

PRATEEK VASIREDDY

MERN/.NET/REACT/RUBY/LARAVEL Developer

Profile Summary

- Full Stack Developer with deep experience with **React** for building dynamic and responsive front-end applications. Expertise in backend development using **Node.js**, building scalable **RESTful APIs** with **Express**, ensuring high performance and security.
- Well-versed with **GitLab/GitHub** for code collaboration, reviewing pull requests, and managing feature branches. Very familiar with **HTML5**, creating semantic, accessible markup that meets modern web standards and SEO best practices.
- Extensive experience in building robust enterprise applications using **C#** and **.NET Core**, focusing on performance, scalability, and secure coding practices. Experienced in deploying and managing applications on **AWS** and **Google Cloud Platform (GCP)**, utilizing services like **EC2**, **RDS**, **S3**, **Kubernetes**, and **Lambda** for cloud-native solutions.
- Highly specialized in **Ruby** and **Laravel** frameworks, with expertise in building scalable and high-performance web applications using modern technologies such as **PHP**, **JavaScript**, and **TypeScript**.
- Proficient in working with various databases, including **MySQL**, **PostgreSQL**, **MongoDB**, and **Redis**, ensuring optimized data storage and management solutions for complex applications.

Education

Arizona State University 
B.S. in Software Engineering
2022-Present

Columbia Law School 
Doctor of Law (JD)
2012-2015

University of Virginia 
B.A. Classics
2008-2012

Languages

English: Native
Spanish: B2
German: C1

Technical skills

Languages: JavaScript, TypeScript, Node.js, .NET (C#, VB.NET), Python (Django, Flask, Pyramid), SQL (T-SQL, PL-SQL), HTML, CSS, PHP, Ruby, Java, Rust, Scala, Go, Swift, Kotlin, GraphQL, JSON, XML, YAML

Databases: PostgreSQL, MySQL, SQL (T-SQL, PL-SQL), MongoDB, Redis, NoSQL (Cassandra, MongoDB), Firebase, SQLite, MS SQL Server, MariaDB, Elasticsearch, Starburst, Second Measure, Cosmos DB, Azure Blob Storage

Dev Tools: Git, GitHub, GitLab, Bitbucket, Docker, Jenkins, Kubernetes (K8s), Visual Studio Code, Webpack, NPM, Vite, Cypress, Jest, Postman, Jira, Agile, Redux, Next.js, ReactJS, React Native, Vercel, Tailwind CSS, Figma, PostCSS, Storybook, Vue.js, Sass, SCSS, CSS3, HTML5, UI/UX, Restful APIs, GraphQL, Apollo GraphQL, Firebase, Playwright, Composer, PHPUnit, Laravel Dusk, ESLint, Prettier, PHPStan, PhPcs, Behat, Pest, RSpec, Minitest, Terraform, SVN, Maven, CI/CD, Team Foundation Server

Cloud & Servers: AWS (EC2, ECR, ECS, RDS, Lambda, S3, CloudWatch), Azure (Functions, Service Bus, Synapse Analytics, Blob Storage), Google Cloud Platform (GCP), Cloudflare, Firebase, Vercel, Heroku, DigitalOcean, OpenShift, AWS Lambda, Nginx, Apache, Linux Servers, Swoole

Professional Experience

Mercor *Senior Software Engineer*, Contractor

Remote Jan 2025 - April 2025; May 2025 - Present

- Collaborated with technical teams (engineering, DevOps) and non-technical stakeholders (product managers, leadership) to define telemetry requirements, align system architecture with business objectives, and communicate trade-offs between scalability, performance, and delivery timelines.
- Developed interactive analytics dashboards using **React.js** and **D3.js**, building custom data visualizations and performant SVG rendering pipelines to display real-time business metrics with high fidelity and responsiveness.
- Built comprehensive unit, integration, and snapshot tests for **React** components using **Jest** and **React Testing Library**, enforcing high coverage standards (85%) and enabling rapid, confident iteration across large-scale front-end codebases.
- Improved application performance by implementing lazy loading, dynamic imports, memoization (useMemo, React.memo), and bundle splitting strategies, reducing initial page load times and critical rendering path bottlenecks significantly

