

Prerana Doosa

DevOps Engineer AWS / Azure

Ph : [2145317523](tel:2145317523) | Mail: preranadoosa06@gmail.com

PROFESSIONAL SUMMARY

- Overall, 10 + years of experience in **DevOps, Build and Release** Engineering with expertise in AWS and complete understanding of Software Development.
- Expertise in DevOps tools such as GIT, GitHub, Jenkins, Maven, Ansible, Chef, Puppet, Docker, Kubernetes, AWS, Azure, Terraform, Splunk, and Nagios.
- Experienced in Continuous Integration (CI) and Continuous Delivery (CD) process implementation using Jenkins, TeamCity, and Bamboo.
- Administering large PostgreSQL databases with the ability to do performance tuning index maintenance experience of backing up and restoring PostgreSQL databases regularly.
- Designing and managing PostgreSQL database schemas; experience in security access control; experience with testing and configuration management; experience with version control integrating, maintaining, developing, staging, and production of PostgreSQL and PostgreSQL databases.
- Monitoring databases to optimize database performance and diagnose any issues.
- Good knowledge of Configuration Management Tools such as Chef, Ansible, Puppet and Automated Linux production server setup using the Chef cookbooks, and Ansible playbooks.
- Experience with Docker containerized environment, hosting web servers on containers, and building Docker images using Docker.
- Experience in SAP hybris and ERP integration as part of SAP-ERP Backend integration with real-time data exchange.
- Expertise working with Kubernetes to automate deployment, scaling, and management of web containerized applications.
- Worked on Kubernetes to orchestrate Docker containers of new and existing applications and deploy and manage complex run-time environments.
- Expertise in administering and automating operations across multiple platforms (UNIX, Linux, Windows, and MAC).
- Proficient with container systems like Docker and container orchestration like EC2 Container Service and Kubernetes, and worked with Terraform.
- Experience in assigning the Azure services on locations specific to integrate with web-apps and key-vaults

- Proficient in the AWS Cloud platform and its features, which include EC2, VPC, EBS, CloudWatch, Cloud Trail, Cloud Formation, Cloud Front, IAM, S3, Route 53, SNS, SQS.
- Managed Docker orchestration and Docker containerization using Kubernetes.
- Experience in working on Docker and Vagrant for different infrastructure setup and testing of code.
- Experience setting up the build and deployment automation for Terraform scripts using Jenkins
- Implemented microservices, application development, and migration using AWS/Azure services such as Azure DevOps, Kubernetes Service (AKS), Container Registry, Cosmos DB, Grafana, Azure pipelines, Monitor, RBAC, AWS Kubernetes EKS, and Kubernetes API to run workloads on EKS Clusters.
- Used Kubernetes to orchestrate the deployment, scaling, and management of Docker Containers.
- Used Terraform scripts to Automate Instances for Manual Instances that were launched before.
- Worked extensively with Ansible that automates Cloud provisioning, Configuration management, application deployment, Intra-service orchestration, and many other IT needs.
- Hands-on experience in Grafana, Splunk, Prometheus, cloud watch
- Worked on shell/python scripts & implemented auto deployment process and reduced the amount of time.
- Experience in Python, Bash/Shell, Ruby, Perl, PowerShell, JSON, YAML, and Groovy.
- Major focus on Configuration, SCM, Build/Release Management, Infrastructure as a code (IAC), and Azure DevOps operations Production and cross-platform environments.
- Skilled in writing Ansible playbooks for various packages. Implemented environments, roles, and data bags for better environment management.
- Knowledge of Java Lambda Expressions to retrieve the data from Collections using Functional Interfaces.
- Involved in using Terraform to migrate legacy and monolithic systems to Amazon Web Services.
- Administrator and Architect of Cloud platforms (AWS)
- Proficient in using Unix Commands and utilities to monitor server-side activities and performance.
- Experience in converting existing modules that had version conflicts to utilize cloud formation during Terraform deployments to enable more control or missing capabilities.
- Experience on Azure Site Recovery and Azure Backup: Installed and configured the Azure Backup agent and virtual machine backup, Enabled Azure Virtual machine backup from the Vault and configured the Azure Site Recovery (ASR).
- Experience in branching, tagging, and maintaining the version across the environments using SCM tools like Subversion (SVN), Git, Bitbucket, and GitHub on UNIX and Windows environment.
- Performed configuration, deployment, and support of cloud services, including Amazon Web Services (AWS).
- Expertise in working with diverse Database platforms for installing, configuring, and managing NoSQL and RDBMS tools like MYSQL, Oracle, DynamoDB, and MongoDB.
- Provisioned the highly available EC2 Instances using Terraform and cloud formation and wrote new plugins to support new functionality in Terraform.

