

Summary

- Having 12 plus years of IT experience in software development which includes strong experience in the Design, Development, Testing, and Distribution of Android Applications for COTS and Non-COTS Android devices.
- Involved in the Design and Development of applications to accept payments from any contactless card or mobile wallet right from their NFC-enabled device.
- Solid understanding of the full Mobile Development Lifecycle with hands-on expertise with a wide variety of Android devices and SDK versions.
- Knowledge of Architectural design patterns: MVVM, MVP, Clean Code, MVI
- Experience in working with Crashlytics, Google Analytics, Firebase Google SDK, Localization, and Push Notifications.
- Strong understanding of Securing Binary Code using White Box Cryptography and Obfuscation Techniques.
- Knowledge on adding Mobile Runtime Application Self-Protection (RASP) features to secure Mobile applications from runtime threats using Dexguard and GaurdIT libraries.
- In-depth knowledge of Android (Java/ Kotlin) technologies.
- Good understanding of Android Push Provisioning API.
- Ability to write and maintain Unit and Integration tests, along with debugging complex code bases.
- If you prefer Google's ecosystem, a wide range of apps, and regular updates, **Android TV** is a good choice.
- Good experience in building POCs on new technologies, strategizing development, and migration activities, and leveraging various tools and technologies for application deployment, monitoring, testing, performance tuning, and security hardening.
- Strong work experience in designing UI using Android Jetpack Libraries.
- Involved in developing A FinTech App with NFC features.
- Communicate directly with business partners to understand their needs and lead them to solutions.

Industry expertise

FinTech | Digital Payments | EMV | Utilities | e-Commerce

Areas of expertise

Mobile Applications | Microservices | Cloud | Agile

Technical specializations

Kotlin | Android | Java | J2EE | DB (SQL & NoSQL) | CI/CD | HSM |

Tech Stack

-Spring Boot | JPA | Security | REST
-Gradle | Maven | Ant
-SQL | NoSQL (Mongo)
-MQ | JMS | Crystal Reports | Apache CXF
-Jenkins | SonarQube
-JMeter | Security Testing | Selenium
-JIRA | Confluence | Bitbucket
-Splunk

Qualifications

B. Tech Information Technology (2004)

Mobile Solutions Architect - VISA Inc 05/2016 – CURRENT

Designed, architected, and led a team of software developers responsible for the design and development of mobile applications for Visa Tap to Phone solution.

VAC TC (Visa Acceptance Cloud Thin Client) is a contactless acceptance solution that enables Android-based COTS devices with native NFC and Non-COTS devices with external readers to process contactless EMV payments. SDK is a lightweight pass-through component that performs card data reading and optional PIN entry processing at the point of interaction. It ensures secure handling and exchange of the Card and Transaction data to/from the VAC backend, which performs the transaction processing.

- Designed and Developed Mobile Payment Acceptance Solutions on **COTS** devices adhering to **MPoC** standards.
- Involved in designing and development of **MPoC SDK** (which implements all core payment-related functions, including their own UI components)
- Establish coding guidelines and architectural best practices for Swift and iOS development.
- Researched and proposed new **Android Architecture** Components including Live Data, View Model and Room Persistence Libraries.
- Involved in designing and development of **MPoC Application** (which implements all core payment-related functions, including their own UI components)
- Unit tested Android Java code using JUnit and **Mockito**.

- Design secure mobile authentication flows using OAuth 2.0 and OIDC standards.
- Implement Threading Management and Asynchronous operations support for sending and receiving data over Bluetooth.
- Implemented new application features in **Kotlin** and MVVM architecture using **LiveData** and Jetpack components in Android.
- Involved in performance tuning of NFC transactions.
- Delivered Android applications with adequate security and built-in multi-layer mobile app protection using **ProGuard**, **Guard IT** libraries.

VCAS (Visa Cross-testing Automation Specification) defines an interface communication between the Robot Controller and the VCAS integrated into SDK. The Robot Controller, developed by Visa-accredited labs, uses the VCAS to communicate with the SDK. The Robot Controller sends function commands to the VCAS and also analyses the return code received from the SDK to determine the next command and process.

- Designed and Developed a SOAP web service application that receives commands from the Robot Controller in the form of SOAP requests.
- Supported backup location using Google Play Services Location API as an alternative to native Android Location Manager.
- Involved in writing Socket programming to communicate to devices over a network.

VDCA (Visa Digital Commerce Application) is a white-labelled card companion app that Issuers can offer under their own branding to enhance the Visa cardholder experience. Client Issuers choose from modular features, including Card ON/OFF controls, transaction alerts, account balance, transaction history, and tokenized contactless payments (Android only).

