

RAMESH BOLLU

Mobile: - (510-586-8138).

Email: - bolluramesh@gmail.com

SUMMARY:

- 18+ years of experience in Analysis, designing, building, modernizing and Migration of Distributed, Object Oriented, Scalable, Web and Mobile applications using Java/J2EE and cloud-based technologies.
- Experience in developing, fine-tuning, and deploying **GEN AI applications** for natural language processing models. **Developed a chatbot called IVA (Integrated Virtual Assistant) to provide the order processing details in Autodesk using python script and frameworks open AI APIs and Amazon bedrock service.**
- Extensive knowledge of middleware development, client/server application development, software process improvement, and object-oriented design and development.
- Expertise in development and running cloud applications on platforms **like Docker, Pivotal Cloud Foundry (PAAS), Azure, AWS** and developing Micro services.
- Expertise in providing solutions for service oriented, tired architecture, micro service-oriented architectures.
- Design a building micro service in serverless architecture using **AWS Lambda** functions.
- Development and provision of cloud infrastructure using **Terraform** and cloud formation tools.
- Expert in writing programs using Python for AWS cloud services.
- Transformed a legacy application into suite of cloud-hosted Micro services using **PCF, AWS, Azure**, spring boot.
- Experience in Container orchestration using **Kubernetes** with Cluster deployment, Pod management, Deployment strategies (Rolling updates, Blue-Green deployments), Service discovery and Load balancing, Persistent Volumes and Persistent Volume Claims (PVCs), Kubernetes Networking (Services, Ingress, Network Policies), Kubernetes Operators, etc.
- Managing **helm charts** for containerized applications within repo for parameterization, and configuration management to support multi-environment deployments.
- Experience in designing, implementing, and maintaining **Kafka** clusters, topics, partitions, and brokers.
- Design and development real-time streaming applications using **Kafka** as streaming platform.
- Caching the large datasets, distributed locking for race condition scenarios using Redis tool.
- Experience in creating dashboards and optimizing queries for application logs using **SPLUNK**.
- Experience in developing batch jobs using spring batch and schedulers for ETL operations.
- Externalizing the application configuration (properties) into central place on web using spring cloud config framework.
- Writing optimized **GraphQL** queries to fetch the required data, aggregating data, versioning and without knowing the backend implementation and its technology.
- Worked in Agile framework, collaborating with business teams in user stories grooming, acceptance criteria and performance metrics.
- Strong experience in using JIRA for project management, especially managing Sprint user stories and bug tracking.

- Expertise in J2EE Application development using JDBC, Servlets, JSP, Web Services (JAX-WS, REST (JAX-RS), Spring Framework, Stripes Framework, Hibernate (JPA implementation), AKKA, JAIN-SIP, GCM, APNS.
- In-Depth Hands-on programming developing Rich & high-end user interfaces using web languages like HTML, XML, XPATH, CSS & Bootstrap and scripting language like Typescript, JavaScript, jQuery, Angular-14.x, React-17.x, Node.js, Grunt, Jasmine & Karma.
- Experience in Web Logic Application Server, WebSphere Server V 6.1, 8.x, Tomcat & Jetty Web Servers and JBoss-4.2 server.
- Experience in configuring Software Management Systems like VSS, Smart CVS, Perforce, Tortoise SVN, SOS, Subclipse GitHub and GitLab.
- Experience in Continuous Integration & Delivery methodologies using Jenkins & GitLab CI/CD (Pipelines, jobs, schedules).
- Participated in Project Requirement, Vendor Evaluation and Planning with customers.
- Extensive Knowledge of implementation of application protocols HTTP, SIP, AKKA using middleware frameworks.
- Strong Experience in Developing Middleware applications to send ALERTS and NOTIFICATIONS to Android and Apple Devices.

Technical Skills:

Programming Languages/Scripting: Java, Java 8 ,11 & 17, Groovy, JavaScript, Typescript, Nodejs, Python, Groovy, Scala, Go

Front-End-Frameworks: jQuery, AngularJS= 1& 2+, ReactJS, ExtJS, HTML, CSS3, Bootstrap CSS.