- Worked on various network protocols like HTTP, UDP, FTP, TCP/IP, SMTP, SSH, SFTP & DNS and technologies like load balancers (ELB), ACL, and Firewalls.
- Experienced with handling production incidents, queries, and problems through the remedy ticketing system and production issues/tasks/incidents through the JIRA ticketing system
- Good understanding of web and application servers like Apache Tomcat, WebSphere, and Nginx.
- Used build tools like Maven, ANT, and Gradle for the building of deployable artifacts from source code.
- Experience in building and deploying Java & SOA applications and troubleshooting the build and deploy failures.
- Proficient with Terraform Configuration files to spin up the infrastructure very easily and efficiently.
- Managed the deployment of virtual storage, sites, and server infrastructure to augment clients' data centers by Agile.
- Experienced using different log monitoring tools like Splunk, Nagios, and ELK (Elastic search, Logstash, Kibana) to see logs information, monitor, and get health & security notifications from nodes.
- SAP hybris integration with ERP/CRM through data hub

TECHNICAL SKILLS

- **Cloud Technologies:** AWS, Azure
- **Build Automation:** Chef, Puppet, Docker, CI/CD, Jenkins, Ansible, Bamboo, Kickstart, Jumpstart, Terraform, Kubernetes, ANT, Maven, and SonarQube.
- **Scripting Languages:** Ruby, Python, Perl, HTML5, PHP, Bash/shell Scripting, PowerShell Scripting YAML, and JSON.
- **Monitoring Tools:** Nagios, Splunk, Elastic Search, ELK, Cloud Watch, Dynatrace, and Grafana.
- **Operating Systems:** Red Hat Linux 4/5/6/7, CentOS, Fedora, SUSE LINUX, UNIX, Windows servers [2003, 2008, 2008 R2, 2012, 2012R2], Windows 2000/2003/XP/vista/7/8/10, Ubuntu 12/13/14, Sun Solaris 8/9/10/11, HP-UX 10.x/11.x
- **Networking:** Load balancers, TCP/IP, HTTP/HTTPS, SNMP, NFS, FTP, SFTP, Telnet, SSH, and SSL
- **Versioning Tools/SCM:** GIT, GitHub, Bitbucket, Subversion.
- **Web/Application servers:** Apache, Tomcat, WebSphere, WebLogic (8,9,10)

Certifications

- AWS Certified Developer –Associate.
- Azure Administration Certified Developer
- Certified Kubernetes Administrator.

Professional Experience:

Client: Cox Automotive, Dallas, TX

Aug

2023 - Present

Role: Senior DevOps Engineer

Responsibilities:

