Test Management Tool, where scripts were located and stored under respective Project Folders.
- Involved in Back end testing using **SQL** queries. Performed **back-end testing** on **Oracle** and **SQL Server databases** by writing **SQL queries** to make sure the contents displayed on the **UI** correct as per requirements specifications. ● Followed **Agile** testing methodology, participated in daily SCRUM meetings and tested each SPRINT deliverables. ● Actively participated in Stand-up meetings, walkthrough meetings, weekly assessment meetings and daily bug triage meetings and interacted with developers and business analysts to ensure high quality of the application under test.

Client: Molina Healthcare, Long Beach, CA(Aug 2019 – Dec 2020)

Role: Automation Engineer (QA)

SKILLS: Java, Selenium WebDriver, TestNG, Maven, Cucumber, Jenkins, GitHub, XPath, XML, Eclipse, Postman, Quality Center, SQL, Agile and Windows.

Responsibilities:

- Interacted with Project manager, business analysts and developers to understand the application design and functional specifications.
- Effectively implemented different QA methodologies/policies, strategies and plans in all stages of SDLC.
- Designed and Developed Test Cases for automated testing using **Selenium WebDriver**.
- Involved in configuring application frameworks by processing excel spreadsheets using Apache POI and executing the test scripts parallel using **TestNG**.
- Executed test cases using **TestNG** parameters, data providers, groups and parallel test suites.
- Created automated Test Suite using **Selenium and WebDriver**.
- Performed the White box testing using **Java**.
- Created the tests that have no user interaction as a set and executed them as Batch tests using **Maven**. ● Maintained continuous test integration and automatic build by using **Jenkins** and mailed the build outputs to the team members.
- Maintained automation builds on Continuous Integration (CI) tool **Jenkins**.
- Used **Selenium WebDriver API** to automate tests on **cross browser** and **cross platform** environments. ● Wrote test cases, implemented ran and added versions and iterations using Test Manager for **positive, negative** and **END-TO-END** Test cases.
- Design and prepare test plans for White Box Test Approach & Test cases.
- Performed **Regression testing** of applications after defects are fixed and any new functionality is implemented into the QA. Supported the Business team for executing **UAT test cases**.
- Used **XML** files in Sending/receiving XML requests using **Postman**.
- Used **Postman** tool, to create a Web Service Test from SOAP request and validate the response against the database.
- Performed Defect Resolution and Maintenance using **Quality Center**.
- Verified backend data validation using SQL. Used **SQL** to verify data in the backend for the test entry points on **SQL** server database.
- Developed Business logic components in **C#** and Data access layer components using **ADO.NET, C#, Javascript** and **HTML**.
- Utilized **ADO.NET** technology extensively for data retrieving, querying, storage and manipulation. ● Worked in the

form of a sprint team with business analysts and developers in **agile** methodology. ● Involved in estimation and preparation of test case scenarios and test plan documentation for validating and reporting.

- Performed end-to-end functional and regression testing on key modules, including Claims, Eligibility, and Provider Portals.
- Collaborated with cross-functional teams to validate and maintain **Product Information Management (PIM)** systems, ensuring accurate and consistent healthcare product data across platforms.
- Verified health plan configurations, benefits data, and formularies within the PIM to support compliance and downstream systems.
- Conducted data validation tests between the PIM system and external systems such as Provider Directory and Enrollment systems.
- Coordinated with technical support associates to fix proprietary software issues.

Client: TJX, Framingham, MA(Feb 2017 – Jul 2019)

Role: QA Engineer

SKILLS: Java, Selenium WebDriver, SOAP, Eclipse, HTML, XPath, SQL and Windows.

Responsibilities:

- Analyzed functional requirements and documented the user specifications and business rules.
 - Involved in writing Test Plans and Test cases documents.
 - Designed automated tests, created automated test cases and executed tests using **Selenium WebDriver**.
 - Developed automated script for back-end testing using **Selenium IDE**.
 - Exported Test case Scripts (**Java-Selenium WebDriver**) in **Eclipse IDE** and modified the Selenium scripts and executed.
 - Defined **test automation strategy**, designed automated tests, created automated test cases, test plans and executed tests using **Selenium**.
 - Responsible for setting up the **framework** and **test environment**.
 - Tested compatibility of application for dynamic and static content under various cross browsers using **HTML IDs** and **XPath** in **Selenium WebDriver**.
 - Performed active regression, load, stress, volume and **performance** testing.
 - Performed functional testing to identify various critical points in the application and automated it by using **Selenium**. ●
- Performed Regression testing for new builds and every modification in the application using **Selenium WebDriver**. ●
- Validated sites across browsers and operating systems, verified the accuracy of links, visual presentation and its alignment with design specifications.
- Prepared a Report of all automation difficulties and test results for further application.
 - Performed data accuracy, data validation and data integrity testing by querying the database using **SQL queries** to check the data table on server.