Back-End-Frameworks: Spring, Spring Boot, Spring Cloud, & NodeJS

Documentation: Swagger/ SpringDOC Open API.

Generative AI: Amazon Bedrock, Open AI models integration.

Web Services: JAX-WS (Apache CXF, Axis, SOAP, WSDL, XML, JAXB, JAXP) and
JAX-RS (Spring RESTful Services/Jersey)

J2EE: Servlets, JSP, JSTL, EJB, JAXB, JMS, JAXP, JPA, Thymeleaf

Persistence: JDBC, JPA 2.0, Hibernate, Spring Data JPA

Security Framework: OAUTH-2, SAML, Spring security, JWT

Integration: Spring Integration, Apache Camel,

JMS/Messaging: Apache Kafka, AWS SQS, SNS, EvenBridge, IBM MQ, RabbitMQ, Firebase

Cloud Services/Container AWS stack of services, Azure, Docker, Kubernetes, PCF

Database Servers: MSSQL, Oracle, PostgreSQL MongoDB, DynamoDB & Cosmos DB

Application/Web Servers: Cloud containers, Weblogic, WebSphere, Tomcat, JBoss and Serverless

Microservices Management tools: Ribbon, Eurkea, Zuul, Hystrix & Spring Cloud

AWS Services:	Lambda, S3, API Gateway, ALB, NLB, SQS, SNS, DynamoDB, EKS, ECS, Fargate, Elastic Cache, EC2, CloudFront, VPC, Security groups, CloudWatch, Kinesis data streams, data fire hose & EvenBridge.
AWS Infrastructure Tools:	CloudFormation & Terraform, Jenkins
Azure Services:	Application service, AKS, Cosmos DB, Functions, Cosmos DB, Redis Cache, APIM & Application Insights.
Testing tools:	JUnit, Mockito, Power Mock, UI testing (Jasmine, Karma, Grunt), Cucumber, Karate, Mocha, Chai
Caching framework	Redis, , EHCache, OS Cache, AWS Dynamo DAX
ETL/Data Processing	Spark, AWS Glue, AWS Athena
Bigdata	HDFS, MapReduce, Hive, Spark, Kafka, Zookeeper
Version Control:	GIT (Gitlab, GitHub, Bitbucket), SVN, Perforce, CVS
Log Management tools:	ELK, Splunk, Datadog
DevOps (CI&CD), tools:	Maven, Gradle; CloudFormation/SAM Template, Terraform, Jenkins, GitLab, Grunt, Sonar, Docker, Kubernetes manifest, Argo CD
IDE:	IBM RAD, Eclipse and IntelliJ IDEA (Have personal License) & Visual Studio.
Methodologies	Agile (SCRUM), Waterfall Model

Certifications:

Oracle Certified Associate, Java SE 7 Programmer

AWS Certified Solutions Architect – Associate (SAA-C03)

EDUCATION:

University of Osmania

Master of Computer Science

EXPERIENCE:

Autodesk, Remote
AWS Cloud Engineer

01/2023 to current

Project: Core Finance Integrations (CFS)

The Core Finance Integrations are middleware services providing APIs to the clients to manage the customer orders, Billings and payments. These APIs are developed using AWS Lambda functions and micro services. The Pelican front-end system allows the customers to subscribe to SAAS based products. Based on subscription period, invoices will be generated yearly.

This Core Finance System enables the customer to perform the following activities.

- 1) Creating subscription-based orders.
- 2) Fetching invoices.
- 3) Making payments yearly.
- 4) Credit checks for the customer.
- 5) Refunding of invoices amount.