Beezwax Datatools *Senior Software Engineer, Full-stack Web Development*

Remote May 2023 - Jan 2025

- Developed a backend application from scratch, with components in **Node.js/TypeScript** and components in **Ruby on Rails**, to handle all automated job-posting features for a market-leading client organization.
- Increased the scalability of the client's core business by greater than 50 times compared to their previous off-the-shelf software solution, using **AWS**, **Docker**, and **SQL Server** for cloud-based hosting and data management.
- Adding new features to Beezwax's flagship web application, a custom CRM, to increase engagement and new contracts from prospective clients.
- Utilized **Ruby on Rails** with Hotwire, integrated **RESTful APIs**, and applied **Agile** methodologies with a focus on DevOps practices to streamline development and deployment.
- Led the design, development, and deployment of high-performance **.NET** applications, improving system efficiency.
- Used **Python** for backend automation and scripting, streamlining server-side operations and reducing manual intervention.
- Integrated **C#** with **MongoDB** to enhance data processing and storage efficiency. Led the design and implementation of **RESTful APIs** for seamless integration with front-end services.
- Utilized **HTML5** and **CSS3** to build dynamic, user-friendly interfaces, integrating seamlessly with **Ruby on Rails** and **Laravel** backends.
- Implemented efficient state management with **Redux Toolkit** and integrated **RESTful APIs** and **GraphQL** to optimize data flow and communication between components.

Instride - Strategic Enterprise Education Platform Engineer

Los Angeles, CA Mar 2021 - May 2023

10. As a Platform Engineer, performed the duties of a Senior Software Engineer, mid-level Architect, and domain-level Tech Lead.
11. Used **Ruby on Rails**, **React.js**, **Next.js**, **TypeScript**, and **JavaScript** to maintain and build new features on the primary user-facing web application.
12. Built multiple core modules for the "Learner Pathways" page to align with the product team's **UAT** and **A/B testing**. Resulted in signing on new high-profile clients such as **Ascension** and **Amazon DSP**.
13. Used **Ruby on Rails** to build new microservices to support Learner Pathway and Search features, resulting in faster release cycles that allowed the business to respond within two days to customer feedback.
14. Served as tech lead and domain architect for the adoption of Micro-frontend architecture through **React.js** and Module Federation. Utilized **Jest** and **Cypress** for automated testing to ensure high-quality and reliable code.
15. Leveraged **ReactJS**, **TypeScript**, **Redux**, **GraphQL**, and **Tailwind CSS** to maintain and develop new features for the primary user-facing web application.
16. Worked closely with the two company-level head architects. This work solved previously undiagnosed navigation speed bottlenecks, and allowed all core frontend modules to be released through continuous deployment, rather than two-week release cycles.
17. Implemented **Docker** containers for local development environments, enabling faster and more reliable deployments across different environments.