- Worked on Azure Data Factory to integrate data of both on-prem (MY SQL, Cassandra) and cloud (Blob storage) and applied transformations to load back to Azure Synapse.
- Managed, configured, and scheduled resources across the cluster using Kubernetes Service.
- Monitored Spark cluster using Log Analytics and Ambari Web UI. Transitioned log storage from Cassandra to Azure SQL Datawarehouse and improved the query performance.
- Involved in developing data ingestion pipelines on Azure HDInsight Spark cluster using Azure Data Factory and Spark SQL. Also Worked with Cosmos DB (SQL API and Mongo API).
- Develop dashboards and visualizations to help business users analyze data and provide insight to upper management, focusing on Microsoft products like SQL Server Reporting Services (SSRS) and Power BI.
- Performed the migration of large data sets to Databricks (Spark), created and administered cluster, loaded data, configured data pipelines, and loaded data from ADLS Gen2 to Databricks using ADF pipelines.
- Created various pipelines to load the data from the Azure data lake into Staging SQLDB and followed by to Azure SQL DB
- Created Databrick notebooks to streamline and curate the data for various business use cases and also mounted blob storage on Databrick.
- Utilized Azure Logic Apps to build workflows to schedule and automate batch jobs by integrating apps, ADF pipelines, and other services like HTTP requests, email triggers, etc.
- Worked extensively on Azure data factory, including data transformations, Integration Runtimes, Azure Key Vaults, Triggers, and migrating data factory pipelines to higher environments using ARM Templates.
- Ingested data in mini-batches and performed RDD transformations on those mini-batches of data by using Spark Streaming to perform streaming analytics in Data bricks.
- Experience in building web applications using Spring Framework features like Spring Boot, MVC (Model View Controller), AOP (Aspect Oriented Programming), Inversion Of Control (Dependency Injection), DAO (Data Access Object), and template classes.
- Performed application migration to Docker and containers for various projects and established the use of Blue/Green Deployments, Load Balancers, and AWS EC2 spot instances.
- Strong development and design experience with various Java and JEE frameworks like Spring, Spring boot, Groovy, Grails, JAX-RS, JAX-WS, Apache CXF, Jersey, Apache Axis, JPA, Hibernate, MyBatis, Struts, JSF, EJB 3.1, EJB 2.1, and JMS.
- Experienced in developing Ansible roles and Ansible Playbooks for the server configuration.
- Experience in working with GIT to store the code and integrate it to Ansible Tower to deploy the playbook.

- Experienced in using Tomcat, JBOSS, WebLogic, and WebSphere Application servers for deployment.
- Expertise in Querying RDBMS such as Oracle, MySQL and SQL Server by using PL/SQL for data integrity and proficient in multiple databases like MongoDB, Cassandra, MySQL, ORACLE.

Environment: Azure SQL DW, Databrick, Azure Synapse, Cosmos DB, ADF, SSRS, Power BI, Azure Data Lake, ARM, Azure HDInsight, Blob storage, Apache Spark.

Client: Bank Of America, San Francisco, CA
2023

Jan 2021 – Aug

Role: DevOps Engineer

Responsibilities:

- Managed Azure Security groups using Azure Portal and PowerShell scripts and attached them to VM's and Subnets
- Docker environments created and maintained for containerized micro services-oriented environments and for hosting images configured private container registry on Microsoft Azure by creating Docker files.
- Created and managed pods. Migrated Micro service-based applications from Virtual Machines to Docker containers and Docker registry
- Data from On-Premises SQL Database servers to Azure SQL Database servers was sent by designing the Azure Data Factory Pipelines using the Azure Data Factory Copy tool and Self-Hosted Runtimes.
- Configured Azure web apps, Azure App Services, Azure Application insights, Azure Application gateway, Azure DNS, Azure Databricks, Azure Traffic manager, App services, Analyzing Azure Networks with Azure Network Watcher, Azure stack, Azure Backup, and Azure Automation.
- Implemented high availability with Azure Classic and Azure Resource Manager deployment models.
- Designed user-defined routes with custom route tables for specific cases to force tunneling to the Internet via an On-premises network and control the use of virtual appliances in the customer's Azure environment.
- Responsible for implementing containerized based applications on Azure Kubernetes by using Azure Kubernetes service (AKS), Kubernetes Clusters.
- Understand the latest features (Azure DevOps, OMS, NSG Rules, etc.) introduced by Microsoft Azure and utilized it for existing business applications
- Code repository, code merge, and quality checks with Bitbucket.
- Worked with various Azure services like Web Roles, Worker Roles, Azure Websites, Caching, SQL Azure, Net worker services, API Management, Active Directory (AD) services infrastructure in advocating, maintaining and monitoring and Azure Active Directory (AAD) infrastructure, incorporated with periodic auditing, troubleshooting and performance.