Responsibilities:

- Involved in discussions for business requirements with product owners.
- Designing the CFS requirements technically and functionally.
- Developing the different service APIs and deployment management tools.
- Design and development of the AWS Cloud native Micro-Service applications using spring (boot, cloud-config, cloud gateway, load balancer, eureka) and AWS Cloud services and Kafka.
- Designing the Event-Driven architectures
- Configuring, deploying, scaling, and running all the micro services applications on the Docker container using **Kubernetes**.
- Configured AWS EKS as a Kubernetes cluster.
- Creating and managing **helm charts** to streamline application packaging and deployment in Kubernetes environments.
- **Helm chart** templating, parameterization, and configuration management to support multi-environment deployments.
- Using Amazon MSK (**KAFKA**) for implementing the streaming applications, configuring the topics and its attributes
- Design and Development of **AWS Lambda functions** with required concurrencies in serverless fashion.
- Configured **AWS EKS** as a Kubernetes cluster.
- Defined **Terraform templates** to provision the AWS services.
- Defined the automatic deployment pipelines to deploy the infrastructure through **Terraform**.
- Defined the enterprise level security configurations for each service in **Terraform** configurations.
- Defined the **Terraform** scripts for IAM roles and policies.
- Managed **Terraform state files** in AWS S3.
- Created alerts and respective actions for each micro service and lambda functions considering performance metrics like success, failure rates and processed orders.
- Implemented structure for managing the **Terraform** components and modules.
- Creating the Splunk dashboards for monitoring and analyzing the services data.

- Implementing the tracing using Open Telemetry Developing the Lambda functions using serverless framework to generate the infrastructure code using CloudFormation tool.
- Developed highly interactive rich single page interfaces using Angular and typescript.

Environment:

Programming Languages: - Java-8 & 11, JavaScript, Typescript.

Front-end scripting: - React, GraphQL, Typescript, JavaScript, HTML, CSS.

Java Frameworks: - spring-boot-3.X, spring-cloud-Hoxton, spring-cloud-config-2.1.12, spring-cloud-gateway, spring-cloud-netflix-2.0.0.4, spring-cloud-load-balancer, spring-cloud-eureka-1.4.4., Spring- 5.0.9 (CORE, MVC, ORM, ASP, DAO, SECURITY), Servlets2.4, XML, XPATH, JAXB, XSD, XSLT.

Integration framework: - Apache Camel, Kafka, ActiveMQ.

Cloud Platform: - AWS & Azure

AWS Services: - IAM, EC2, Dynamo DB, S3, ELB, Route53, Elastic Container Service (ECS), EKS (Elastic Kubernetes Service), Event Bridge, Lambda functions, System Manager, SQS, SNS and CloudWatch

Azure Services: - Azure cosmos DB, Azure blob storage, Azure functions, Azure API.

Serverless lambda functions.

ORM tools: - Hibernate- 6.0.12, (JPA-2.1 Specification).

Web Services: - Restful & SOAP Web Services.

Testing API: - Spring Testing framework, Mockito, Junit Tests.

Restful Web Service Testing: Rest Assured

JavaScript Libraries: - Angular, Node.js, Grunt, Jasmine, Karma.

Caching tools: Redis

Source Version Control: - AWS code commit, Git,

Data formats: - JSON, XML, Plain text.

Web Programming: - HTML, CSS, bootstrap.

Web Servers: - Jersey, Tomcat, reactor Netty.

Build Tools: - Gradle, Maven.

Logging: Logback.

Log Monitoring Tool: Splunk.

Open API Specification: Swagger2, OpenApi-3.0.

CI/CD: (Terraform scripts)

Infrastructure Tool: Terraform

Containerization: - Docker.

Container Orchestration: - Kubernetes.

Streaming Platform: Kafka

Databases: - AWS Dynamo DB, MS SQL server,

IDE Tools: - IntelliJ, Eclipse

Software Development Methodology: Agile with 2 weeks sprints.

Pfizer, Remote

01/2022 to 12/2022

AWS Cloud Solutions Architect

Project: MDE (Manufacturing Data Enablement)

The MDE (Manufacturing Data Enablement) system provides process data for every manufacturing site.

It digitalizes the process of collecting underlying multiple pipelines tasks data and sharing with site manufactures to measure and analyze the process details and take appropriate actions.