Dave Inc. Software Engineer II, Platform Team

Los Angeles, CA Apr 2019 - Mar 2021

18. Used **Node.js**, **TypeScript**, and **MySQL** to improve the back-end advance repayment system based on revenue data and **A/B testing**. Reduced incidents of multiple charges and payments stuck in pending, and increased average repayment rate from 95 to 98%.
19. Applied advanced **CSS** techniques with **Tailwind CSS** to create a responsive and accessible design. Integrated dynamic data handling with **RESTful APIs** and optimized the UI with **React Suspense** and lazy loading to reduce load times and improve user experience.
20. Created the majority of the cloud infrastructure for the service and ported most of the legacy system's code into a cleaner, more algorithmic design, utilizing **GCP** and **AWS Lambda**.
21. 24. Integrated **GraphQL APIs** and **Docker** for seamless backend connectivity and deployment. Leveraged **Webpack**, **Jest**, and **Cypress** for testing and automation, optimizing the development process within an **Agile** environment.
22. Developed dynamic, single-page applications with **Vue.js**, integrating with **RESTful APIs** for real-time data updates. Leveraged **Vue.js** components to improve reusability and maintainability of the front-end code.
23. Improved our third-party service authentication with payment providers, for example by caching **OAuth** tokens to avoid rate limits and save hundreds of thousands of dollars in fees. This involved integrating with **AWS**, **Google Cloud Platform (GCP)**, and **Azure** cloud services. Utilized **Agile** methodologies, **Scrum**, and **Jira** for project management and version control.
24. Served as a founding member of the platform/architecture team, as the company grew from having hundreds of thousands of monthly users, to millions of monthly users with >\$50 million in revenue per month. Led the implementation of **Kubernetes** and **Docker** for containerization and deployment, and ensured scalability with **AWS**, **Azure**, and **Google Cloud Services**.

Vegan Hacktivists Software Development, Team Lead

Amsterdam, Netherlands Aug 2019 - Mar 2021

25. Founding member, tech lead, and recruiter for "Team Banana," which created the Vegan Activism website and V2 of Vegan Bootcamp.
26. Primarily used **PHP (Laravel)** and **JavaScript** frameworks, including **React**, for front-end development and **Node.js** for backend services, leveraging **RESTful APIs** for communication.
27. Implemented **.NET Core**, **ASP.NET MVC**, and **Entity Framework** for backend services, with a focus on **C#**, **SQL Server**, and **SQL** for data management.
28. Led the development of highly interactive web applications using **React.js**, **JavaScript**, and **TypeScript**, while integrating **Redux** for state management and optimizing performance with **React Virtual Table**.
29. Enhanced team collaboration and version control using **GitHub** and **GitLab** while optimizing deployment pipelines with **Docker** and **CI/CD** practices. Applied **Agile** methodologies to deliver iterative, user-centric solutions aligned with client needs.
30. Integrated **React** with **Next.js** for server-side rendering, improving performance and SEO. Interacted with and managed team members and client organizations from multiple countries and time zones, using **Python** to streamline project workflows.
31. Led the adoption of **DevOps** practices, leveraging **Terraform**, **Ansible**, and **Docker** for infrastructure as code and automation.
32. Conducted code reviews and maintained high coding standards using **TDD**, **LINQ**, and **SOLID** principles.

Biopharma Software Developer, KBI

Research Triangle Park, NC Jan 2017 - Mar 2019

33. Joined an existing web application team that focused on crowdfunding features. Served as tech lead, architect, and primary developer in the creation of a search feature that grew the application's audience from a handful of users a month to being one of the main partner websites for hundreds of childhood cancer organizations.
34. Leveraged **React**, **JavaScript**, and **TypeScript** to implement a scalable and dynamic search feature that enhanced user engagement. Migrated frontend to **React** and **Next.js**, improving performance and responsiveness across devices.
35. Worked with **RESTful APIs** and integrated third-party services, including **AWS Lambda**, for seamless data processing and scalability. Architected the UI using **Next.js**, **CSS3**, **SASS**, and **Tailwind CSS** for a responsive, user-friendly experience.

36. Transformed legacy code into a modern, microservices-based architecture using **Node.js**, **Docker**, and **AWS** services, including **S3** buckets, **AWS Lambda**, and **AWS Cognito**.
37. Applied **CSS3**, **HTML5**, and **Bootstrap** to ensure responsive design and a user-friendly interface.
38. Designed and implemented a scalable, performant search feature using **React.js**, **Redux**, and **GraphQL**, increasing the platform's user base and engagement.
39. Collaborated with cross-functional teams using **Agile** methodologies, fostering effective communication through **Jira** and **GitLab** for version control and CI/CD pipelines.