- Designed and developed multi-module Android apps.
- Involved in developing a scalable secure mobile application code supporting modules to facilitate the development and delivery of mobile applications.
- Involved in architecture migration from MVP to Kotlin based MVVM architecture using lifecycle-aware components like Live Data, View Model, Room, and View Binding.
-
- Involved in writing test cases across multiple features for View Models using KotlinMockk, and Espresso for automated UI and Roboelectric integration testing framework.
- Involved in designing an Instant app module in the VDCA app to enable Push Provisioning.
- Implemented new features and functionality using Kotlin language.

Mobile Application Lead - FISERV (First Data Corporation Inc) **09/2015 – 04/2016**

Designed, architected, and led a team of software developers responsible for the design and development of mobile applications for Money Network Prepaid Card users.

Money Network is an online account management tool for Money Network Prepaid Card Users, where they can manage their money through online Web and Mobile applications.

- Updated Android Mobile AppUI for the Terms and Conditions, Fall Detection Acknowledgement screens, and Device Card View.
- Design and Developed modules for the Money Network application,
- Actively involved in UX design meetings for improvement of the application User experience and features.
- Integrated RESTful API's and third-party libraries to enhance the application functionality.
- Performed Unit testing and System testing of the mobile features.
- Architect mobile SSO (Single Sign-On) across enterprise apps using OIDC.
- Researched and proposed new Android Architecture Components including Live Data, View Model and Room Persistence Libraries.
- Developed and maintained automated test cases in Selenium WebDriver using Java programming language and Junit Framework.
- Used Kotlin as the main code language for the Android application.
- Implemented newer features in Kotlin as well as migrated some existing Java code into Kotlin.
- Created automated testing scripts using Espresso and Junit frameworks to ensure the quality of the application.

Senior Mobile Engineer – AMEX (American Express) **09/2014 – 08/2015**

Designed, architected, and led a team of software developers responsible for the design and development of mobile applications for Money Network Prepaid Card users.

- NF HCE (Nelson Freedom Host Card Emulation) HCE-based Mobile application to pay with your Android Phone at various store locations across AUS.
- SERVE (Nelson Freedom Host Card Emulation) HCE-based Mobile application to pay with your Android Phone at various store locations across US.
- Experience working on automating the application on Android TV and Fire TV platforms.
- AXP The American Express Payment Libraries (AXP) provide a secure, extensible, and scalable way to add functionality to any Wallet provider like Android Pay.
- Implement biometric authentication as a second factor in OIDC flows.
- Collaborated with three other Mobile Software Engineers.
- Design and Developed modules for the Money Network application,
- Collaborated with Software Engineers for the design and development of back-end services.
- Actively involved in UX design meetings for improvement of the application User experience and features.
- Performed Unit testing and System testing of the mobile features.

Senior Mobile Engineer - SYMANTEC **05/2011 – 08/2014**

Norton Zone Cloud Sharing: Mobile application that lets you safely access and share your photos, videos, and documents from smartphones.

Norton Family Parental Control: Norton Family with parental control let you keep an eye on your kid's Android device activities anytime and anywhere.

- Design and Developed modules for the Money Network application,
- Actively involved in UX design meetings for improvement of the application User experience and features.
- Performed Unit testing and System testing of the mobile features.

Senior Associate Projects – LOGITECH

04/2010 – 05/2011

Harmony Remote Android app is to control the Logitech Revue with Google TV and the Harmony Link Devices.

Logitech Help Assistant Application for Logitech Revue with Google TV – Used to find Help and Video articles to Set Up the Logitech Revue

Gesture Based Controller for Google TV (Award Winner Application)- which is used to recognize the hand or body gestures to control the Smart TV's and Google TV.

- Design and Developed modules for the Money Network application,
- Actively involved in UX design meetings for improvement of the application User experience and features.
- Performed Unit testing and System testing of the mobile features.

Senior Associate Projects – COGNIZANT India

04/2008 – 05/2010

Link Together – It is a forum for web developers, Web designers, and other Web professionals.

Straight Line – It is an E-commerce website where consumers can purchase products available online.

BOAT Web portal – Is to provide information and services to Educational Institutions, Industries and Students.

- Crystal Reports Performance Improvements by Optimizing the SQL queries used in the sub-reports.
- Automated the application deployment using shell/batch scripts; Configured the build and deployment pipeline in AnthillPro & Hudson.
- Performed Unit testing and System testing of the mobile features.

Technologies: Java, JSP, JavaScript, Toplink, OC4J, Oracle, Ant, Crystal Reports, Jenkins, AnthillPro, Hudson, SVN