This System is a collection of multiple applications they run under different platforms to process the data and collect them and share them with site admins.

Responsibilities:

- Involved in discussions about projecting the scope of the business requirements with product owners.
- Designing the MDE requirements technically and functionally.
- Developing Multi channel framework to create the number of routes for automation of collection the data, processing it and loading into respective systems.
- Design and Developing the Cloud native Micro-Service applications using spring (boot, cloud, cloud gateway, load balancer, eureka) and AWS Cloud services and **Kafka (AWS MSK)**.
- Defined the **Terraform** scripts for multiple integration services for their infrastructure and security.
- Following the Agile scrum methodology for daily tasks collaboration (with 2 weeks sprint).
- Managing the source code and application builds using AWS code commit work-flow mechanism.
- Configuring, deploying, scaling, and running all the micro services applications on the Docker container using Kubernetes.
- Configured AWS EKS as a Kubernetes cluster.
- Developed highly interactive rich single page interfaces using Angular and typescript.

Environment:

Programming Languages: - Java-8 & 11, JavaScript, Typescript.

Front-end scripting: - React, GraphQL, Typescript, JavaScript, HTML, CSS.

Java Frameworks: - spring-boot-2.4.X, spring-cloud-2.1.5, spring-cloud-config-2.1.12, spring-cloud-gateway, spring-cloud-netflix-2.0.0.4, spring-cloud-load-balancer, spring-cloud-eureka-1.4.4., Spring- 5.0.9 (CORE, MVC, ORM, ASP, DAO, SECURITY), Servlets2.4, XML, XPATH, JAXB, XSD, XSLT.

Integration framework: - Apache Camel, Kafka, ActiveMQ.

Cloud Platform: - AWS & Azure

AWS Services: - IAM, EC2, Dynamo DB, S3, ElastiCache, ELB, Route53, Elastic Container Service (ECS), EKS (Elastic Kubernetes Service), Serverless lambda functions.

Azure Services: - Azure AD, Azure cosmos DB, Azure blob storage, Azure functions, Azure API, Azure Key-vault, Azure AKS, Azure Spring apps, Azure Cache for Redis.

ORM tools: - Hibernate- 6.0.12, (JPA-2.1 Specification).

Web Services: - Restful & SOAP Web Services.

Testing API: - Spring Testing framework, Mockito, JUnit.

Restful Web Service Testing: Rest Assured

JavaScript Libraries: - Angular, Node.js, Grunt, Jasmine, Karma.

Source Version Control: - AWS code commit, Git,

Data formats: - JSON, XML, Plain text.

Web Programming: - HTML, CSS, bootstrap.

Web Servers: - Jersey, Tomcat, reactor Netty.

Build Tools: - Gradle, Maven.

Logging: Logback.

Log Monitoring Tool: Splunk.

Open API Specification: Swagger2, OpenApi-3.0.

CI/CD: (Terraform scripts)

Containerization: - Docker.

Container Orchestration: - Kubernetes.

Streaming Platform: Kafka

Databases: - AWS Dynamo DB, MS Sql server,

IDE Tools: - IntelliJ, Eclipse

Software Development Methodology: Agile with 2 weeks sprints.

Lead Application Architect/Developer

Small Group Business Center (SGBC)

The Policy Supervisor, who uses this SGBC (also known as Customer Record) to create the policies for the small group customers with size 2-100 employees, Basically, the business sales team initiates the policy creation activity with the help of salesforce workflow management system by providing basic group information. The customer record receives that group creation information and makes it available to the policy supervisor to create the policies for that group. In order to create that group, administrator needs to create the group accounts, policies, and certificates with plans for the covered products. Once policies created for that group, the entire group information will be sent to GIAS, which is policy maker system and share the policy details with the end customer.