- Created Azure services using ARM templates (JSON) and ensured no changes in the present infrastructure while doing incremental deployment.
- Create a Virtual Network on Windows Azure to connect all the servers.
- Configuring Fortify Static code analysis on Azure DevOps/Jenkins jobs in dev and test.
- Configuring Azure Key Vault services to development teams for handling secrets in test and production environments using both UI and CLI in Jenkin jobs.
- Implemented Jenkins pipelines into Azure pipelines to drive all micro services builds out to the Docker registry and then deployed to Kubernetes, Created Pods, and managed using AKS.
- Created and managed Kubernetes Pods, Services, ConfigMaps, Deployments.
- Developed automation of Kubernetes clusters with Ansible, writing playbooks with YAML Scripting. Used Ansible and Ansible Tower as configuration management tools to automate repetitive tasks, patching, and software deployment
- Used Maven Build tool & wrote pom.xml in MAVEN project and updated dependencies and plugins with Bamboo.
- Used Bamboo to configure various Corn jobs and continuous integration by merging code into the Bit bucket central repository and used CI server Bamboo to build and validate code with a series of automated tests.
- Developed Terraform scripts to build, change, and version infrastructure as code.
- Worked in Agile Environment
- Coordinated with the Project Management, Development, and QA Team in resolving any configuration and deployment issues to provide a smooth release process.

Environments: Microsoft Azure (Including ASP, VNETs Web & Mobile, Blobs, Resource groups, Key Vault, Azure SQL, CouchDB, RabbitMQ), Bitbucket, Ansible, Docker, Kubernetes, Bamboo, Maven, Nexus, Terraform, .Net, Rally, Nagios, PowerShell.

Client: State Of Michigan

Apr

2018 – Jan 2021

Role: DevOps Engineer

Responsibilities:

- Maintained and Administered GIT Source Code Tool.
- Created Branches and labels and performed Merges in Stash and GIT.
- Developed Processes, Tools, Automation for Jenkins based Software for Build system and delivering SW Builds.
- Managed and developed Puppet modules responsible for deploying AWS
- Managed Servers and Reports using Puppet through host groups and puppet modules and manifests.
- Integrated GIT into Jenkins to automate the code check-out process.
- Onboarded new nova compute hypervisors with checks ensuring their health before enabling them.

- Created VM snapshots using nova and glance to back up application state into glance images periodically. Implemented the application using Jakarta Struts Framework, which is based on the Model View Controller design pattern.
- Setting up build server for continuous integration with Jenkins for daily/nightly and weekly based builds. Communicating with Development teams in advance for all PRODUCTION releases planned.
- Designed the Release Plans while coordinating with Stakeholders, including Project Management Lead, Development Lead, and QA Team Lead.
- Used STRUTS 2 tags for front-end application development.
- Experienced working with Ansible tower. Integrating Ansible tower with Jenkins to deploy code to different servers.
- Installed and configured Apache and supported it on Linux production servers
- Worked with different Ansible playbooks and maintained different Ansible roles.
- Creating Ansible roles using YAML such as tasks, variables, files, handlers, template and writing playbook for that role.
- Create a new EC2 instance to meet high availability application architecture and security parameters
- Create AWS instance via Jenkins with EC2 plugin and integrate nodes in Ansible and Integrating AWS S3 bucket with Jenkins for backup of code
- Provide highly durable and available data by using S3 data store, versioning, lifecycle policies, and create AMIs for mission critical production servers for backup.
- Used Ansible server and workstation to manage and configure nodes.
- Tracking JIRA tool for live defects and change requests.
- Integrated crucible with Jira.
- Used Struts framework to generate Forms and actions for validating the user request data.
- Creating the complete setup with the core network running on another machine.
- Implementation of code for several modules.
- Debugging the issues reported from various stakeholders.

Environment: Struts 1.x / 2.0, Ajax, JSP, JNLP, Hibernate, YUI, My SQL, NetBeans IDE 6.5, Tomcat 6.5 Web Logic Server 9, Quality Center, Mercury QTP, Load runner, Java, XML, JSP, Web Service, Java Mail 1.3, Java Script, DB2, Web sphere, Windows XP/Vista, Linux.

Client: UNITED HEALTH GROUP, MINNESOTA.