- Involved in determining the scope of the requirements with product owners.
- Designing the SGBC requirements technically and functionally.
- Building the single page application for groups, accounts, policies, certificates and plans rich user interfaces.
- Design and Developing the Cloud native micro-Service applications using spring (boot, cloud, ribbon, eureka) and PCF (pivotal cloud foundry) and Kafka.
- Migrated on-premises projects to **AWS** cloud environments.
- Following the Agile scrum methodology for daily tasks collaboration (with 2 weeks sprint).
- Managing the source code and application builds using GitLab work-flow mechanism.
- Configuring, deploying, scaling, and running all the micro services applications on the Docker using Kubernetes.
- Developed highly interactive rich single page interfaces using Angular and typescript.

Environment:

Java 1.8, Groovy, JavaScript, Typescript, spring-boot-2.0.5, spring-cloud-2.0.1, spring-cloud-config-2.1.12, spring-cloud-netflix-2.0.04, spring-cloud-ribbon-1.4.4, spring-cloud-eureka-1.4.4., Spring- 5.0.9 (CORE, MVC, ORM, ASP, DAO, SECURITY), Servlets2.4, XML, XPATH, JAXB, XSD, XSLT, Hibernate- 6.0.12, (JPA-2.1 Specification), Restful & SOAP Web Services, Spring Testing framework, Mockito, Junit Pacts, Rest Assured, ReactJS, AngularJS-1.x, Node.js, Grunt, Jasmine, Karma, PCF, Azure, Git, gogs (Go git service)

JSON, XML, Plain text, HTML, CSS, bootstrap, Jersey, Tomcat & Weblogic, Gradle, Maven, Logback, Splunk, CI/CD: Jenkins, **Docker, Kubernetes, Kafka, AWS**

AT&T PLANO, Texas

07/2018 to 02/2019

Lead Architect/ Developer

Integrated Digital Sales Experience (IDSE)

- Participating in scope of the requirements with product owners to prioritize them.
- Providing the optimum Solutions by executing proof of concepts.
- Following the Agile scrum methodology for daily tasks collaboration (with 2 weeks sprint).
- Developing and documenting the RESTful web services using Swagger.
- Design and Developing Micro-Service applications using spring (boot, cloud, ribbon, eureka).
- Programming back-end restful clients for wireless MDS application.
- Managing the source code and application builds using GitLab work-flow mechanism.
- Configuring, deploying, scaling and running all the micro services applications on the Docker using Kubernetes.
- Externalize application properties using spring cloud config across all the environments.
- Developing rich user interface and single page views using ReactJS, Typescript, jQuery, web pack (JavaScript module bundler), html and CSS.
- Developed highly interactive rich single page interfaces using Angular and typescript.

Environment:

Java 1.8, Groovy, JavaScript, Typescript, spring-boot-2.0.5, spring-cloud-2.0.1, spring-cloud-config-2.1.12, spring-cloud-netflix-2.0.04, spring-cloud-ribbon-1.4.4, spring-cloud-eureka-1.4.4., Spring- 5.0.9 (CORE,

MVC, ORM, ASP, DAO, SECURITY), Servlets2.4, XML, XPATH, JAXB, XSD, XSLT, Hibernate- 6.0.12, (JPA-2.1 Specification), Restful & SOAP Web Services, Spring Testing framework , Mockito, Junit Pacts, Rest Assured, React, AngularJs-1.x, Node.js, Grunt, Jasmine, Karma, PCF, Azure, Git, gogs (Go git service) JSON, XML, Plan text, HTML, CSS, bootstrap, Jersey, Tomcat & Weblogic, Gradle, Maven, Logback, Splunk, CI/CD: Jenkins, Docker, Kubernetes, Kafka

AIG FORT WORTH, Texas

11/2017 to 07/2018

Application Architect/ Developer

Network and Branch Automation

- Gathering the requirements from the business and translating them into web and standalone solutions.
- Daily interacting with architect team to choose the optimized methodology to design and develop the programs.
- Following the Agile scrum methodology for daily tasks collaboration (with 2 weeks sprint).
- Using Jhipster to generate the application code for the front-end and back-end.
- Developing and documenting the RESTful web services using Swagger.
- Design and Developing Micro-Service applications using spring (boot, cloud, ribbon, eureka).
- Programming back-end restful clients for Netbrain and Netdata micro services using spring cloud, spring MVC and Oauth2 authentication mechanism.
- Using Mapstruct to implement the mapping between entities and dtos.
- Programming ETL batch jobs using spring batch and schedulers to feed the netdata application database from different sources.
- Managing the source code and application builds using GitLab work-flow mechanism.
- Configuring, deploying and running all the micro services applications on Docker.
- Externalize application properties using spring cloud config across all the environments.
- Developing rich user interface and single page views using AngularJS, Typescript, JQuery, web pack (JavaScript module bundler), html and css.

Environment: Java 1.8, Docker, JHipster-1.1.5, Swagger, feign-httpclient-9.6.0, Hystrix, Mapstruct, spring-boot-1.5.12, spring-batch-3.0.7, spring-data-jpa-1.5.12, spring-boot-devtools-1.5.12, spring-cloud-1.2.4, spring-cloud-config, spring-cloud-netflix-1.3.5, Spring- 4.3.16 (CORE, MVC, ORM, ASP, DAO, SECURITY), spring-cloud-ribbon-1.3.5, spring-cloud-eureka-1.3.5, Hibernate- 5.2.12, (JPA-2.1 Specification), Restful & SOAP Web Services, Servlets2.4, XML, XPATH, JAXB, XSD, XSLT, GIT, Logback, JSON, Tomcat-8.5.11, Restful web-services (jax-rs), RSQL(Rest query language) Maven (build tool), Cloud Foundry (PAAS), Docker, Jenkins (Continuous Integration & Delivery), GitLab, MS SQL, Liquibase, AngularJS-4.1.3, JavaScript, Typescript, JQuery, HTML, CSS, Bootstrap, Junit, Node.js, Karma, Jasmine, Grunt.

DEARBORN NATIONAL LIFE INSURANCE (HCSC SUBSIDIARY), Richardson, Texas

02/2017 to 11/2017

Application Architect

Dental Access Pro (Dental Membership, Provider & Claims (DMPC))

- Collect requirements from the business and product owners, architect and design the end-to-end web & mobile solutions.
- Using Agile methodology for software development process and team collaboration.
- As an architect and lead programmer coordinate and collaborate corporate groups to assure our solutions meet their requirements and standards.
- Developing the Micro Services using spring (boot, cloud) by registering them in eureka registry and deploying them on cloud platforms.
- Implement the best practices for web application development and delivery. This includes coding conventions, determining what frameworks to use for each project, and what open source libraries and projects to use.
- Implement the continuous integration systems using Jenkins that we use to manage builds from our code repositories.
- Coding build script using Gradle to improve the application productivity in terms of development and running.
- Configure and Manage source code using GIT by creating no of feature and release branches.
- Configure the cloud services, binding and unbinding them in Cloud Foundry(PAAS) and also running and maintaining the cloud applications in it.
- Externalize application properties using spring cloud config across all the environments.
- Developing rich user interface and single page views using AngularJS, JQuery, html and css.
- Design, develop and consuming restful clients using spring rest templates.

Environment: Java 1.8, Groovy-1, Spring- 4.3.7 (CORE, MVC, ORM, ASP, DAO, SECURITY & JMS), Spring-boot-1.5.2, spring-boot-devtools, spring-cloud-1.2.3, spring-cloud-config, Hibernate- 5.0.12, (JPA-2.1 Specification), Restful & SOAP Web Services, Servlets2.4, CSS, JavaScript, XML, XPATH, JAXB, XSD, XSLT, GIT, Log4j, JSON, Tomcat-8.5.11, Restful web-services (jax-rs), Gradle (build tool), Jenkins (Continuous Integration & Delivery), Git, MySQL, Liquibase, Cloud Foundry (PAAS), AWS, AngularJS-4.1.3, JQuery, HTML, CSS

DEARBORN NATIONAL LIFE INSURANCE (HCSC SUBSIDIARY), Richardson, Texas

09/2016 to 02/2017

Application Architect

Index-Assist

- Design and development of rich user interface using AngularJs jQuery, html and css.
- Programming the Micro Service web applications for high availability of Index-Assist system for the end users to make synchronous changes.
- Design and Coding of back end development (middleware layers - service, Dao and web-services) using spring (web, MVC, boot, security, jax-rs, jax-ws).
- Maintenance of application and bug fixing.