Jun

2016 – Apr 2018

Role: DevOps Cloud Engineer

Responsibilities:

- Implement proof of concepts to validate cloud concepts, architecture, and requirements
- Setting up Virtual networks for the creation of Virtual machines. Managing Azure subscription

- Configuration of Site-to-Site VPN for communication of multiple VNets and point-to-site configuration for remote users.
- Defined cloud network architecture using Azure virtual networks, VPN, and express route to establish connectivity between on-premises and cloud
- Configure the appropriate VMs, storage, and network in Azure to support the customer workloads moving to Azure. Installing and configuring different Tiers of Virtual machines for different Project needs
- Configuration of Availability Sets for redundancy.
- Creation of Standard and Premium Storage accounts as per requirement. SKU upgradation. Configure File shares for backup
- Creating Backup Vaults for backing up data on the Cloud and creating backup Plans for backing up entire Virtual Machines on the Cloud. Automating regular Azure activities with the help of Azure PowerShell
- Setting up and configurations of different load balancer technologies (Public/Private load balancers)
- Creating New Subscriptions, adding resource groups, and providing permissions to respective Groups
- Deployed Azure IaaS virtual machines (VMs) and Cloud services (PaaS role instances) into secure VNets and Subnets
- Providing and ensuring high availability for IaaS VM instances and PaaS instances
- Designed VNets and subscriptions to conform to Azure Network Limits
- Good background in Azure infra designing/implementing and providing solutions
- Work with teams to implement Azure Cloud Services/ Azure App Service solutions to customers
- Implementing and configuring NSG and Availability Set
- Good Technical research and troubleshooting on Azure infrastructure
- Implementing and Configuring an Automation Script for Azure VMs for Shutdown and Start Up
- Implementing and configuring Point-to-Site VPN tunnels for Hybrid Cloud Solutions.

Environment: VNets, Azure PowerShell, Azure IaaS virtual machines (VMs), Azure Cloud Services, NSG, Azure App Service

Client: DaVita Healthcare, Los Angeles, CA

Feb 2015 – Jun

2016

Role: Build and Release Engineer

Responsibilities:

- Installed and configured Red Hat Linux, Established and scheduled activities in test and production environments.
- Experience in working GIT for branching, tagging, and merging.
- Managed, installed, and configured Microsoft Windows Server, Red Hat Enterprise Linux, CentOS, Ubuntu, IIS, .NET, Apache, Oracle WebLogic, Red Hat JBoss, Apache Tomcat, and Oracle Database.
- Worked closely with application developers to devise robust deployment, operating, monitoring, and reporting for the COTS applications.
- Deployment, implementation of Subversion (SVN) as source control, collaboration and QA tool. Project management, versioning, and blame/issue tracking using Subversion (SVN).
- Created Build Jobs and Deployments in Jenkins.
- Involved in writing and organizing Shell and Perl scripting for building complex software systems.
- Experience with defining and creating usable and customer-friendly, intuitive interfaces to the JIRA tool in a fast-paced evolving environment.
- Migrated source control tool from Clear Case to Subversion (SVN) and build tool from Ant to Maven.
- Worked closely with the team to review code for compatibility issues.
- Created scripts for backing up and restoring Subversion (SVN) repositories.
- Used Maven as a dependency management tool to manage all the dependencies that are required.
- Created and configured jobs, script builder, custom command builder, and agents in Bamboo.
- Deployed the EARs and WARs in JBOSS Application server using ANT script.
- Configured Git with Jenkins and scheduled jobs using Poll SCM option.
- Implemented Jira with Maven release plug-in for tracking bugs and defects.
- Experienced with release engineering and configuration management in Tomcat web application environment.
- Created ANT and Maven POMs to automate the build process and integrated them with tools like Sonar, Nexus.
- Run release for all lower and production environments for almost forty different applications with various deployment tools Jenkins and bamboo and worked closely with system engineers to resolve the issue.

Environment: Subversion (SVN), GIT, Ant, Maven, Bamboo, Sonar, Jenkins, JBOSS, Perl Scripts, Shell Scripts, Bash Scripting, Nexus, Jira, Apache Tomcat, Oracle Database, UNIX/LINUX.