Environment: Java-1.8, spring-4.3.7(CORE, MVC, ORM, ASP, DAO, SECURITY), spring-boot-1.5.2, spring-boot-devtools, spring-cloud-1.2.3, Jetty-8, spring-security-4.2.2, hibernate-5.0.12, jpa-2.1, apache cxf (jax-ws), jaxb-2.1, Gradle (build tool), Jenkins (continuous integration & delivery tool), Git, Sql server, Liquibase, Cloud Foundry (PAAS), AngularJS-1.6.4, 2.0, JQuery, HTML, CSS, Node.js, Karma, Jasmine, Grunt

DEARBORN NATIONAL LIFE INSURANCE (HCSC SUBSIDIARY), Richardson, Texas

09/2014 to 09/2016

Application Architect

Benefit Manager (Web Portal)

- Requirement Analysis for web claims and enrollments.

- Architect and implement the infrastructural code.
- Design the 4-layer security using spring security, LDAP, token identification using certificates and application level.
- Design high-end rich user interface using AngularJS, HTML, Java script and CSS.
- Source code management using Git and Git flow.
- Manage distributed enterprise applications within the clustered environment.
- Configure Jenkins to manage build and deployments.

Environment: Java 1.7, Groovy-1, Spring-4(CORE, MVC, ORM, ASP, DAO, SECURITY, BOOT & JMS), Hibernate (JPA Specification), JMS, Restful & SOAP Web Services, Servlets2.4, CSS, JavaScript, XML, XPATH, JAXB, XSD, XSLT, GIT, Log4j, JSON, Tomcat-7.x, Web sphere-8, SQL server, DB2, Jenkins (Continuous Integration), Junit, AngularJS-1.6.4, 2.0, Node.js, Karma, Jasmine, Grunt, Gradle.

BLUE CROSS BLUE SHIELD (HCSC SUBSIDIARY), Richardson, Texas

12/2012 to

09/2014

Enterprise Architect

TLM (Technology Lifecycle Management)

- Architect TLM requirements.
- Design enterprise level security.
- Create and develop framework API.
- Upgrade enterprise applications to latest framework API.
- Build launch scripts to generate automated source code and tools.
- Manage distributed enterprise applications within the clustered environment.
- Implemented architectural changes to the enterprise level security services.

Environment: Java 1.7, Spring-4(CORE, MVC, ORM, ASP, DAO & Security), Hibernate (JPA Specification), JMS, AngularJS, Restful & SOAP Web Services, Servlets2.4, CSS, JavaScript, XML, XPATH, JAXB, XSD, XSLT, Maven, Log4j, JSON, Tomcat-7.x, Web sphere, SQL server, DB2, Jenkins.

XANS (XFINITY – ALERT AND NOTIFICATION SYSTEM), Comcast, Philadelphia.

06/2012 to 12/2012

Lead Developer

- Designing XANS proxy and Middleware protocol mechanism.
- Architecting the requirements.
- Implementation of subscribing, unsubscribing and get status services for the devices.
- Building the Schema for the Presence Information Data Format (PIDF).
- Preparing the architecture for sending push notifications to Android, Apple and Blackberry devices.
- Handling the Presence SIP requests like SUBSCRIBE, NOTIFY, INVITE.
- Managing the application within distributed environment of multiple clusters.

Environment: Java 1.7, Play Framework, Akka, Jain-SIP, GCM, JPNS, spring 3.0-Core, Restful Web Services, Servlets2.4, CSS, JavaScript, XML, XPATH, JAXB, XSD, XSLT, Maven, Log4j, JSON, Tomcat-7.x, Web sphere, Presence Engine and Cassandra.

Elsevier, Philadelphia
